One of the things I remember most when I got started in Amateur radio at the age of 16, was going down to the Clemson University Amateur club station to see if anyone had opened the door and was working some DX. It was during this time I was studing to get my Novice. Anyway, the club station was located in the basement of one of the buildings on campus. About 50% of the time there would be someone there and you could come in and watch as they operated that Drake line along with a SB-200. They also had a 70 foot tower on a hill with a quad antenna....I could only dream of owning such a setup then....and now.

Anyway, on this particular afternoon there seemed to be alot of people in the shack. I knew most of them, and I asked what was going on. They were working one of the last stations in South Vietnam before the fall. The voice coming from the receiver was clearly American and he was packing up his ham gear. He seemed a little frantic and he had a pile up of what seemed like hundreds of stations. I remember him signing saying "I've got to really go QRT this time! The ham gear is the last to be packed. I guess this will the last station you guys will hear from Vietnam for quite some time! 73s!" He gave his call and went QRT. The usual crys for one more contact followed but after about a minute there was silence both on the frequency and in the shack.

Over the next couple of weeks I watched the news reports of the fall of South Vietnam and woundered if that ham made it out okay. To this day, I don't think I ever heard anything on the bands that sticks with me like that experience.

I second the motion for "super glue". I have a Pavoni with Bakelite handle. Handle broke
and was repaired using the stuff. Handle receives lots of torque so I know it is good.

If the piece didn't break cleanly, I'd expect that "JB Weld" (comes in two tubes with
black white red coloring on package) would work well to fill in the joint areas. I use
it instead of epoxy 90% of the time.

: do the job, you might try to locate some of this stuff. You might be
: able to get it from an industrial supplier.

: Make sure that the surfaces are clean; Loctite recommends alcohol for
: cleaning phenolic.

I'll second Roy's suggestions...and mention that in the local Eagle Hardware I found some Loctite "plastic repair super glue"....it's a kit of gel superglue and an activator/cleaner you put on the surfaces before gluing. This stuff works well...I've fixed plastic eyeglass frames with it successfully, and they typically are not at all easy to get to hold together. Phenolic IS a plastic...it's thermosetting, not thermoplastic.

Another note: if the break is in a place that can be reinforced, try that, too. That is, if it's a flat surface, try putting some fiberglass (either raw glass fiber mat or a small piece of fiberglass-epoxy circuit board substrate) across the break, and glue it down with superglue. I've also fixed broken cylindrical things (like caps for bottles that were important to me) by wrapping tightly with thread or thin steel wire, and burying the wrapping in superglue. If you can find superglue accelerator, that can make life much easier, since with it the glue sets up in seconds, even in fairly thick areas. Otherwise, just be very patient, and don't test areas with your finger! ;-)

HO, HO, HO.

I do think if yo are gonna use alky on the phenolic you shold try to use
anhydrous alky or at least 91% alky. The usual drug-store 70%
rubbing alky is likely to work poorly.

My experience.

To get anhyd alky, we had to buy a doz bottles, but they had 91% on
the shelves.

10. Capacitor choices for re-capping boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-01 00:00:00 UTC
From: Dennis Gibbs <dgibbs@rational.com>
Message-ID: <3613E8D9.27DB@rational.com>
Source record: 97754

Hello everyone,

I'm about to begin electrical restoration of an RCA AR-88LF receiver.
This will include a complete Re-capping and installation of new
resistors
as needed.

Although I have done this to several receivers over the years, I would
like to solicit the opinions of those experienced to determine the best
choice for replacement capacitors.

Can someone tell me which of the following capacitors would be best for
this purpose:

1) SBE Orange Drop Type 715P Polypropylene Film
2) SBE Orange Drop Type PS Polyester Film
3) SBE Orange Drop Type 716P High Performance Polypropylene Film
4) WIMA MKP4 metalized Polypropylene
5) WIMA MKP10 High Reliability Polypropylene
6) NTE MLR Series Mylar/Polyester Film

Choice (3) and (5) above indicate that they are ideal for "High Pulse
Current"
applications. Also, the WIMA capacitors have a wider temperature range
than
the SBE series (up to 100 degrees C vs up to 85 degrees C). In addition
the
WIMA capacitors have a tighter tolerance (5% vs. 10%) than the SBE
capacitors.
However, I've never used these before.

Which of these would be the best choice for recapping Boatanchor
receivers?
Is one type better suited to a particular stage (such as the RF and IF
sections) than another type?

Finally, for my bonus question: Is it OK to use NTE metal resistors for
replacement of out of tolerance resistors, even in the RF and IF
sections?

Thanks for any help,

Dennis Gibbs

The best glue for bakelite is sold as a waterproof wood glue. It is a 2 part system consisting of a powdered resin and a liquid catalyst. It contains resorcinol and formaldehyde, which are pretty nasty chemicals, so use with care! Bakelite is a polymer formed from phenol and formaldehyde, so this might explain why this stuff seems to work so well! Regular solvent adhesives will not soften bakelite, so they won't bond very well.

This is a subject about which there's always been debate. The thing to remember is that they make specialty greases for a reason, and bearing loads/speeds affect the formulation in a big way. My personal opinion, worth just that - if you want to do it right the first time, get a tube of Mobilith SHC 100 synthetic electric motor bearing grease - cost you about $7 or $8 for a lifetime supply in a grease gun tube. It's the only type I've ever had any consistent luck with. Auto wheel bearing grease is designed for much larger balls/rollers, much slower speeds, and heavier point loads...it seems to liquify and froth too easily with the high speeds encountered in a typical dynamotor. If you're interested, I can send you a copy of the April/May 97 Electric Radio article on rebuilding dynamotors that might be helpful.

Bill:
No, just the instruction that " Noise blanker 2 is used for long duration pulses like the 'woodpecker'. To reduce 'woodpecker' radar noise interference, set switch NB2 to the on position....." As I stated, there is another noise blanker on the R-5000 (NB1) that is recommended for other pulse type noise. This receiver came out in the late '80s and is still very capable, though production stopped last year.

I have two Lysco original manuals for sale.
One is the "Operating Instructions" for the Transmaster Model 500 and
Model 600. The other is the "Instruction Book" for the Transmaster
Model 600S.
These are small items with 7 pages and 10 pages respectively.

$5.00 postpaid to someone with one of these transmitters.

How about a multi-band shortwave crystal set, with free plans, diagrams and parts lists:

from: http://www.accessone.com/~philn/econmain.htm

Build Your Own Crystal Shortwave Receiver

This project combines two popular themes from radio history: crystal radios and shortwave (SW) listening. It's the latest addition to our "Radio Wrinkles" section, designed from scratch by resident engineer Walter Heskes.

Despite all of the advances in modern electronics, there are thousands of crystal sets in daily use throughout the world. The fidelity of tone and clarity of crystal rectification are hard to beat. What's more, crystal sets are absolutely free! A crystal receiver is powered solely by the radio waves that it pulls from the air.

We dubbed this inexpensive radio the "EconOceanic" in honor of the legendary Zenith TransOceanic family of shortwave radios. It tunes the AM broadcast band, from .5 MHz to 1.6 MHz, and most of the shortwave band, from 1.7 MHz up to about 17 MHz.

There's plenty of SW activity in these bands, so you'll hear lots of different voices, a mix of languages, and even music. In addition to powerhouse stations such as the BBC, you'll also hear non-commercial amateurs, some of whom broadcast using the dits and dahs of International Morse Code. And don't forget to set your wristwatch by the precise WWV time signals. They appear at exact multiples of 5.0 MHz across the SW bands. Listen for the calibration beeps and periodic time announcements.

We hope you enjoy this project. If you build an EconOceanic, send some email to let us know how it worked out. Walter can be reached at wmh@nomad.com and Phil is at philn@accessone.com.

Let's all remember, Fry's is a *grocery* store! It just happens that they sell computer parts and dishwashers (but very little "food"). I don't expect the Lucky store employee to help me select a cheese that is compatible with my (purchased elseware) frozen key-lime pie. Same for Fry's. If you know what you want, you accept the price, *and* you agree to the policies, then by all means shop there. If you want someone that can tell you that this vintage is perfect for a spinach pie but not for a cherry pie, go to a store that has real salespeople and pay their price.

Also, for some reason the 'droid at the exit door never stops me. Of course, I never stop, or even acknowlege them. They can only stop people that WILL stop for them. They have no recourse against you if you don't. The reason that Price Club and similar places have leverage is that you've agreed to their policies when you join. They can also revoke your membership. The only way that Fry's can keep you from shopping there is to get a court order prohibiting your presence on their property. (Or by pissing you off.) Both of which, of course, are bad business...

Been there, done that, loved it. As a teenager in the late '50s, QST was my Bible and nothing since has ever been any better. W1HDQ (remember him?) was like a God to me and when he passed away a few years ago it was like a member of the family had gone. I suppose I was an impressionable kid at the time, but I've been licensed 41 years now and the feelings haven't gone away yet.

About a year ago I was working a contest on 40 meters and got on about 1 AM local time. I quickly worked a ZL and a VK and then the band became quiet. I was running 1500 watts out so I knew anyone on could hear me. I called CQ several more times with no answer and slowly came to realize the entire band was all mine. On the entire dark side of the Earth, I was the only one on. I kept calling CQ looking for someone else, but 40 was mine alone. Eventually a K9 in Indiana started CQing and the spell was broken.

Four decades and the magic is still there.

Another note. According to Loctite information, their "Black Max 380 Rubber Toughened Cyanoacrylate" produced from 1-6 times the bond strength (depending on the formulation of phenolic) as their general-purpose cyanoacrylate adhesive. If standard super-glue doesn't do the job, you might try to locate some of this stuff. You might be able to get it from an industrial supplier.

Make sure that the surfaces are clean; Loctite recommends alcohol for cleaning phenolic.

Thanks for that list of things there Al, brought back a few more
meories for me too.

Ah yes, I believe it was the 1962 edition of the ARRL handbook
in the North Torrance local library I ran across that set the hook.
I can still rememer trying to figure out the difference between a
40 meter and a two meter transmitter. By looking at the front panel
and counting the meters.

No, the "woodpecker" appeared during the 1970's, and then disappeared after several years of causing great QRM on the (American) ham bands (primarily 20 meters). When it first appeared, many hams thought that there was something "wrong" with their receivers...it was that bad!

Well here we go again! Not "FS", but "FA at Ebay!"

So how do you fight this? Go to Ebay and register as a user. Do this under a new, never to be used again name.

Go to each auction site post here, and make a BIG bid. This will discourage other bidders,and , hopefully, make you the winning bidder.

Finally, send no money! This will require the seller to pay for another auction!

[Rest of interesting post snipped only to save bandwidth.]

I've enjoyed reading your post and the followups. (About four or five so far.) From their content, however, I think I'm the odd-man out and so decided to delurk long enough to respond.

That is, I'll be fifty in November and remember those drills. Also, I may be the only one so far to respond who isn't a Ham. I got my 1st phone license in 1970 (now grandfathered), but never got around to learning code well enough to go after even a Novice ticket!

But I did work on a lot of Ham gear when I was a tech in the mid '70s. The HW-101s and similar designs were educational because they reinforced a lot of the theory that I'd learned in tech school.

I didn't have any Elmers, but I've met Hams (some friends) who were friendly, competent, and knowledgeable.

For me, two "defining moments": when my Dad got me a subscription to QST in 1969 (I was 12 at the time), and a year or two later when my high-school biology teacher gave me an ol' Hallicrafters S-38 that was lying around his garage. I didn't get around to getting licensed until 1992, but I got the radio and BA bugs very early. Give me a good boatanchor radio, my pipe, and a cup of coffee and I'm happy!

OUCH! I thought that was one of the reasons we used plastic - to get away from that kind of stunt. For what it is worth, anything I have found at Fry's, Comp USA has been willing to match (and even beat) the price on and they have been quite nice to me when an exchange was needed and even gave me cash back (on a credit card purchase) when an item purchased went on sale 3 days later.

I have one; what do you want to know? It's a good model, very long
production life.

Probably rec.radio.amateur.homebrew would be a better group for this
topic, unless you are looking to buy or sell an HP8640B on eBay, in
which case one could easily surmise that this is the correct group to
discuss it...

Source record: 97833

Jeff,

This is the best post I have seen in the past few months. No fussin'.
Me, I grew up in the 60's and 70's worrying about those same things,
though I am just barely young enough to not really remember any of
of the TV coverage of Viet Nam. I am old enough to have remembered
having seen the first men on the moon though. I guess it makes me
fit somewhere in the middle between wide-eyed novice and old timer.

I got interested in the 70's from visiting the only ham in town. He
was always giving me "junk" as he called it, stuff he would have thrown
away, but figured it would be in better hands having given it to me.
So, even in the era of solid state, I started on tubes. Still like them,
the rack with the two diversity-setup R-390A's behind me, the RBL-5
on the floor beside me, and the shelf full of assorted BA's next to me
attest to
that. And I tend to give stuff away too if it will help someone get an old
set going.
(gee, there is another give-away, calling a radio a "set". I should be too
young
to be doing that. heehee)

Like solid state too, but much of the newer stuff is too expensive. I have a
Kenwood TS-430, but probably gets less use than the Racal Syncal-30
portable set I have next to it. The Racal is more fun, even though it doesnt
have
any tubes. Generally like the surplus stuff, if for no other reason than it
is
more "fun" to operate, usually cheaper than a plain old ham transciever too.

I do occasionally operate CW, but mostly listen. Trapped in an aprtment at
the
moment with no room for decent transmit antennas. Never have gotten around
to particpating in SKN. The bad part is that having been a Tech+ since 1979
(was a novice for a year before that) I finally upgraded to General, and
now
I *don't* have to just operate CW. But probably will every now and then, it
gets
more contacts for me that phone on my puny antenna system.

Oh well, enough ranting and random words.

64. Spirit of Radio Lives on the Net

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-01 00:00:00 UTC
From: arc5@ix.netcom.com
Message-ID: <6v00jp$d6s$1@nnrp1.dejanews.com>
Source record: 97835

I've recently bumped-into a new "net-speak" word
I just had to share with you. The spirit of the
radio arts lives on in the "new" communication form.

nether: (nee'-ther) noun; derived from "net-ether";
analogous to the "ether" of physics, a rarefied fluid
or field once thought to be infused throughout the
universe and to be the carrier of all forces,
such as radio waves. The nether is the ocean or
stream of "internet" or global network data,
taken as a whole.

Useage:
"The competitors have a new marketing plan.
Get in the nether and find out about it."

"Where ya been all evening?"
"Oh, been sailin' the nether."

(as salutation)
"Yours from the nether,
Becky User"

Pretty neat, huh?
And cooler then "cyber-" anything.

Even today when tech is going super-sonic,
Old Radio Lives!

Does anyone have the schematic for the Hallicrafters SM20 external S meter? I would like to replicate one to use with my S20R and SC40B. While I could design one from scratch, I really would like to replicate the circuit used in the original. Even knowing which tube they used would be a clue as to the circuit used.

Thanks,
Neil S.

>
> -bill
> KB3PT
Yes, it was not limited to the ham bands. It is my understanding that it
tracked the MUF. I frequently heard the signals in the 12.5 to 13.5 MHz
range.

There were several transmitter pulse rates involved and I heard two
pulse rates seperated by 100 kHz on 20 meters. These were most likely
different installations with the differing pulse rates to help the
receive signal decoding problem.

The jamming I heard was not OTH signals. The non OTH signals were
frequently heard on 40 meters jamming the various broadcast stations.

Well, my technique would be to slide 'em both back on the
shelf, thinking, "I'll figure this out soon." Then a year later
you find a perfect one that's too good to resist. . . and then
you'll have three! ;-)

Right now I have a purty-nice SX-42 with a fried bandswitch,
and a mostly-stripped SX-42 chassis with a good bandswitch.
The purty-nice one has been waiting for its switch transplant
for almost a year.

Cheers.

73. UNNOFICIAL HAMFEST REPORT - GRAYSLAKE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-01 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19981001131305.03738.00002112@ng-fb1.aol.com>
Source record: 97844

I always like to read about prices and "finds" at Hamfests...here's my
unofficial
report of asking prices as found this last week at Radio Expo, Grayslake
(Chicago)
IL.

Johnson Ranger...holes drilled on top of cabinet...lettering worn off,
complete...
$260...seller snapped at me when offered $100.

Johnson Ranger...complete, dirty $130

HRO-50T...2each...one had speaker (nicely sanded and primed...ugly), one
had two coils...$150 each.

SX-62...dirty but would clean up nice...I bought it and owned it for about 15
minutes, then sold it for what I paid for it...$125.

Meissner Signal Shifter...pair for $40...one good, one doorstop quality.

KWS-1...some of the knobs looked "strange", but all there...seller asked for
$600!
Rumors were flying that it sold for less.

Lysco Transmitter....it was there, don't remember the price...

DX-60's...many sold (easy to carry around in 90+ degree heat) $60-$75

R-4A...clean...poor guy couldn't get $100 for it...sold for $75...had extra
Rocks

SX-28A, Matching Speaker, Crisp Manual...a real cream puff...$350

Cobra 23 CB Rig...bright, blinding chrome...$25!

D-104's...too many to mention, bought mine for $20 with "collins plug" on end
(hope the element is good!).

NC-300's...poor guy tried selling two of them...$125 and $150 each...one had
a Heath XTAL calibrator...both looked crummy...but could
clean-up
a bit...the one for $125 went for $75 after a cell-phone call
to the
owner sitting comfortably at home!

KWM-2A...$1000..."it's a round emblem" said the owner as I was walking
briskly away.

Command sets...some numbskull with a big PA system kept hawking these
like some sort of carnival side-show...he ended up
giving
most of them away.

DX-40 with VF-1...$150..."it has all new caps"...OK.

ARRL handbooks...all you'd ever want...50's and 60's...$10 to $15 ea.

That's it...WB9GKZ

Anyone out there need parts from an SX62A? State what part(s) you want. Give an accurate location if small electronic part. $10.00 minimum offer does not include shipping. Shipping weight starts at 1 lbs. Removing parts is time consuming plus my time and shipping material. Make reasonable offer with that in mind. I do not want to run this like an auction. So whatever you offer is it. No auction here. This offer will close out by Sunday 6:00pm. I will only E-Mail the folks who make a reasonable offer.That is to avoid bidding wars. All who make offers will make offers knowing that they may not get what they want. My time is valuable, and not in this to make major bucks. PLEASE E-MAIL YOUR OFFER TO: WJHF1000@AOL.COM Thank you.

You've never walked out of Fry's with a full shopping cart but without the
128 meg of SIMMs the cashier "forgot" to get for you, have you?

BTDT. I said theft control wasn't the *primary* reason. I'm sure they
watch for thieves *too*. But making sure customers get what they pay for
is another one of the excuses for the door-nazis.

Low power units are available new through some dealers. Altec here in
Texas, for example. For rotor controls, crossover networks, and other high
current applications, use motor run capacitors available from electric motor
retailers.
Hope this helps,
George

No! I'm not that stupid! If I buy 128 meg of SIMMs I make sure I know
EXACTLY where they are before I leave the store!

The owners of Frys are known to be some of the cheapest people in
existance. They would never in a million years pay employees (even the
minimum wage that they pay them) to make sure you got all your stuff.
The ONLY thing they care about is that you don't take more than you
bought. THE ONLY THING!

You are either a company TROLL like the last guy said or you are so
naive its funny. I'm tending toward the TROLL theory... Hard to imagine
anyone that naive.

I grew up in the 1950's as well, but I don't believe that any of us ever really took the so-called "Cold War" threat as serious. Much less now, cuz I don't believe that it was much more than a phony display of acting and performance on the world stage..

> However, I got licensed in 1967 and have been having an enjoyable time
> with amateur radio ever since.

What a coincidence. I got my Novice ticket in 1976..

> My question for some of the BA types here, in the 40-50 year old
> range, is this. How many of you got started in the mid- sixties and
> used to devour old QST's as a way to pass the time?

I used to devour old QST's from the 1950's and 1960's reading the tech articles and new product reviews in order to upgrade and modify the old equipment to use on the air in the 1970's..

> How many hung out at local clubs and pestered the local TVI
> generators?

Ah, I just called 'em on the telephone, but with the advent of cable TV, the TVI era was well on it's way out..

> Despite the COMPLETE and TOTAL lack of the word "hobby" in the FCC
> rule regarding amateur radio, I grew up in the "hobby" thinking of it
> as a vast fraternity of (mostly) enjoyable fellow amateurs.

Ah yes. The good old days..

> How many of you had the benefits of an Elmer or two?

This was before my time, as by the late 1970's this term had died out, but we had equivalent helpers among the old timers..

> How many of you really did chop parts out of old TV sets for one
> reason or another?

Guilty as charged.. I think I built my first linear amplifier with an old color TV power transformer..

> I guess what it comes down to, I grew into the role of a ham with the

The problem is that life is overfilled with unnecessary responsibilities
that now don't allow us the time to get together and assist each other..

> I have been a faithful attendee, as a vendor, at the TRW ARC swap meet

You betcha..

> When asked if I had a resellers license, I mentioned that I actually
> need a rebuyers license based on the general cash flow.

The true spirit of swap meets, no matter whether ham radio or otherwise,
is dead and gone. The commercial dealing has all but ruined it..

> And it is certainly a lot easier to bring home that 500 lb WWII

You mean those things that your wife makes you throw out years later?

> To me, amateur radio has been a 30+ year journey to a strange and
> wonderful place full of, well, strange and wonderful things, places,
> people and technology.

True, but you have to admit that it was a lot more intriguing before the
powers that be decided to bring the entire world a lot closer together
through the internet...among other things I won't get into..

> Oh yeah, this *is* a boat anchor newsgroup. If the above didn't fit
> into some people's rigid guidelines, perhaps the following will.

As far as I'm concerned it does, and for those who don't like it this
just proves that the conclusions regarding the "friendly brotherhood" of
ham radio operators is a thing of the past..

> After years of threatening to get on for SKN on new year's eve, I
> finally made it last year. *And* I managed to do it with a Heathkit
> DX-20, Hammarlund HQ-110 and a BC-453 as a Q-5er. After several hours
> of no success, I managed to finally snag a QSO.

Almost everything I use on the air is a boat anchor. Although I haven't
been on HF for years because of moving, I still have the Collins KWM2

waiting to be set up the next time I get a stable residence..

> A a special tip-o-the-hat to W6FU for making the 30 year reunion
> station a success.

I'd love to be involved in an on-the-air boat anchor reunion. Some of us used to work local two and six meter AM in Fresno before I left in 1979, and think I made my first DX voice contact with it when I upgraded to Technician..

I still remember the contact, WA6TRO in I think Colorado..

> 73 es GM from Jeff
> Looking forward to another 30+ years of more of the same.

That's the spirit..

> It's difficult to imagine our universe run by a single omni-potent
> god. I see it more as a badly run corporation."

Consider that from what we can see, our planet is the only place in the entire universe in which this phenomena occurs. It's not his fault that man has abandoned his oversight and turned the existing order into chaos.

How could this be, since to this day no one really has any actual idea
of what it was or it's purpose?

The most common theory at the time was that it was some kind of radar
scan, however, it has also been theorised that it may have been Tesla
experimentation similar to the U.S. military HAARP Project that has been
criticised as being responsible for the disrupted weather patterns..

BINGO! As I mentioned in a previous post there is an indication that
they may both have been/are experimentation with Tesla technology which
is allegedly responsible for the chaotic weather patterns that have
progressively gotten worse during the past two or three decades..

Source record: 97782

Dennis:

All the capacitors you mentioned are light-years ahead of the OEM capacitors in the set. My personal choice is the Panasonic E-Series Metallized Polyester Capacitors from Digi-Key. It's hard to best the price/performance of these caps. In theory, the polypropylene caps are superior to the polyester types but they are both far superior to the original paper caps in your receiver. If you feel you must use the best, then select one of the polypropylene types. Any of the types you mentioned in your post will out last both of us! None of the paper capacitor values are critical, so 5% caps have no real advantage over 10% units.

I have been using carbon film resistors to replace the old carbon composition types. I haven't used the metal film types but I don't think you would gain much using them in your AR-88LF.

Best Regards,

Ed

> THE SUCKER LEVER YOU AS A DEALER WANT SOMEONE TO PAY.
> B.A.

Yes indeed, standard Usenet Excuse. Do something, then when you get
bagged, claim that it was a joke/mistake/etc.

Okay, since that's what it takes, I invoke Usenet Rule to end this
thread.

"Nazi"

Those with some history of the net will know what that means.
It isn't directed at either Dave or amfone. Just that it has
become standard practice that once somebody mentions Nazis, the
thread is officially over.

Sorry folks, you'll have to move on to another topic now.

73 es GA from Jeff

Looking at my collection of equipment has made it clear that I will not be able to get to my BC348's. Therefore I have the following available:

1. Complete, no mods BC348 Q. (6V6 glass instead of metal 6K6). Runs on 28 Volts. Excellent shape.
2. Modified BC348. Power supply and speaker added. Ham mods with copies of various reprints from CQ about the rig.
3. Good condition unit with parts out.
4. Unit good for parts.

All 4 pieces for $310. I'm in the twin cities area of Minnesota, and will drive 50 miles toward you, if needed. Shipping possible, but.......

Marc

112. FS: TMC PAL- 500 Amplifiers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-02 00:00:00 UTC
From: "J. Lee Smith" <ckvnfm@mb.sympatico.ca>
Message-ID: <01bdedb5$2d58cde0$c635c8cd@ckvnfmmb.sympatico.ca.mb.sympatico.ca>
Source record: 97794

Hello All BA Folks:

I am selling three Technical Materiel Corporation (TMC) PAL- 500 amplifiers with power supplies. These were used by the Canadian Department of Transport in the aeronautical service for ground to air communications and some point to point in northern Canada, and provide continuous coverage from 2 to 32 MHz. Output is described as 500 watts from a pair of 4CX350's with either 100 milliwatts or 1 watt drive. Construction is beautifully done to mil spec. One of the amplifiers apparently has never been installed in a rack, and appears in new condition. The others are in varying states of operational capability. If you would like to see a .jpg picture of one of these taken from the manual, please email me and I'll forward it.

The cost for the entire lot is $500 US and a ham buddy of mine is a long-haul trucker who can help with the shipping problem. This would require co-ordination and patience. These are very heavy power supplies (about 90 pounds), packing and shipping may be prohibitive otherwise. RF decks are pretty light...about 25 lbs. This equipment is located in Winnipeg, Manitoba, Canada.

There is a spare plate transformer and a choke. Manuals are included, however some of the interconnect harnesses are not available for one unit. Also will toss in an STE-1 strip exciter which provides drive in CW, AM, or sideband.

The reason this lot of equipment is going "on the block" is that I ultimately want to get a Collins 75S-3 series receiver, so if you have one which may need a loving home, I'm very open to swap offers.

All the best to all BA'ers

Lee Smith

Source record: 97847

Hi Matt.
I have an HP8640B the military version.
It is one of the best sig-gen i've used. The only drawback is that it only goes to 512MHZ
You have to be carefull when you buy one that it is in excellent condition. They have nylon gears that tend to break You should inspect one very carefully and make sure that all the functions work, that the meter works and the calibration is accurate, that it has the extender card and the adjusting wrench still inside the unit. I bought one from a communication shop back east with a money back guarentee that if it wasn't as represented he would refund my money. I have had no problems with it. FYI(for your information I paid $350.00 for it. Plus I paid $45.00 for a copy of the service manual from some one else.
Murphy's surplus in El Cajon near San Diego has them for sale. Call Mike and talk to him about them. Tell him that I told you to call him. My name is Mike Tyler and my call is K6STU.
Good luck.

116. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6v1m12$4ns@news.Hawaii.Edu>
Source record: 97848
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

The Crystal Radio Club in Rockland County, New York had a wonderful little club house on one of the county's main two lane highways. It was literally a "radio shack" and it caught my attention when I was about ten.

At about that time (1968 - 1970) Jean Shepard (K2ORS) had a radio show on WOR AM in New Yourk city. My father and I used to listen to Shepard's stories - included among them were frequent references to his adventures on the ham bands (and at the workbench).

One night my dad took me down the club and coaxed me into going inside and asking for help. I quickly had several Elmers (principal among them Hilmar, WB2NEC).

The atmosphere of the club was great. It smelled of musty old QSTs and was filled with fascinating old QSLs. The back room was piled high with old, junked HB gear (all of which I wish I had now). I still have one piece of that old gear - all that remains is one old Simpson meter.

Do you really find it objectionable to let a store employee count the items in your bags upon exit? Is this really "threatening" to you? An "invasion" of some sort?

Isn't the adage, "It's only objectionable to someone who has something to hide" applicable?

Don't enter alleged Constitutional rights here - they do not apply. You're on private property, in a business NOT run by the State or federal government.

Hello all.

Have a Kenwood TS-520SE that I just acquired. (Getting back into radio after a 20yr lapse.) Rig is execellent condition, but...There is no discernable difference in audio with the Noise Blanker (NB) on or off. The manual says to use the NB to reduce "pulse type noise". Trying it on 80m and 40m where QRM is running +10 and it has no apparent effect. Is this *normal*? What should I hear when the NB is active?

Thanks for the help!

126. Big meteor shower November 17-18th, work some meteor scatter DX on VHF

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-02 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseF06n0I.1L1@netcom.com>
Source record: 97858
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.scanners,sci.astro

On November 17 and/or 18th, before dawn in the wee hours of the morning, the leonid meteor shower is expected to hit big time. And thus opportunity to do some long distance "DX" communications on VHF and UHF frequencies. These radio waves can bounce off of the ionized meteor trails in the sky. Could be thousands of meteors per hour at the peak. With this many meteors, one might be able to carry on long QSO's (radio conversations). One could monitor FM broadcast band stations of distant cities to listen for "openings". Or NOAA weather freqs.

And we can still do this even if clouds cover the sky.

> Crazy glue does great. I back it up with epoxy(scrape surfaces well).

I've used Crazy Glue on Bakelite parts with very good results after cleaning with detergent and water and then 91% isopropyl alcohol. I dried the parts at room temperature first and then for a few minutes in the microwave oven to be sure any residual water was gone before applying the glue. Don't use the microwave with parts that have metal inserts.

I've also gotten good results with epoxies. Clean as above and use the slow setting variety of epoxy. Let it set for a day or two at room temperature and then put it in the microwave for several minutes at a lowest setting until quite hot to the touch. Don't rush the room temperature curing or you'll get bubbles in the bond. I've edge-bonded .125" sheet stock this way and it was surprisingly strong.

Actually, the police can do a limited cursory search of anyone they may stop to question, whether or not the person is/will be arrested. This is allowed for the safety of the officer as well as the subject being questioned. This search can include the subject's clothing and any personal property within the immediate reach of the subject.

A merchant can inspect a person's bags, briefcase, etc upon entering or leaving the store as long as this policy is posted at the entrance of the store. Additionally, the law allows the merchant to exercise "self help" in determining if any merchandise has been taken from the store. This includes detaining a subject for 15-20 minutes while searching any bags, packages, etc. It does not allow the merchant to do a search of the person's clothing until after the person has been arrested. Detaining a subject longer than 15-20 minutes usually requires that the merchant arrest the subject and seek prosecution.

Any items discovered through the use of "self help" may be recovered by the merchant without the merchant having to arrest or prosecute the subject. This holds true whether or not the merchant observed the subject concealing the merchandise.

However, if the merchant wants to use the recovered merchandise as evidence to prosecute the subject, then the merchant must see the subject conceal the item and keep the subject under constant surveillance until such time as the subject is detained.

This is how the law reads in California, you may want to review CPC 490.5 for additional details. Some other states have even more aggressive merchant protection statutes. In many states, the crime has been committed by the act of concealment alone, whether or not the subject attempts to remove the merchandise from the store!

Hi, Gil.

Your noise blanker _might_ be working, but not on the type of noise you're receiving. The noise blanker is supposed to work best on repetive, narrow noise pulses such as ignition noise from motor vehicles. It may or may not work so well on noise picked up by your antenna which is coming from a faulty AC power line. Also, it's very common to pick up QRM from harmonics of TV set horizontal oscillators in the 80m and even the 40m band. The noise blanker will not work on that type of QRM. You can check for this by shutting of any nearby TV sets.

Best regards,
Joe LeKostaj WB9GOJ

I found an amp project that I would like to build in the 1961 radio amateur's handbook using the 4-400A tube. This will be my first high power amp project, and I would like to know if I am going in the right direction with choosing this project. Any ideas on the cost/source of this tube @ socket? Anything I should be aware? Would a project using 4 811A's be better? Some guidance please! I would like to build an amp rather than plug one in " out of the box"

TKS!

Paul

Hi Gil (and others),

Like most noise blankers, the '520s is most noticably effective against impulse noise such as ignition noise when running mobile. I have a TS-520-S; its the same rig but without the capability of running mobile. Check the owners manual and you will find a tune up procedure for the noise blanker. Mine was OK when I bought it 20+ years ago but after touching up the tuning, it worked much better.

Hope this helps.

Hi Terry,

The only direct subs for an 80 are the 83 and the 5Z3.
A 5Z4 is a sub, but only if you replace the 80 socket
with an octal socket, and rewire as follows:

4 Pin Socket (80) to 8 Pin Socket (5Z3)
---------- ----------
Pin # 1 Pin # 2
Pin # 2 Pin # 4
Pin # 3 Pin # 6
Pin # 4 Pin # 8

(From Rider's "Receiving Tube Substitution Guide Book").

>some sort?

Actually, Yes, I do find it objectionable. I object to the assumption that
I MAY have stolen something. It's not threatening, although it IS an invasion.
If they think that I've lifted something, *please* call the police and have
them look into it. If not, let me about my business. I've completely stopped
shopping at CompUSA in Santa Clara because they physically prevented me from
leaving the store without showing them the receipt (?unlawful detainment?).
At that store, there is no merchandise between the cashier and the exit door.
It is also in full view of the guard. IMHO, the guard should be able to
watch the patrons as they carry their purchases from cashier to the door.
I do not steal from them, and I expect that I will not be treated as
someone who does.

>Isn't the adage, "It's only objectionable to someone who has something to
>hide" applicable?

Do you open your checkbook for inspection to anyone that asks? Or your car?
etc? I'd be surprised if you did. Do you have something to hide? I don't
know. Should we find out? That is a specious argument.

>Don't enter alleged Constitutional rights here - they do not apply. You're on
>private property, in a business NOT run by the State or federal government.

Actually, I wasn't even thinking of that. I was thinking of being treated
decently and honorably by the merchant, as I treat them.

Oh, and by the way, Constitutional rights DO apply on private property.
Last I checked, the US Constitution was the supreme law of the land, an
no others can override it without a lengthy process.

Expect less and you'll get it.

Fry's doesn't check you bag to make sure you haven't stolen anything
-- or at least that's not the primary reason.

The real reason is that they are making sure that the appallingly
incompetent cashiers have given you everything you've paid for.

Source record: 97890

Here's a list of a few things folks on this group might have an interest

in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Dynaco FM-3 FM tuner. Excellent condition with VERY bright eye tube.

Works great! $80

2.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges.
Good to 400 MHz. No slugs needed! $100

3.) Heathkit OP-1 professional oscilloscope. One of the best tube scopes

Heath ever made. MINT condition. (Unit was assembled this year!) 6 MHz
bandwidth. 5" CRT $75

4.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable

current limiting. Volt and Amp meters. Good condition. $150

5.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm
outputs and level meter. $125

6.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to
3 V output (+20 dBM) into 50 ohms $100

7.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM
modulation. $100

8.) Racal/Dana 1994 universal counter. measures frequency, time,
period, etc. Up to 160 MHz. Dual channel. $80

9.) Box of used, tested tubes. No useless TV types. Mostly pulls from
test equipment and industrial gear. 6 and 12 volt types, lots of
Industrial/military types. Some audio types. Approximately 400 pieces
total. Prefer pick up. $150

That's it for now. Thanks Again!

Dennis, if you are replacing common paper capacitors (as opposed to specialty caps), any one of the above would do. Personally, I would use an axial cap and install it inside the old paper cap tube. I use Siemens axial poly 630V for most things. The modern caps are far superior to the caps you are replacing, so there should be no difficulties UNLESS the designer was counting on the indifferent Q of the paper cap to keep the circuit stable. This is rare (and poor design practice). As for the resistors, there should be no problems at the frequencies of the AR-88. Be sure to use resistors of similar physical size to the originals, not similar wattage ratings. The ancient resistors were run at low temperatures because of their poor ageing and stability, but the new ones can run MUCH hotter while still being stable. Unfortunately this can couple much higher temperatures into places never intended, instead of spreading it out over a larger area as in the old resistors. This can lead to frequency drifting and damage to sockets and terminal boards.

Some of Shep's best shows were the ones on Saturday nights before a live audience in Greenwich Village in the early 1960's..

I got started in the hobby as a result of my father taking me to his ham friend's house about 1956, when I was 8 years old. I wound up leaving with a Heath AR-3 receiver which I almost wore out. I used to drive my mother nuts by listening to CHU (the Canadian time signal station) for an hour or so, with the beeps resonating all over our flat in Newark NJ. I also used to listen to the hams on AM on 75 and 40 meters, and that used to fascinate me, even though at first I had no idea what they were talking about.

After saving Xmas money, allowances, lawn mowing money, etc. for what seemed like years, I got a Hammarlund HQ-145X in 1961. On going to high school, an amateur radio club had just formed under the leadership of a student ham, WA2OGC, John Koval. John was able to get an appropriation and permission to put a Hy-Gain tribander on the high school roof, but we had no money for gear. While we had a faculty "advisor", he made it known that he had no interest in getting a license and we were pretty much on our own. To get on the air, some of us would bring in our boatanchors to the school to see how they would operate with a beam up 75 feet.

WA2OGC was terrific. He single handedly got about 15 of us licensed as novices, and a good number of us are still licensed. Learning code was always the barrier for me, and John taught it to me. Sadly, I do not know his present status, as it appears he is no longer in the FCC data base.

I never really had any other Elmers, and there were no other active radio clubs in my area that I was aware of. I was active on the air for about 3 years, until college and other interests drew me away. Let the license lapse. But I always retained an interest, and got back on the air again last year. I was able to track down one of my high school ham buddies, and in fact he was on the VE team when I took my exams.

Making up for lost time. THANK YOU JOHN, ex WA2OGC, WHEREVER YOU ARE!!!

73, Ray K1XV

John,
Several post have answered your question correctly. THey have stated to use grease made for that purpose and where to get it. If for some reason you can not follow that advice, get a frease with a high lithium content. It stays where you put it and will not run even when ignited.

Man, and to think what they went for in their day..

I repair vacuum tube guitar amps for local musicians, and there are some guys who would salivate over these in place of 6L6's. Since I would love to see them go either to the music or vintage hi-fi enthusiasts rather than sit in an old general coverage receiver which don't rely on tonal quality and would work just as well with the current East European manufactures, why don't you contact your local music stores or list them on guitar/amp newsgroups?

I have a Johnson Viking Matchbox (275 watts). It is in fair-good shape, all original knobs and internal components (meter for swr/pwr is present, circuitry missing), some normal scuffing and marks.

I am looking for a Drake MN-7 or MN-75 or MN-2700 tuner or a P-75 Phone Patch.

Also have the Drake SP-75 Speech Processor which could be part of a trade.

Also have a Kenwood PC-1A Phone Patch to trade for a Drake P-75.

Will add $20. to the Matchbox towards the patch, more towards a tuner, depending on the condition and model of the tuner.

I have two 575A rectifiers Sylvania, that came from a defunct AM
station I was helping clean out--they are obviously new, with the
original packing and the original boxes..they we're spares for the
stations Collins 20V2(long sold)...The only problem with these tubes
is that the glass envelope, and the metal bases have come apart. It
is obvious both visually, and with an ohmeter that the filaments are
intact, and that the base and envelope have to be glued, with whatever
kind of magic glue that's used for such things.
I GUARANTEE these tubes to be as represented, or I'll gladly refund
your purchase price...I'll even throw in an additional pair of 575A,
which we're obviously pulls from the 20V2..don't know anything about
there condition....$50.00 + shp Bob K2LGO

@cts.com
Newsgroups: rec.radio.amateur.boatanchors

I have a rare SP-600-VLF-31 receiver for sale in exc cond. I would rate it
a 8.5 on a 10 scale. The freq coverage is 10 KHz to 540 KHz.
The rx is rack mount and does not have a cabinet. The price is $1500
shipped in a wooden crate. The rx came from the marine coast
station WCC in Chatham, Mass (Cape Cod). If interested contact:

Unfortunately, the peak won't be visible from the US. The radiant of
the Leonids is out of the constellation Leo, of course, and that won't
be above the horizon for US amateurs during the peak of the shower.
This is supposed to be a 33 year peak, and counts as high as 100,000
meteors an hour have been predicted, but we're going to miss the
show.

Since the peak will be below our horizon, we can't take advantage
of it for meteor scatter contacts either. Sorry. Maybe in 2021.

>knowing morse?

The ITU distress format includes a 10-second key-down for RDF purposes.
In this instance, one could close the key switch to key the transmitter
continuously.

I might as well provide the entire ITU format for you:

Transmit Auto-Alarm signal (twelve four-second dashes with one-second
pause between dashes) - this causes alarm bells to begin ringing in
other stations within receiving range

Wait two minutes (if possible) for off-duty radiomen to respond to
their radio room in answer to the ringing bells

Send the distess message:
SOS SOS SOS DE <callsign> <distress message> BT SIGNED MASTER AR SOS

Transmit continuous carrier for ten-seconds for RDF purposes

Acknowledging stations send:
SOS <callsign of distressed station> DE <own callsign> RRR SOS

From now on, all transmissions from all responding stations
must begin with SOS. The frequency is now in an extended
silent period until QUM is sent by the controlling station

Oh, what the heck - I might as well append a story of an actual
distress I worked many years back; here's Part 6 of my 500 kc
series - hope you all enjoy reading it! (You might feel as if
you started in the middle of some book - you are - there were
five previous chapters prior to this one.)

Jeff KH2PZ

Copyright 1994 by Jeffrey Herman - All Rights Reserved.
Permission is given to publish this piece as long as no monetary
gain is to be made. Please notify me prior to publishing.

In the following true narrative the ship's name and her callsign
have been changed.

Part 6: My First SOS at NMO

As mentioned in an earlier part I always sat the 12 hour 500 kc
night watch on my duty nights; I loved listening to the steady
flow of calls from ships in far off waters. Even though we sat
in the Central Pacific I would sometimes even copy a fluttery East
Coast US shore station. Throughout the night I would hear ghostly
signals, just above the noise level, that would fade in and out from
who knows where. We used a Beverage-type long wire that stretched over
one mile in length, and NMO sat in a very electrically quiet region.
We were able to copy any ship or shore station anywhere in the Pacific.

One evening, feeling a bit drowsy (0200 local!), I thought I was dreaming
when I heard a long dash, a pause, another long dash, a pause, another
long dash, a pause, ...
Like an electric shock, adrenalin flooded through me at
the speed of light - OH MY GOD - SOMEONE IS SENDING AN AUTO ALARM!
My eyes shot to the clock to time the dashes: 4 seconds on, 1 second
off, 4 seconds on, 1 second off - those 12 long dashes almost froze me.
I yelled into the intercom to the chief `Auto Alarm on 500' knowing
at the same time alarm bells were ringing on board every ship scattered
around the Pacific within radio range of the distressed ship. Recall
that when a shipboard operator goes off watch, ITU rules dictate he leaves
a receiver tuned to 500 kc with a decoder attached - if that decoder hears
at least four 4-second dashes each with 1-second seperation, relays in
the decoder will clamp shut triggering alarm bells in the radio room,
in the radio officer's sleeping quarters, and up on the bridge, to warn of
a distress message about to be sent on 500 kc. Now, the two-tone AA
used on the voice SSB MF distress/calling freq of 2182 kc was common:
Mexican fishing crews used them when they were drunk. But AA's on 500 kc
are *never* sent except when a ship is in distress. This was the first
one I'd heard since my radioman school days; I can't put into words
the terror I felt while sitting out the ITU-required 2 minute wait
(recall that the ITU dictates every step the distressed vessel's radio
officer takes: Auto Alarm, then the 2-minute wait [if possible] for off-
duty ops on other ships, woken by their Auto Alarm receivers, to race
to their radio shacks to copy the distress). 500 kc was now in an
extended silent period (see part 2 or 3 [or 4?]). Someone started
tuning up and was immediately pounced on by myself: QRT SOS was all
I needed to send - dead silence. One of the Australian shore stations
was sending a CQ at the same time the AA went out - he must have heard
the AA through his CQ for he stopped in mid broadcast. Nothing but
an occasional static crash - dead silence. Throughout my brief 500kc
career there had never been a silence like this I thought. Then it came:

SOS SOS SOS CQ DE DJNK DJNK DJNK SOS BT MV PANAMA TRADER HULL CRACKED IN
HEAVY SEAS MAJOR FLOODING 42-27N 42-27N 178-51W 178-51W NOW ABANDONING
SHIP SOS BT MASTER AR K

Then came the 10 second-long dash (ITU: for direction finding).

I was first - in A2 I sent:

SOS DJNK DJND DJNK DE NMO NMO NMO RRR SOS

and after me 500 kc was flooded with ships and shore stations sending
sending the ITU response of RRR SOS:

SOS DJNK DJNK DJNK DE NMC NMC NMC RRR SOS (San Francisco)
SOS DJNK DJNK DJNK DE NOJ NOJ NOJ RRR SOS (Alaska)
SOS DJNK DJNK DJNK DE NMQ NMQ NMQ RRR SOS (Long Beach, CA)
SOS DJNK DJNK DJNK DE KPH KPH KPH RRR SOS (San Fran.)

<ITU dictates a strict format to follow in distresses - from now on
every transmission must be proceeded with the SOS prosign>

along with KFS in California, NRV in Guam, a couple Japan shore
stations; the radio operator aboard DJNK must have breathed a sigh
of relief and taken some comfort knowing his message was heard by so
many.

Once the RRR SOS replies ceased NMO took control; I asked the
standard questions for situations such as this:

SOS DJNK DE NMO BT NEED FOLLOWING INFO
NR OF POB (number of persons on board)
CSE (course)
HULL ES SS COLOR (hull and superstructure colors)
NR OF BOATS (number of lifeboats)
BOAT RADIO FREQS, EPIRB
WX, WIND SPD ES DIR, SWELL HT ES DIRECTION, CURRENT (weather and sea data)
BT SOS K

and DJNK patiently answered each.

After getting these important answers I had the uncomfortable
task of asking:

SOS DJNK DE NMO BT OM PSE CL KEY BEFORE U LV OK? K

SOS NMO DE DJNK WILL DO OM

Every shipboard telegraph key has a switch which, when closed,
will continuously cause the ship's radio to transmit. This enables
rescue aircraft to home in on the distressed vessel using their
direction finding equipment. I had asked the op to close his key
switch before he leaves the ship.

At the same time our AMVER computer was generating a printout of the
locations of ships transiting the North Pacific: No ships were in DJNK's
area! At least no AMVER reporting ships; it's possible there was a ship
close to DJNK that wasn't sending us his AMVER position reports. A
very slim possibility but a chance we couldn't ignore. I was ordered
by our Rescue Center to send the DDD SOS, i.e. to relay DJNK's distress
message from our 10 kW transmitter. In A2 I sent:

AUTO ALARM (12 four-second dashes with one-second pauses)

then with my hand shaking, clenching the key:

DDD SOS SOS SOS DDD CQ DE NMO NMO NMO SOS BT <DJNK's message>
BT ANY SHIPS IN AREA DIVERT AND ASSIST SIGNED US COAST GUARD
AR DDD SOS K

Dead silence reigned for minutes which seemed like hours. An
awful, awful feeling of helplessness overcame me as I sat in
that chair with the entire NMO crew standing in silence - all of
us knowing at that very moment men were perishing in an icy ocean...

Already we had aircraft in the air heading to DJNK's position
so I notified him:

SOS DJNK DJNK DE NMO NMO BT USCG AIRCRAFT LAUNCHED TO UR POSN
ETA 3 HRS BT HOWS UR COND? K

SOS NMO DE DJNK HV TO LEAVE SHIP NOW TU OM FER <high pitched whine>

His transmitter had emitted a - a scream - it actually screamed!
I turned to the Chief asking ``Is that...?'' ``Yes, the ocean water
just flooded his radio room shorting out his transmitter and
batteries.''

I couldn't accept this - the man at that key couldn't have just
perished! I sent:

SOS DJNK DE NMO
<silence>
SOS DJNK DJNK DE NMO
<silence>

At this point the Chief put his hand on my shoulder and only said
``He can't answer you - he's gone.''

Throughout the night I continued to send the Auto Alarm and the DDD SOS to
no avail. At daybreak our aircraft reported seeing only debris: bales of
hay, which was the cargo of DJNK; no lifeboats, no bodies, only debris.

Even to this day I sometimes hear, in my sleep, the scream DJNK's
transmitter emitted that terrifying and horrible night. I pray
the crew of that ship rest in peace.

End of Part 6.

Yep. This year and the next 2 are likely to be far above the average
for meteor showers. Next year is predicted to bring a meteor storm
with thousands of times the normal rate of meteors. There is some
uncertainty whether the years on either side of the storm year will
be spectacular as well. The storm is the result of the earth
intersecting the orbit path of the comet with which the Leonid shower
is associated (think the name is Swift-Tuttle). The comet has a
33-year orbit period, and there was a huge meteor storm in 1966.

Source record: 97686

Rare opportunity to purchase an original Alpha "Steamer" PA-70V
Liquid-Cooled
Amp in Very Excellent, extra nice condition. This is the amp that is identical in appearance to the Alpha 77Dx and 77Sx, but uses a smaller, more compact cabinet. The amp is very clean inside
and out. Full output using a single 3CV1500A7 triode with attached "water boiler." This is one of the few amateur-class tubes that can be rebuilt to original Eimac specs. This amplifier takes distilled water for cooling and runs extremely quiet, using only a whisper fan for supplemental air convection past a passive radiator. I have two "steamer" amps and I am selling S/N 183. Factory's glitch protection and AG6K parasitic mods performed. Output circuit is extra rugged, using a Jennings vacuum variable capacitor for output tuning.

The entire plumbing system is new, using all Teflon components from New Age Industries, Inc., which meet or exceed original mechanical and electrical specifications. The tube was recently checked out by John Cavanary at Econco and was put through hi-pot and emissions testing. All testing results were excellent.

Amp comes with original factory manual and power cord.
I am asking $3295 + shipping and insurance. If you have any questions, I will be more than happy to answer them. .JPG images of the amp making full power available upon request.

Ditto, seconded, yes!

While prices may be somewhat better on some items, I have discovered that Fry's likes to sell returned, opened, and defective merchandise as new. Casually looking throught their stock of 900MHz telephgones recently, it was hard to find a *single* unit of *any* model that was not a open box. And yes, their staff is, if not always rude and oblivious to customers, incompetent and ignorant of the products they sell. Forget Fry's. Anywhere there is a Fry's, there are a half-dozen other stores that carry all of Fry's product line, new, working, at good prices, and with service to boot.

Here in PHX, I am fortunate to have at least the other half-dozen major national electronics retailers (Circuit City, Best Buy, et al.) as well as many specialty and commercial parts and "communications" outlets. CD's batteries, and sealed brand-name electronic parts are all I trust Fry's for.

BTW, what has been others' experience shopping at TechAmerica: they are opening a new retail outlet here (PHX metro) this weekend, and from their catalog they look like almost Mouser or Digi-Key with a storefront.

Clean station consisting of the following:

AF-68 transmitter
PMR-8 receiver
M-1070 AC/DC power supply
Cables with antenna relay
Original manuals

What looks like a Galaxy tuning knob assembly has been adapted to the receiver to provide fine and coarse tuning capability. Looks good eventhough not original. To return to original would take a knob, extension of the shaft, and filling a very small hole.

Some scratches and a few extra small holes in the transmitter and receiver cases but otherwise original.

Works good. $210 plus shipping.

Interesting Heathkit trades considered.

Try Mouser Electronics.

198. Vibroplex Speed Key?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-03 00:00:00 UTC
From: Gerry Zell <puccini@erols.com>
Message-ID: <36162701.4C8F07CE@erols.com>
Source record: 97692

Can anyone give me information on a Vibroplex "Champion Model" Speedkey?
I came across one at a flea market and would like more info on years of
manufacture,desirability, and current worth.
Its complete and in very good condition. It need some cleaning but all
in all its an 8/10 condition

Selling my extra Heathkit AK-5 desk speaker that matches the Mohawk receiver. Unit has a filled hole in the front and a couple of notches in the top edge. Easily restored to original or leave with its own character.

$80 plus shipping for this rare piece.

Interesting trades considered.

Hi Jim, one trick I remember is to connect two caps
in series with say plusses together in the middle,and then
parallell each cap with a diode with the cathodes in the middle
(and of course connected to the plusses as well)

I have an absolutely beautiful pair of Kenwood twins - R599D / T599D

These truly are collector qualify. They are perfect on the front panel. There is a small rub along the top corner of the receiver but very minor. The units work perfectly.

I have the original boxes, the manuals and the transceive cable is with them.

Price $325. plus a little shipping.

As a long-time meteor jockey (first QSO July '74) I can say that the
predicted "peaks" are often (always?) wrong.

These predictions are "precise" measurements of almost random events.
We have a cloud of debris in orbit around the sun and because 33 years
ago, and 33 years before that, we had big showers doesn't mean that an
exact day and time for recurrence is predictable.

Persieds used to have a *peak*, then it had two, now it has three and
every time I've set schedules for the "optimum" time, it happened
yesterday or tomorrow. This is another example of the danger of
computer programs. Somebody's program predicts the optimum and by
god, that's when you have to make your schedule.

I can't wait until some program predicts an *optimum* frequency too.
"Joe Blow's program says 144.12345 is the optimum for the Flakids
shower, so I'm making all my skeds there." And so is everybody else.

Bah. And what has this to do with antennas anyway?

It has apparently never entered the demented little minds of both you and that other twit, somebody@somewhere, that no one really gives a rat's patootie about what either of you think on any subject you can name. If there was a "Peewee Herman Obnoxious Child" award, you'd both share the prize. (And that goes for the esteemed "Burt P.I.T.A Award" too.)

Perhaps the nicest thing about my news reader is the blessed filter option, which I will now invoke. For me, at least, the moronic bleatting, stops here. Flail away.

I want to use an ICOM TV-R7100 (TV demodulator) with an ICOM R7000.
This unit is almost identical to the TV-R7000. The TV-R7100 has a chip
added for FM stereo and an AGC line that connects to a R7100 or R8500
receiver. I would like to get a schematic for the TV-R7100 and a
partial schematic of a R7100 or R8500 showing where the AGC ties in so
I can attach the TV-R71000 AGC line to a similar point in my R7000. Any
help would be appreciated.

Thanks,
Dick

Atlanta was the site of one of the first two stores. I don't know of
anyplace else you can find that many little components, over the
counter, with no hassle or minimum order. I hope they prosper.

With Radio Shack's increasing focus on consumer goods (and de-emphasis
on components), I wonder if Tandy plans eventually to split the
product line between RS and TA.

Source record: 97722

Hello Folks:

There has been far more interest in the TMC PAL- 500's than I can deal with, consider the units sold, as I am sure that someone from the many responses will take them. For interest sake, I have been offered a Collins 75S-3C in exchange, and since I posted these TMC's to convert to a high quality Collins receiver anyway, I think we have a deal worked out where everyone is happy.

Thanks for your interest in the TMC amplifiers.

Is it possible that eBay is a multi-million dollar swindle?

I hear rumors that there are people using multiple e-mail addresses to bid up
the prices on their own sale items.

I cannot fathom why anyone would bid so high on some of the items otherwise.

Many pieces of radio gear on there seem to sell for 2 to 3 times the normal
going values one sees everywhere else!

I would love to know what the story is!

237. value of NC-100 (not a)?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-03 00:00:00 UTC
From: Robert DAmato <rpdamato@uswest.net>
Message-ID: <36167A3F.53DC817B@uswest.net>
Source record: 97731

Can anyone advise me on the value of an NC-100, non "A", the version
with the tuning eye, the HRO dial and the art deco type front panel ?
The unit is in good working order. It does not have the original
speaker, but a magnivox in a custom wooden cabinet. There is a little
rust in a few spots on the black wrinkle cabinet, but for what it is and
it's age it's one of the best I've seen. No dents, scrapes or anything.
All the circuitry is orig except for one filter cap which has been
replaced with a tubular below the chassis.
Thanks in advance to anyone who can advise me.
73, Bob DAmato AA7LG

>help would be appreciated.

Ignore the AGC line. It's not needed and comes into play only on
strong signals which you rarely encounter.

The TV-R7100 will work fine on the R7000 by just leaving the AGC line
floating.

Yeah but joining a 'LIST' to get to work a DX station through an intermediary
self-styled "RADIO GOD" like that is no fun anyway.

How BADLY do you want to work a new country?
If it means licking that bastards jack boots, I don't NEED to work the stinking
DX! I would rather wait and take my chances to work the DX the REAL way.

Some of those "DX NETS" with a control operator, sound as phoney as the County
Hunter QSOs where each station imagines they gat an RS "2-2" report from the
other guy and the relay station confirms it as a good QSO where in actual fact
they can't even hear each other at all!

HELLO? "SEVENS COME NOW - BEGINNING WITH ALPHA ONLY!!"

>like new. It appears capable of handling a fair bit of power. I forget
>the specific transmitter the unit is meant for, but these items were
>popular amongst hams after WW2.

BC-191 or BC-375
The TU units sold for about 50 cents each in the 1950s and 60s.

We all need those 50 pF and 100 pF variable caps with no shaft.
Best part in 'em is the ceramic rotary switch which you can use
as a bandswitch in that homebrew medium power linear if you
really want to spend $75 for a switch!

They still show up all the time under the tables at hamfests and can be had for
about $10 tops.

259. Model 15 RTTY

Joe, you can post those there too.

BTW - I'd like to see some of these dudes SUE someone in another state way across the country over a $200-300 radio deal that went sour. It ain't gonna happen in most cases. Winning a case like that only gets you a determination. In most cases it will not GET you the money from the judgement.

I am grateful for the warnings myself, although I am very sorry when someone jumps the gun and falsely accuses someone - that is terrible.

One should always extend the benefit of the doubt a long time before whining.

br Folks,
br Just yesterday I ran into one of those things that give newcomers
br the impression that HAM radio operators can be elitist and
br exclusionary -- I was on the 14,247 kHz DX net on 20m, going
br through the rotation as usual when I got really slammed by one of
br the net control guys -- just for giving the DX station my name and
br QTH! It wasn't as if I was conducting an extended rag-chew QSO
br either -- The whole thing was over in less than 30 seconds.
br Apparently, it is only acceptable to give call signs, signal
br reports and 73's to DX stations on the DX net. Nevertheless, the
br language and tone in the rebuke was so completely out of proportion
br and uncalled for that I won't repeat it here. I have only been
br back in amateur radio for a month (after a 25 year hiatus), and it
br really gave me a cold feeling to think that other people just
br getting into HF might get this kind of treatment as well. People
br have to remember that lives don't depend upon the procedures used
br to work DX... We should be working towards maximizing the
br cooperation and pleasure of all amateur operators, or else we're
br all going to lose out. If I hadn't known that this was something
br of an aberration, I would have developed a bitter feeling about ham
br radio in general and HF in particular. As it was, it soured the
br experience for the rest of the day. I realize that nerves were a
br little ragged due to the QRM problems stemming from the California
br QSO Party, but that doesn't excuse rude behavior that is
br detrimental to the hobby as a whole. Curt M. Breneman
br KC2EBP

Net-Tamer V 1.12 Beta - Registered

Funny you should mention that. I've been very quiet on 2 metres in the
UK for many years but in July I was near Kendal on holiday and thought I
would ask after an old G3 friend so I made a short call through the
local repeater.

Three people came back to say that you get funny types using the repeater nowadays, who haven't paid lately.

In spite of stories about Scottish parsimony, I think it is safe to say that passers by are VERY welcome to use Scottish 2 m repeaters and are not expected to pay.

Evidently the comradehsip we have been used to in amateur radio is no longer all-pervading. Now get off my bandwidth.

Everyone is so interested in computers that there is little demand for real RTTY machines. They were loads of fun to use, had a fine smell of oil, sounded right (sorta like radial airplane engines did in their time too), and always needed a little tinkering. Mod 28s were better and the 33s were the last of that generally used by hams. My first was a Mod 14 strip printer and a TNC from the Navy that must have weighed 100 lbs.

If I was close to you, I'd give it a home. They can be easily run from nearly any TNC.

this was just a picture... i found it on the internet.....
my knobs have all the crome on them thanks very much.!
i haven't even polished them :)

as i said it even has the plastic on the face plate..
btw are you even interested it this radio or are you just causing trouble.
??

The Vibroplex Champion was produced from 1939 to 1979. They were made
with
wrinkle bases in black, gray, geige and sienna brown.
The Champion is esstially a 'Lighting Bug' with an economy damper.
Many,
many Champions were made.
For more information on Vibroplex and other bugs and keys, see the web
page below.

That's close, but not quite correct. One or the other will alternate being
back biased, and will shortly fail. Thus the half voltage, twice capacity
mis-conception. Put two of the same value and voltage back to back with a
diode of appropriate voltage and current rating across each to keep the
reverse bias to 0.6 volts. Most high voltage electrolytics will survive
that, but even that is not fail proof. It also generates non-linear
waveforms if the application is critical, like HiFi audio. New
non-polarized capacitors are commercially available as per other postings.

Sir:
To minimize confusion, this vintage equipment is commonly referred to as
MASTR Pro. Progress Line is correct, but in ham shorthand usually is used
for the all-tube type equipment built by GE from 1956 to 1963 more or less.
MASTR Pro (MASTR stood for Mobile And Station, TRansistorized) was
introduced in the early 60s and followed by Mastr II in the 70's, then Mastr
3 in the 90s. If you don't find anything available close to you up there,
let me know, although shipping from here may be exorbitant.

Hello,
It is as same as 6146B, you can substitute without any problem, if you have only plain 6146,6146A,6146W or 6293, they all will work fine.
Best luck.

I just got in to the hobby, not on the air yet but I passed the no code tech tests. and am waiting for a call sign.

I got an HT and have been using it as a scanner and listening to the nets on 2 meter and 70 cm. I'm looking at a booster for the car and further down the line a base or repeater at home, that is far off though.

Johnson Viking Valiant, looks new, in excellent,
all original, unmodified condition.
Factory wired unit, with manual copy. The best
one I've ever seen!!
Works perfectly. $495 or best offer. I will be
taking this rig to the
Rochester NH hamfest this coming weekend if it
doesn't sell here.
Prefer local pick up or delivery. Not sure if it
is too heavy for UPS??
73,
Chuck...K1KW

>with the tuning eye, the HRO dial and the art deco type front panel ?
The tuning eye and art deco front ID it as one of the early NC-100's.
Does it have the crystal filter option? i.e. an NC-100X?
Is it AC, external B+ and fil, or the 6V only model with the built in
vibrator power supply?
The non X, AC power model is most common, but all are getting hard to
find.

>The unit is in good working order. It does not have the original
>speaker, but a magnivox in a custom wooden cabinet. There is a little

>it's age it's one of the best I've seen. No dents, scrapes or anything.
>All the circuitry is orig except for one filter cap which has been
>replaced with a tubular below the chassis.
Assuming an AC non crystal filter version and based on your
discription, about $150-200. Recapped properly, and cleaned up it
would go higher.

If you're not a purist about appearance, buy two polarized electrolytics with twice the desired capacitance value and half the voltage rating, and connect them in series with the polarizations in opposite directions. That is the structure that is inside the "nonpolarized" electrolytic enclosures.

> djworthington@cybertrails.com

the BC-357 is an AM radio receiver, 62 to 80 Mc., input 24vDC
Receiver, Marker Beacon -- it apparently operates a relay in
response to received marker beacon signal.

RBB-1 info (from my 4 decades of collecting info!!)

made by RCA. 0.5 to 4.0 MHz, 4 bands; AM, MCW, CW
provision for connecting panadapter, or FS converter
super-het; IF = 400 Kc; Zout = 600 ohms; Zin = 70 ohms
115vAC, 60 cycles, 100 Watts input AC.

uses 6SK7, 6AB7, 6H6, 6K6, 5U4 and VR-105 tubes.

14 3/4 x 18 1/8 x 20 1/8" 79 lbs. orig cost $2500.00

was sold by Columbia radio for $75 in March 1965;
was sold by J.J. Glass for $49 in Oct. 1965

RBB-2

RCA CRV-46147

see above specs

input: 6.3vAC, 17vAC, 105vDC, 200vDC.
(my notes on this card say the 115vAC input is 400 Hz)

How come YOU can't be trusting enough to believe that the owner
of such an Original manual would be able and willing to make
"nice, clean copy" of it without sending it to a stranger?
All your promises make one rather suspicious, actually...

> kc4ktk

my index card says:

ARA receiver 190 kc to 9 mc.
28vDC input, similar to ARC-5
xtal control modification - see CQ magazine, 10/65, page 44

do you have the dynamotor that goes with it?
if so, the label should say what VDC output rating is.
you could either build a simple power supply of those ratings,
or build a 28VDC supply to run the dynamotor (probably not such
a great idea, as they are notorious for RF noise)

> Lawrenceville, GA | Guaranteed |

It's very likely that I've missed something here.

According to my SkyGlobe program the constellation lLeo will be about 15 degrees above the horizion starting at about 1:30 am on Nov and it will "set" (read drop below 15 degrees) at about 12:30pm (EST). The same is true for Nov 18.

Must we be able to see the meteor trail to work a contact?

Even if the shower won't be at it's peak here in North America when leo is up, I wouldn't expect it to be a step function (ie 100,000 meteors/hr...click...0 meteors/hr).

As I understand how this meteor shower thing works: the movement of the Earth in it's orbit around the Sun will cause us to pass through a cloud of space junk. On Nov 17,18 we will be moving towards the constellation leo.

While I'm thinking about this I see that the constellation leo will be down for *about* 12 hours. It is this 12 hour period which I would expect to be the peak of the shower. Being as how it's the middle of the shower. With this bit of reasoning, I would expect our (North American's) best shot at the Leonids will be on the moring of the 18th.

As I look at the constellation of leo, it's only about 25 or 30 degrees wide. How wide will the cloud of junk be as we pass through it? Seems like it must be larger than the whole Earth (180 degrees plus) or we would hoover up all of the meteors the first time we passed through the cloud.

Let me just say that I've never worked even one meteor contact so I clame NO expertise on this subject. It just seems that the rational may be a little bit flawed. No insult intended here! If I'm wrong please tell me so, and why.

Thanks

Gentlemen:

FYI, if anyone is restoring an old National receiver and in need of a new epicyclic dial (B-189-B), I have two of them. They are all black - knob, skirt and frequency wheel. They are in new condition (never installed) except one is missing a (knob) setscrew (should be two per knob) - I don't consider this to be a show-stopper. They're available if anyone has the need. Regards

HI PS. Help some young one along the way!!!!!!

Er, Yes. I have to scrape around and find substitute tubes, circuits, string, etc because I have not been earning for a few years. I find the discussions, tips, hints on these groups very helpful. I also learn a lot of "abstract" stuff like it's silly to use 6L6s just at the moment; but I know there are 101 tubes I can use instead, which have not been laid upon an altar by hi-fi magazines.

And suchlike.

404-328 is the 2.1 ssb filter. I just looked at my old Hw-100 and it has
one. Not sure the other , but should say what it is on the case of the
filter. Could be a cw filter , but not sure. MK

I think the one in the se is about the same as the ts-520. They have good noise blankers but need to be calibrated for best results. Also, if you have no noise, you will see no real difference. It's not until you get noise that it will come into play. Also you will see more of a difference when you have an actual signal that you are listening to in many cases. Also it will cause some distortion due to the reduced dynamic range when it is on and you have alot of noise. If you get noise and it doesn't seem to do much, realign the blanker. It's pretty easy if you have a manual. I recently bought a 830 and had to tweak the one in it. Now , works real good. And being variable, usually less distortion.

Sure wish those were 450 v computer grade. I need eight 180 uh /450 v computer grades for my henry amp. I guess I will have to use the 220 uh jobs that rf parts sells. I don't have much leeway in rigging up more caps as I want to keep things neat and original. I probably should just get me a big oil filled job. Thats what henry went to on the later serial number 2k classics. Mines a early version with a stack. MK

332. Question on SP600-JX11

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-04 00:00:00 UTC
From: cccacutts@mindspring.com
Message-ID: <6v7nsm$fl4$1@camel19.mindspring.com>
Source record: 97594

All,

I have a SP-600 that I have been told is a SP600-JX11. A photo of it can be seen at the following URL:

http://www.mindspring.com/~cacutts/radio/ba/sp600.jpg

My problem is that I can't find a manual for this model number. The radio needs a little work and I need a manual and schematic for it. I think I have some weak tubes on it but a few of the tubes have the markings rubbed off, thus the need for the manual. Any ideas as to where I should go next?

Thanks in advance,

Allen Cutts

Don't you think it's just a little immoral to spread
accusations about people without supporting evidence,
simply on the word or post of one individual?
What about people with kooks and bad guys
who've taken an unfortunate interest in them?
As you know from a recent thread, that concerns me
personally as I've become the target of
a couple of real loonies.

Human nature dictates that once you have accused someone
of something, that person is seen as "guilty" regardless
of facts. If I call you "thief" in public, then immediatly
apoligize and say I was wrong, you will still be suspected
as a thief in the eyes of the community forever.
That is the unfortunate nature of people.
In the majority of cases, the accuser is reacting
emotionally and irresponsibly to a misunderstanding.
There are actual crooks, but they are few thank God.

Accusations are very powerful. They should not be
spread about haphazardly in the guise of a "service."
If 3-4 people all tell the same story-- that's one thing.
Allowing anyone to post anything without backing it up
is immoral.

I will be happy to debate this point in a friendly manner
should anyone disagree. If someone cannot debate the point
and so wishes to engage in personal attacks,
please do so in private email.

Hello,
Earlier this year I aquired a Viking Ranger that is in really nice shape but unfortunately it has a short somewhere in the high voltage section which caused several of the contacts on the "operate" switch" (SW4 on the schematic) to burn open. If anyone happens to have a junker Ranger with this switch and is willing to part with it, please let me know. Also, since this is the first Ranger I've worked with, any advice on how to approach the problem in the high voltage section would be greatly appreciated. I'd love to have to have this nice little boatanchor on the air this winter!

Thanks,
Brian KB8IIC

I'm still spending money on it, so I better be enjoying myself.

Seriously, I just bought my first HF radio, a Ten-Tec Scout. I
consider it motivation to upgrade, since with my Tech + licence
is a bit short in the HF privileges.

Today I built my first antenna, a long wire approximately 150 ft long.
Tomorrow I contemplate a 10m vertical. This to give me something
to do on the air while I try to relearn enough code to be
intelligible.

Am I enjoying myself. I don't know, I am too busy to notice. :)

>(read drop below 15 degrees) at about 12:30pm (EST). The same is true for Nov
>18.
>
>Must we be able to see the meteor trail to work a contact?

No. We can get meteor trail propagation just as well in daylight as at night.
The "light show" is only visible at night of course.

>Even if the shower won't be at it's peak here in North America when leo is up,
>I wouldn't expect it to be a step function (ie 100,000 meteors/hr...click...0
>meteors/hr).

True. But the shower is supposed to be sharply peaked. At least it was the
other recorded times we passed through the heavy clump.

>As I understand how this meteor shower thing works: the movement of the Earth
>in it's orbit around the Sun will cause us to pass through a cloud of space
>junk. On Nov 17,18 we will be moving towards the constellation leo.

It is sort of like a bullet hitting a bullet. The Leonid meteors are screaming along
in their orbit, and Earth is trotting along in its orbit. The two orbits intersect,
naturally, or we wouldn't have a shower. The debris cloud is not evenly distributed
about its orbit. Most years the Leonids don't put on much of a show. But there are
a number of "clumps". The largest clump is the one we'll intersect this year, and is
the same one we intersected in 1799, 1833,1866, and 1966. (Timing is everything.)

>While I'm thinking about this I see that the constellation leo will be down
>for *about* 12 hours. It is this 12 hour period which I would expect to be the
>peak of the shower. Being as how it's the middle of the shower. With this bit
>of reasoning, I would expect our (North American's) best shot at the Leonids
>will be on the moring of the 18th.

The prediction is that the peak will occur over the Far East Pacific. Of course
it will be well below our horizon at that time.

>As I look at the constellation of leo, it's only about 25 or 30 degrees wide.
>How wide will the cloud of junk be as we pass through it? Seems like it must
>be larger than the whole Earth (180 degrees plus) or we would hoover up all of
>the meteors the first time we passed through the cloud.

The figure I saw said that the cloud diameter is about 300,000 miles, which makes the time to pass through it about 5 hours. Peak is estimated to be near the middle of that period. By the time North America is on the leading side of the Earth, the shower should have come and gone.

As Wes noted, prediction is an inexact science because gravitational resonances, mainly with Jupiter, can alter the debris clump from one orbit to the next. But this is the best estimate available.

Greetings,

I am ready to add the information on my web page about the FTV-650 6 Meter transverter, but I have one question.

The PA tube in the transverter is a 2001. Is this tube available, and/or, what is a substitute?

Could I get a copy of the tube characteristics from someone with a tube manual.

Thanks in advance,

Al, NW2M

PS: And thanks for the inputs/copies of the 6JS6C tubes :-)

dunno yet. i withdrew for almost ten years, gettting tired of dealing
with appliance operators, shit neighbors, and cb-ham operators.... guess
it's a sign of the times. now i'm getting involved again, dusting off the
tube transceivers and stringing up dipoles. i hv no interest in the
biggest/best/powerful. just having some basic fun.

I agree. Those of us who sell and trade gear should already be aware
that it is a buyer beware market. If you buy or sell by mail, you are in
more or less gambling. That is the price for buying in that fashion. If
a sure, 100 percent, warranted purchase is what you want, buy NEW gear
from an authorized dealer. I too have been burned, but I entered the
agreement knowing good and well the risks involved.

If you are close to Davenport, Iowa, you might want to attend ...

SALE OCTOBER 9th , 10th and 11th
OLD RADIOS, PARTS, TEST EQUIPMENT
Many bins of electronic parts, electrolytic, transformers
HAM EQUIPMENT
Complete ham satellite system
HDBX 48 foot tower with ham II and TH7
US Tower crank up with Mosely 67b and Yaesu rotor
Many accessories and transceivers

C BAND SATELLITE WITH C AND KU LNB�S
SAMS
OLD QST � FROM 1920�S

Sale will be held on property just south of Dewitt. If coming from the south, take highway 61 to Long Grove exit. Go to the east (opposite direction from Long Grove) to stop sign. Go to you left at the stop sign. Cross the river and the property will be just north of the river on your right. You will see the antennas.

From the North take highway 61 to the highway 30 east exit toward Clinton.
Get off on the first exit and go south. (The city of Dewitt is to the North)
The property is about 2 � miles to the south on the right. Again, look for
the antennas. Sale will be from 9 to 4 on each day. E Mail for more
information qvis@concentric.net

there is always leeway with MS contacts and showers. predicted peaks are good for predictions. so, getting skeds is one way to insure "something". another way is simply listen on 6 or 2 meters, pointed at the radiant. i did that a few years ago, in seattle, during the perseids. heard pings for several hours, and a couple of 3 and 4 second bursts. i managed a partial contact, the other end died out as he replied with his grid square. darn...

better reslts are had with lower freqs. i've read (in older QST issues), during sunspot lows, that MS contacts can be had even on 20 meters.

Agreed. Just in the past couple of years, I have been burned by a GPS unit that won't work properly, a MT1000 that has serious problems, a PRO2004 that never arrived, and a couple of other items.

But, it just gets to the point where you say what the heck, and walk on.

I got my licence in 1962. Have been active for 3 years and then the kids, the job, the travels forced me to stop.I retired early with one objective in mind...get beack my license and experiment again with what can be experimented in today technology by a simple technician. I then restarted two years ago focusing on antennas. Now I believe I understand 10-20% of them but anytime i make a QSO and talk about my experiments, tests,achievements and disappointements and I exchange my technical views, I get a lot of attention and many OM's express their satisfaction in hearing QSO's talking about technical experimentation against the many QSO's just talking about the weather.....
Our hobby should get back to its initial objectives and this will by sure attract lot of yungsters.

All the best Anselmo, HB9ICK- IZ3BGJ

Folks,

Just yesterday I ran into one of those things that give newcomers the impression that HAM radio operators can be elitist and exclusionary -- I was on the 14,247 kHz DX net on 20m, going through the rotation as usual when I got really slammed by one of the net control guys -- just for giving the DX station my name and QTH! It wasn't as if I was conducting an extended rag-chew QSO either -- The whole thing was over in less than 30 seconds. Apparently, it is only acceptable to give call signs, signal reports and 73's to DX stations on the DX net. Nevertheless, the language and tone in the rebuke was so completely out of proportion and uncalled for that I won't repeat it here. I have only been back in amateur radio for a month (after a 25 year hiatus), and it really gave me a cold feeling to think that other people just getting into HF might get this kind of treatment as well. People have to remember that lives don't depend upon the procedures used to work DX... We should be working towards maximizing the cooperation and pleasure of all amateur operators, or else we're all going to lose out. If I hadn't known that this was something of an aberration, I would have developed a bitter feeling about ham radio in general and HF in particular. As it was, it soured the experience for the rest of the day. I realize that nerves were a little ragged due to the QRM problems stemming from the California QSO Party, but that doesn't excuse rude behavior that is detrimental to the hobby as a whole.

Really. The old stuff is rugged. Almost everything electronic made today is made to be thrown away. There don't make like they used to.

>Oh, and anybody who's ever soldered knows it's *not* something one does

My luck has been good on the 10-15 prepaid purchases I've made.
Of course, during my required telephone conversation with the seller,
I describe myself as a hermit and always end the call as follows:

Seller: I'll ship once I receive your money order.
Me: Sounds great ... remember one thing.
Seller: What's that?
Me: I AM the NRA.

They said it WAY back in Nero's days...
CAVAET EMPTOR
(let the buyer beware).....I totally agree...
There are abuses on BOTH sides of the coin...perhaps some of us "Email vendors" should get a site publishing the names and Email addies of buyers who return THEIR used tubes in OUR new boxes, proclaiming "it didn't work"....but that shouldn't happen either. Unfortunately, the vast majority of upstanding, decent people have to absorb the s*** that the minority spews apon us. The only thing to do is maintain a level head, and go on...Cheer up though, there's still MUCH more good than bad in this world.

>Actually, Yes, I do find it objectionable. I object to the assumption that
>I MAY have stolen something.

Carl,

It is not done on the supposition that YOU stole anything. It is done to prevent the common scam where an EMPLOYEE working in concert with a friend, posing as a CUSTOMER sells said friend and item worth, say, $600, for the paltry sum of, say, $20.

This is a very common scam at all high volume stores, and if not interdicted, results in higher prices to the legitimate customers.

The existence of the exit check (aka "the final indignity") alone mitigates much of this inside theft. That's why they do it.

If you like to low prices, go with the flow. If you can't do it, shop somewhere else.

Don't take all this stuff personally, it will create in you a negative outlook in life.

Cheers,

TR

And since this thread has been oging on, somebody sent me this URL.
Hope it's agood for a few laughs..

The Fry's Electronics Employee Application Form

http://www.best.com/~braith/frys.htm

73 es GA from Jeff

(a) I've been accused of theft by Fry's
(b) I've been sold empty packages that were re-shrink wrapped
with *NO* notice of same.

However, I go back, with the thought that it's still a wider
selection and better price than Best Buy, CompUSA or Circuit City.

Caveat Emptor applies at Fry's as it does elsewhere.

Heh, should have seen the look on the returns employee when they
inspected an internal modem package to find
"Congratulations, you've been screwed by Fry's Electronics"
written in magic marker inside the package, across the manual and
"Defective, broken, used merchandise sold as new is
Consumer fraud punnishable in state of California"
written across the back of defective modem card.

Of course, thier first response was to accuse me of doing that.

I would NEVER buy repackaged anything at Fry's. If the packaging even looks suspicious, I pass. Of course, if the packaging looks OK, and the price is right, and I'm ABSOLUTELY sure it's what I want or need, it's off to the checkout and the final indignity.

I have found, on the few occasions I screwed up and bought something I couldn't use, that Fry's return system if just fine.

See ya at Fry's,

TR

I have 3 Drake items for sale:

1. Drake TR-3 looks good but needs some help. Not transmitting. Bought it from a ham said he never transmitted on it. Lights up fine, he also said it needs some work. I do not have the time to work on it. $79.00 plus shipping.

2. Drake AC-4 power supply with a on/off switch on the power line works fine
$79.00

3. Drake RV-3 looks good, also got it with the TR-3 untested, because the radio needs work. It lights up fine $79.00

UK pounds (sterling). Since basic comms was (allegedly) invented by americans, the only currency symbol that has become an inetnational standard is the dollar sign. The English pound sign (£), and a few other symbols, are outside the published standard and to a large extent are machine-, or even software-specific. Hence, general practice is to not use the symbol at all but an alphabetic abbreviation. You may also come accross GBP or occasionally UKL.

From: jeffreyh@Hawaii.Edu
Message-ID: <6vb9pc$oif@news.Hawaii.Edu>
Source record: 97403

I just began reading Archer's "The History of Radio to 1926" and am in the chapter relating the invention of the telephone. Bell and Watson are working on a project that will "multiplex" several telegraph operations on a single wire pair - they're using electro-mechanical tone reeds on each end of the wire - Watson is plucking a tone reed and Bell suddenly "hears" the tone on his end - he races down the hall and screams at Watson "What did you just do - don't touch anything - just show me what you did," and thus they're on the path to the invention of the telephone (the story of Bell spilling acid on himself and yelling for Watson is historical lore - Archer, the author of the book, knew Watson and even Watson says he doesn't know how that fable started).

At this point in the story, the author now begins discussing the telephone and the ensuing patent war - multiplexing telegraph signals is never again mentioned. What I'd like to know is this: Did multiplexing eventually involve utilizing the tone-reed concept so that each trans-mission would be sent using a unique tone, with the tone-reed on a receiving end only responding to the proper tone?

Also, this book belongs to the library - does anyone have a copy they'd like to sell?

Try your local T-shirt shop - the kind of shop that does silk-screens - it's a bit pricey - generally they want $25 to blow a "screen"- and since it's a one shot - they'll probably want some time $$ as well... but - if you scan the front panel - use photoshop or similar to "clean it up" - then blow the screen from that - you can match original quality. A friend of mine restore some Citation Amp front panels that way - and setting next to originals - you can't tell them apart (expect his are truly "mint"). 'Course the place where he works has a huge graphics department - with considerable talent - and since he owns the company - they do his "side projects" with a wink and a smile <g>...

good luck - and let us know if you give it a go (btw - if I were doing it - I'd get the screen done - and try some "samples" on a finish like your panel WILL have - before you actually do anything to your Halli's panel - that way if the screen shop, etc. isn't quite up to the task - no harm done - you're just out a few bucks!...

best regards...

Well this is true if you live in Germany....they have a student
license.... They can work only stations inside Germany..... If you are
in the United States.....forget it!

There is no license requirement to *buy* ham radio gear.

> It's permissible to transmit on the ham bands
> as long as you are practicing for your license.

It is *not* permissible to transmit on the ham bands
as long as you are practicing for your license.

It's illegal.

Looking for National "dog hose power supply" and original plug-in coil sets for SW-3 radio. Power supply should be for AC version of SW-3, which provides 2.5 v AC filament voltage and about 150 v DC plate voltage. Please reply to kb9olm@hotmail.com

You'll find that the Ten-Tec Scout is a really good radio.
I own one and love it. I also went from Tech (No Code) to
Tech Plus to General to Advanced. If one spends 30 to 60
minutes EVERY day practing the code (in 15 or 20 time slots),
you will learn it anad improve. Some learn quickly, some
(like me) take forever to learn it. Still if you keep at it,
you'll reach 13 WPM. Reaching General buys you a lot of
HF operating room. Given that we're on the upswing of the
Sunspot cycle, some exciting contacts are coming up.

Do I love the Hobby? Well, if I didn't, I sure wouldn't have spent 20 hours this past weekend working Ham Radio communications at the Long Beach Air Fare. (Long Beach, California) <smile>

Oh yes, my 16 year old son, Michael (KF6LJA) worked with me.

HAM RADIO: No Pay, but lots of fun. :-)

I agree totally. The "old timers" (I don't think they are really old at all) and "newbies" should look and see in not CW vs phone which is the enemy, its ourselves and inactivity. I yearn for an armchair DX QSO; usually its impossible unless you're on 17 or 12. 160-40? Rated X ! Unless you are "in the crowd" on the local repeater, 2m simplex is the only place to go. I love ham radio, but at 32 I find myself wondering what a $2000 radio/antenna investment will be used for in 10 years.

Hi ! I have an early DX-100, but it's not working.. However, it's all there..
If you get a significant response, and if someone has a parts rig, I need a VFO circuit for this TX..
It needs to be a total, known-to-work VFO
that I can just bolt down, wire up and go...
Thank you,

Curt,

That's the problem with most DX nets--only interested in a 59 and a QSL. I'm not knocking that, but if you want more, try calling CQ or look for DX stations other places on the band. Seems like the phone pile-ups have been rather unruly lately. Try CW--it's a bit (just a bit at times) more civilized.

Sounds like you and I got into the hobby about the same era...have the same beef's about all the foul / silly language and foolish/childness I hear on....funny...don't hear that tripe on CW heheh. Think up here, at least, the gov'ts attempts to make licensing easier have definately resulted in a bunch of people getting into the hobby who are not really interested in radio experimenting at all. No knowledge breeds no idea what to talk about in my books - Am trying my darndest to foster a hands on tinkering radio club here, while extoling good operating procedure (and WHY it works better)...if yer ever through Moncton, N.B. drop in for a cup of coffee eh!

Welcome to the new ham (cb) radio. Thanks to lower testing standards, attitudes, the ARRL, and appliance operation, ham radio has finally become nothing more than a licensed cb type operation.

WRONG!!! The only way someone unlicensed can transmit on any ham band is
if a licensed ham is acting as 'control operator'.

I orederd some 2, 6, and 10pf NPO caps from them. Listed in the
catalogue as .1 lead spacing. What arrived was .2 lead spacing, not
useable in my application so I sent them back. Called to get the credit
on my account and the clerk said I needed to talk to a tech rep and she
got him on the line. I explained the problem and he wanted to know what
was wrong with the voltage(duh). I explained "Nothing, with the
volatage" and asked if he was familiar with the caps, Reply was "Sure
they are non-polarized capacitors" When I explained what NPO meant he
huffily said "Give him the credit and hung up"

Fry's does not have a corner on the dumb market.

J
> Well, do the automobile ads prompt unlicensed drivers to buy cars?

Can't answer that question.

> Will the highways be populated with unlicensed drivers due to the
> car ads?

Already are around here.

Do car salesmen check to see if a buyer is licensed?

They do around here. Before I was allowed to test drive the last car we bought, they wanted to see my driver's license. In Virginia, if a person with a license suspended for DUI reasons is caught driving, the car is impounded for 30 days. Storage fees run about $12-15 a day, plus the tow bill. Not many car lots want to get stuck with that.

What are you guys talking about?

Would please explain the issue?

Thanks,

Francesco

There are some Ham equipment dealers who will not sell to an unlicensed person. I know that AES is one of them. They will make an exception if they can verify the radio will be a gift. A few years back, my wife got an HT for me and ordered it through AES. They wanted my callsign and verified her name, my name, and the information before they would ship it.

I personally like their stance in this regard and I myself subscribe to it. I have refused several sales of amateur transmitting equipment because the person could not produce an amateur license.

NO.....6146's are incorrect. Uses TV sweep tubes, Possibly 6LQ6's.
Just not sure.....been too long. The Tempo was built by YAESU.

434. 4400 volt 2 amp pole pig xmfr $75.00

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-05 00:00:00 UTC
From: zeitler@ibm.net
Message-ID: <3619ac83.0@news1.ibm.net>
Source record: 97442
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

it is two xmfrs on the same core mounted side by side. Each is 120 volt primary with 2200 volt secondary. I ran them in series for 240 volt primary with 4400 volts out. Used with a 4-1000 amp. The xmfr is rated at around a few amps. This thing is incredibly huge and heavy. Weighs around 125 pounds +/- 25 pounds. Really prefer NOT to ship but it is possible. Of course you will pay much more for shipping than the cost of the xmfr. Shipping will be very, very expensive if you need it shipped.

Cost for the xmfr is $75.00. I'm in San Diego zip 92139.

Steve:

Here's what Gary sent:

I'm selling off some more Swan gear, in preparation for my move from the spare bedroom shack to the basement cubby hole! I'm keeping 4 or 5 of my favorites, but the rest of the stuff has to go.

1200X amplifier, c/w manual photocopy, works OK, shows well. $225.00

SW-120 parts rig. Clean face and chassis, all tubes, missing one crystal, broken PA cathode current meter movement. $50.00

Model 260 5 band hf rig. Woks well on all bands complete with mike. Shows well, c/e manual copy. $150.00

FM-2X 2 meter radio c/w power supply. Untested. $35.00

HFM-200 SWR / Power meter c/w remote head. Nice. $35.00

FS-2 meter. Nice. $30.00

350C 5 band hf rig. C/w manual copy, very nice physical condition, does not transmit. I started working on this one a couple years ago, got as far as the 7360 tube, (with nothing coming out) and quit. Full set of tubes, all tested good, no power supply.
$100.00

Model 405 crystal osc. Like new. $35.00

Homebrew power supply c/w both cords. Well made. $50.00

Thats it for now, please e-mail me direct.
All prices USD
Shipping not included.

I have a average looking RCA VICTOR Model 15K AM radio receiver.
Vintage 1930'S.
Its a stand up console probably about 100 lbs. Front grill good
original. Two different knobs. Some scratches on the front. Quite a
few scratches on the top. It turn on and the green eye lights up.
There is some noise, and crackling like some dirty pots. Have not
received any stations. $199.00 pick up only in Los Angeles, I live 2
miles for Los Angeles International Airport.
Leo Ph/Fax (310) 670-6969.....Thank You.....

Dear OM,

Please helpme, I am a 40 yo Brazilian medical doctor, I have many HRO M and 5, but they do not have the HF (3-30 MHz) coils. I beg you, where in the States can I find these coils?

It's a pity, the sets have been painfully restored. I only miss the coils.

I have a friend in Florida that can do the shipping and paying. Please help me to restore my wonderful collection to integrity. The radios belonged to an airline, a barbarian has destroyed the coils, believe it or not.

Hi John

Well, to answer your question as quick as possible. YES !
I am still on the air, first licensed in the early 1960's. Been
on the air ever since. I still build some gear, but not as much as
I used to. I have a shack full of Heath kit gear that helped teach me
soldering techniques, as well as trouble shooting. I enjoyed it so
much that I did make it a career. Just retired after 34 years as
a communications/radio technician. Worked on UHF and VHF
radios, handheld, mobile, base stations, repeaters etc. Also was
involved in data communications.

I won't begin to think that I could build a solid state SSB multiband
transceiver from scratch, but I do enjoy building regulated power supplies
and various shack accessories as well as various antenna's.

It was and still is a GREAT HOBBY, and the interest even put
food on the table and clothes on our backs. We, being my wife
and daughter.

I think we get out of a hobby, just exactly what we contribute
to it. I have had the pleasure of making friends all over the world
via HF on many different modes. I hope to continue on doing
so for at least another 30 years. I'm 55 now, so there is a good chance.
Not to mention all the new friends I have made by helping instruct
during the Ham Classes every year to help others become Hams.

As far as getting on the air, I do every day. Even if it's just for a quick
single contact. I also put some vintage gear on the air (made in 1943)
on November 11th. Of course it is on CW, and I issue a special colour
certificate and QSL card for anyone brave enough to have a 2-way contact
on 40 meters with me. I take great pleasue using that particular piece of
equipment (an old army WW II # 19 set) as it is also 55 years old.
We both still function, after all that time.

7 3 John

I like TA, and I shop there, but remember that it *is* Radio Shack.
Don't expect the employees to know their stock. They're as likely
to give a "do you want fries with that" response as to be helpful.
Spend some time learning the store and its stock and you'll be
able to find what you need. They do stock an incredible array
of parts.

Well now, I can (and have) dropped a solid state radio 36 inches onto concrete.
Picked it up and it was still working. I doubt most tube rigs could do the same.
Solid state is very rugged. The old stuff is just heavy. (Maybe that's why they're
called boat anchors.) :-)

Hello, group. A young fellow has recently written to me asking for tubes for the
TEMPO ONE SSb tranciever. He has told me that his grandfather had just passed away, and had left the unit for him. Unfortunately, Grandpa removed all of the tubes from the Chassis, and this young man doesn't know where or what tubes are supposed to be in there. I know there are a lot of good HAM folks out there who will help this potential new amateur operator by providing him with a manual and/or a tube layout chart. Here is SCOTT EDWARDS Email address:

lvs53@midwest.net

Also below is the last Email Scott sent me. Please help me help him to help you someday! Thanks so much in advance, Scott's message follows. JOE

Subj: Re: Tubecntral reply
Date: 10/5/98 1:19:13 AM Eastern Daylight Time
From: lvs53@midwest.net (vicky edwards)
To: TUBECNTRAL@aol.com

Joe,
Thanks for your time. I have had a hard time finding someone who knows about this rig. I myself know nothing about it. On the front it says TEMPO one SSB TRANSCEIVER. It doesn't say anything else except on the back it says the famous made in Japan. I would greatly appreciate it if you could find somebody who knows about it. On the front of the radio it has a big dial knob which I suppose tunes in your channels. Maybe this person who you can hopefully can find will have a owners manual. So I hope the information I gave you will help you. I know it is very sketchy, but I don't know much about the radio. Again thanks very much for your time.

Scott Edwards

Thank you,
Joe Pratt, Tubecntral@aol.com

Mallory makes a PSU series that ranges from 25 to 1200 MF at 330 to
110VAC. GE has a 97F GEM series that ranges from 3 to 120 MF at
440 to 240VAC.

These are available from many electronics suppliers. I looked tham up
in a Newark Electronics catalog (1-800-463-9275).

478. Need Specs for VU111 Tube

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-05 00:00:00 UTC
From: "James R. Binkley" <w4aos@his.com>
Message-ID: <36190FF8.24FDF032@his.com>
Source record: 97486

I have a couple of tubes marked VU111, with 10E/146 marked
below that.

They are a little smaller than 807's with a plate cap and
four pins.

They appear to be well made, with ceramic spacers within the
tube.

As near as I can tell they are directly heated trodes,but
not positive.

No information in any of my books, someone thought they
might be british telephone co. tubes.

Any information appreciated

Bob w4aos

Hi Curt,

I've noticed similar things with some of the various nets and some operators in general. Personally, I never use the DX nets, I'd rather work them on my own. Anyone can work DX if the guy is waiting to hear you. If you can't, you'd better be thinking of a new antenna system. However, in the support of these nets, they do tend to lesson the QRM on the bands by keeping things a bit more orderly. I've learned to just ignore the attitudes of some of these people. I think that maybe a lot of them are bitter old men (not to say that all old men are bitter, hell, at 47 I guess I'm considered an old man HiHi) who long for the good old days of tubes, crystals, AM and resist change and things they don't personally like at all costs. For instance, this last weekend during the Cal QSO party, on every band I operated someone would show up and throw a carrier on top of my cq's. Since I have a modern radio with auto notch they weren't very successful in bothering me but they might have chased away a few trying to call me. I'm sure it wasn't directed at me personally since I've never made an enemy on the air (that I'm aware of). I'm sure it was just some dork who doesn't like contests since he's no good at operating that mode and figured that he'd single handly run everyone off the band. It didn't work. The contest continued without his approval. Probably someone who tells the same story to the same guys on the same frequency at the same time everyday and just didn't know what to do for and entire day without his 'sked'. Pretty sad person in my opinion! I don't understand it anyway, everyone knows when the contests are (if they read QST) and could easily make arrangements to move their skeds way 'up' the band where most contesters don't go anyway. Just arrogance and stubbornness in my humble opinion. A few contests ago I heard one old coot literally screaming at someone to move off 'his' frequency. The poor guy eventually did, only to have someone else move in a bit later and start calling cq contest so he gained nothing! When there's a contest, the bands are crowded, get over it guys!

Jim
Call withheld to avoid future carriers that might be directed at me personally

481. repainting boatanchor front panel WITH lettering?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-05 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <6vb37hdub1@supernews.com>
Source record: 97489
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Is there anyone who can repaint a "boatanchor" front panel
and restore (i.e., repaint) the original lettering?

Fixing the cussed bandswitch on my Hallicrafters SX-42 required
pulling the front panel. As long as it's off, I'd like to repaint it, but I
obviously don't want to lose the lettering.

Thanks.

Phil Nelson

John OM,

I am happy to answer this question. YES!
After 43 years of being continously active on the air, I am still of
the opinion that ham radio is the world's best HOBBY (and I have a few
others to compare it with, too). I am on the air daily, CW mobile, and
will be back on from my (new) home QTH as soon as I get my tower
re-planted and the HF arrays back up on top. I'm a CW op mostly, but
enjoy FSK too. I run homebrew XMTRs and RCVRS as well as older gear (in
my experience, homebrewing has never been easier, cheaper, or more fun
than it is today, contrary to what I hear from those who do not engage
in it). Also, there are an awful lot of excellent ops out there, which
(still) makes ragchewing such a pleasure. CU on the air.

73,
Don, W6JL

483. GASSY tubes...MAALOX, or waste basket?

Newsgroup: rec.radio.amateur.boatanchors

Source record: 97491

Hello, I have a very nice 245 globe that tests excellent, except for the fact it had a bit too much of mom's lasagna... the gas readings on the TV-7 are about three
divisions higher when # 4 & 5 buttons are pushed. I read in 'Tube Lore' that you can indirectly heat the getter flashing with a small flame while operating the tube at full output, and thus reducing or eliminating the gas. Is this true, and has anyone tried such a thing? Jim McShane was kind enough to clue me in on using a high-voltage P.S. to run the tube's plate current way up for awhile... any results there? I don't want to ruin a good display tube by botching anything up, as this is the first gassy one i've had.Thanks to all, please respond also to the group so others may have potential benefit.
Thank you,
Joe Pratt, Tubecntral@aol.com

Message-ID: <36191B0C.42B9@ix.netcom.com>
Source record: 97492

Joe:
I've had success with some gassy tubes by
baking them in the oven at 300 degs. for
half an hour. Also with carefully, evenly
heating the entire envelope with a low
gas flame. Heating just the getter spot
risks cracking the envelope.
I had a 7591 that was very gassy.
It required several heat treatments plus
two days with just the filaments runnning,
but I finally got rid of the gas and it
worked like a champ.

I'm working on a new process that will do the
same without the risk and trouble of
heating the glass, but I don't have it
down just yet.

After 22 of holding a General ticket I finally have the time and to put together an HF station at the house. I have spent most of my time on 2 meters mobile and enjoyed many great QSOs and made quite a few new freinds along the way. One finally gave me the incentive to get on HF.

After convincing the wife to let me spend over $1000 for the rig, antennas, coax, PS and all the other odds and ends I fired up the station. By the time I was ready, the wife had gone to bed. I WAS GLAD SHE DID. Tuning though 80 meters brought back childhood memories of CB. Foul language, power strugles for frequency control, jamming, bad mouthing fellow hams, music, whistling, JUNK. What a disapointment! What happened to the hams I heard when I was young on the old short wave radio? I figured I'll try another band, 160 Meters. Not much different, just a lot more static. Here the thing to do seems to be to run a KW and have your freinds turn down their RF gain to loose the static, and any station trying to break in. Well I went to bed that night very disillusioned.

Before that night I was pushing my kids to get a Ham license. NOW I WILL NOT EVEN TURN ON 80 METERS WHEN THE KIDS ARE IN THE ROOM.

Next was to set up HF in the RV. Not a real problem. Put a 20 Meter Hustler on the roof, power to the rig. Works fine. Got some time that night to turn on the rig with the family sitting around. First contact Alaska from New Jersey. I was impressed and I think the wife was too since she was used to Delaware from NJ as a long contact. Any way, 2 minutes into the QSO other stations popped in to make the contact with Alaska cutting my QSO short. (OH well) Next, some station in the old USSR. That impressed everyone, but, the whole conversation was "You are 5 5 thanks for the contact. QRZ".

Is that all there is to HF Ham Radio?

Well since I am a tinkerer by nature, I still put up another antenna and spend hours tunning it and laying ground radials and protecting for lightning and putting connectors on coax and once in a while check out 80 Meters when everyone has gone to bed.

Bring the young into the hobby??? Have them hear the name calling, the rudeness, the foul language from across the US. (And why is it only across the US, other countries don't seem to talk that way on the air) I don't think I could sleep at night.

I find my self questioning why I do it.

Please consider looking for a Ham Radio Club:

http://www.arrl.org/field/club/clubsearch.phtml

This link will provide you with a listing of many clubs in your area.
Not every club will be right for you. Different clubs have different
interests. Go to several clubs and find the one you like.

WHY JOIN A CLUB?

As a newcomer to the hobby, you can learn a lot of those who have tried
a lot of different things. They can tell you what are the best repeaters
and what repeaters aren't so great. In my area, LA, some repeaters receive
a lot of action, while others receive little use. Some have WIDE coverage,
some are limited coverage.

NETs are a great way for a new Ham to start out. (Even some of the "Old
Timers" enjoy NETs.) Just like the clubs, every NET is different. Some
have a lot of check-ins and your time to say something is limited. Others
have a limited number of check-ins and you may have more time to talk.
Some NETs even "play" guessing games.

Did you know that some Hams work events too? Yes, some Hams help provide
communication support for races, Air Shows, ... and other public non-profit
events. You won't get paid for your work, but you can have a lot of fun.
Plus, working an event allows you to see things and do things the general
public can't.

The clubs in your area will be able to tell you all sort of interesting
things in Ham Radio, that you can do.

73,

BOB
KQ6WQ

Interesting...

Wait a minute. HF still requires a code test doesn't it?
>From the way some people carry on here (and especially on .prolicy)
you'd think this behaviour was limited to the no-code techs.

Oh, wait, he must have been lucky and just *happened* to hear the
3 lids on the HF bands. Surely everyone else is civilized. HI HI.

I turn the rig on, and I hear the same stuff *if* I tune around for
it. However, when I do, I just tune right past it to a clear spot and
engage in the type of QSO I want to take part in.

Nothing personal, but you'd think HF radios didn't come with tuning
knobs the way some people go on about it.

Go for it!!! Remember that practice, practice, practice will get you there. On business trips I'd plug a code tape in the tapedeck (or in the Walkman if on a delivery truck...I know, I know..don't use them while driving :)) and listen to code going down the road. Only problem with this is that it takes one element out of copying code away...putting it down on paper. So, do plenty of listening but be sure and practice actually putting what you copy down on paper.

> intelligible.

Sounds like you've got some territory to play with. If you have a pretty good size tree try throwing a fishing line(with heavy weight on end) over the top of it. Tie a stronger cord to this and reel it back over the tree. *Then* tie your wire to this cord and pull the wire back over the tree, thus having a piece of wire laying over the tree and draping to the bottom on both sides. Bring these two ends together with insulators and add a matching section of coax and you end up with a very nice, albeit low altitude loop antenna. The one I made used a pecan tree and speaker wire....excellent results. Consistently walking up and down the east coast, dipping into Canada and out to the West Coast...all at a mere 1.5 watts with CW.

>

I've actually only been licensed for a couple of years now, and due to some hectic times I've become distanced from amateur radio. The other day a friend of mine inquired about shortwave radio. We talked and he decided he didn't have the funds for the time being to get involved in it. Well, I went home, found some plans for a regen receiver and now he's got the original "tupperware dish" regenerative receiver.<g> Maybe the OM upstairs used him to tell me to get back involved? :) It has peeked my interest again....time to go repair the antennas!

Eric, if you haven't already done it you ought ot get a mag-mount 1/4 wave antenna to put on top of your vehicle...it's amazing what a resonant antenna will do for your HT...you'll think you've got a amp hooked up. :) Also, at the house a small home-made groundplane 1/4 wave antenna up as high as you can get it will do wonders.

Congrats on the no-code...but don't stop there!!!! Go for the gold!!!!!!

Wait a minute. HF still requires a code test doesn't it?
>From the way some people carry on here (and especially on .prolicy)
you'd think this behaviour was limited to the no-code techs.
Oh, wait, he must have been lucky and just *happened* to hear the
3 lids on the HF bands. Surely everyone else is civilized. HI HI.
I turn the rig on, and I hear the same stuff *if* I tune around for
it. However, when I do, I just tune right past it to a clear spot
and engage in the type of QSO I want to take part in.
Nothing personal, but you'd think HF radios didn't come with tuning
knobs the way some people go on about it.

amateur.antenna,rec.radio.amateur.boatanchors
After 22 of holding a General ticket I finally have the time and to
put together an HF station at the house. I have spent most of my
time on 2 meters mobile and enjoyed many great QSOs and made quite
a few new freinds along the way. One finally gave me the incentive
to get on HF.

After convincing the wife to let me spend over $1000 for the rig,
antennas, coax, PS and all the other odds and ends I fired up the
station. By the time I was ready, the wife had gone to bed. I WAS
GLAD SHE DID. Tuning though 80 meters brought back childhood
memories of CB. Foul language, power strugles for frequency
control, jamming, bad mouthing fellow hams, music, whistling, JUNK.

What a disapointment! What happened to the hams I heard when I was
young on the old short wave radio? I figured I'll try another band,
160 Meters. Not much different, just a lot more static. Here the
thing to do seems to be to run a KW and have your freinds turn down
their RF gain to loose the static, and any station trying to break
in. Well I went to bed that night very disillusioned.

Before that night I was pushing my kids to get a Ham license. NOW
I WILL NOT EVEN TURN ON 80 METERS WHEN THE KIDS ARE IN THE ROOM.
Next was to set up HF in the RV. Not a real problem. Put a 20
Meter Hustler on the roof, power to the rig. Works fine. Got some
time that night to turn on the rig with the family sitting around.
First contact Alaska from New Jersey. I was impressed and I think
the wife was too since she was used to Delaware from NJ as a long
contact. Any way, 2 minutes into the QSO other stations popped in
to make the contact with Alaska cutting my QSO short. (OH well)
Next, some station in the old USSR. That impressed everyone, but,
the whole conversation was "You are 5 5 thanks for the contact.
QRZ". Is that all there is to HF Ham Radio?

Well since I am a tinkerer by nature, I still put up another
antenna and spend hours tunning it and laying ground radials and
protecting for lightning and putting connectors on coax and once in
a while check out 80 Meters when everyone has gone to bed.
Bring the young into the hobby??? Have them hear the name calling,
the rudeness, the foul language from across the US. (And why is it
only across the US, other countries don't seem to talk that way on
the air) I don't think I could sleep at night.

I find my self questioning why I do it.

Maybe I'm too thin-skinned but what worries me in the UK, and on 2 metres against top band, is not foul words but cruel and inhospitable snide remarks, especially to strangers to the local repeater.

I gave up Packet because it seemed to be a contest for the cleverest remark; plus a significant 10% (maybe 20%) were taking their battles into real life and involving the legal profession; even complaining to the police of threats (on air) of violence.

As time went by I noticed some of the worst offenders taking their seats on committees which more and more control the hobby for others, by bending the ear of the licensing authorities.

It seems to have turned sour; and the pleasure for the moment is here on the Net.

And just what does that make the "friend"? Tapdance all you want, but the exit check is based on a management decision to treat all customers like shoplifters in the hope of discouraging the few who might have such intentions.

> This is a very common scam at all high volume stores, and if not
> interdicted, results in higher prices to the legitimate customers.

And there are ways to deter and prevent such crimes. The foremost of which is simply prosecution when the crime is detected. Most "high volume stores" use computerized cash registers on which the checker cannot even enter a price at all, getting the price from the computer based on scanning the Universal Product Code (UPC) barcode. It would be possible to skip scanning an item, but it is very tricky to enter a false price into any such system from the register.

> The existence of the exit check (aka "the final indignity") alone
> mitigates much of this inside theft. That's why they do it.

If anyone is stupid enough to believe that exit checks deter the kind of theft you describe, then they deserve both the losses they would be taking and the costs of the totally ineffective "precaution."

I have yet to see any store where a routine exit check was more than a count of items (and usually a very sloppy count at that). A line by line comparison of each item with the register receipt COULD catch some of the kind of theft you suggest -- at an enormous cost to the retailer (far more than the cost of such theft) and would ensure that the company went bankrupt for lack of customers unless they held an absolute local monopoly on some completely essential product.

If there is any further discussion on this thread could you please
check the groups header and delete REC.ANTIQUES.RADIO+PHONO?

This is getting crossposted and has nothing to do with antique radios.
Thank you....

Well, I patronized them numerous times before they moved to the new, smaller (horrible) quarters where you couldn't see or do anything. No wonder people would not go there. It was terribly small and they had almost nothing you could look at.

I was sorry to see it go, but are you sure that you are laying blame on the right source?

MRC was a great shop back when they allowed the meetings there, the library was great, and the store was easier to shop in.

The free parts exchange/magazine exchange was a great heolp to me, and the TUBE BANK was an awesome idea!

If only SOMEONE in the DC area would maintain a TUBE BANK now, I would certainly contribute to it and use it!

I was just sorry they had to move it from behind the Toyota dealer. After they opened the new place I only went in once. That was enought o put me off!

I will forward your comments to the DC BOATANCHORS mailing list and see if others have comments.

523. Help needed to identify HRO psu

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-06 00:00:00 UTC
From: C.Wright@dera.gov.uk
Message-ID: <6vd45o$3ck$1@trog.dra.hmg.gb>
Source record: 97333
Cross-posted to: rec.radio.amateur.boatanchors,uk.radio.amateur

Greetings.

I have just purchased a National Company HRO-M (my second); it is a "Variation 5" 1943-5 vintage with the non-illuminated Marion Co. milliammeter as S-meter, and bar knobs with circumferential calibrated metal skirts (including the Selectivity knob). The crystal filter is internal to the phasing box.

The power supply that came with it is not the "doghouse" type. It is an 8" metal cube, power switch and indicator light on the front panel, rear panel hinges down allowing access to the interior. It has a brass plate on the front bearing the following data:

Supply Unit Rectifier No. 5
Cat. No. ZB 0179
No. 1942
PSEI Ltd

It also has a label on the front, silver on a black background, with the callsign WD8PDG.

Can anybody identify this PSU? Was it British made (ZB is probably a British military number) for American-made HROs? Who was PSEI Ltd? What is the significance of the US call-sign?

The previous owner (a SK) probably owned this receiver for the last forty to fifty years.

Any help gratefully received.
from
Colin Wright

Curt,

I am sorry about your experience. May I suggest that you give the WARC
bands a try?? I have found a great bunch of people on 12, 17, and 30 meters.
There are a few DX hounds, but for the most part hams on the WARC bands are

courteous and considerate. These bands are also the place to go when "contest weekends" take over the other bands.

ZB 0179 is a typical VAOS number (Vocabulary Army Ordnance Stores), so it is a British-made PSU; the HRO was known in British Army usage as an R106, and was used for intercept-type reception in fixed and truck applications. I think from memory that PSEI stands for Peto-Scott, but I could be wrong...

Best regards
Chris Clotworthy GI7TEU

Brian -

I certainly am - to me a transmitting tube isn't medium-sized unless it can produce at least 500 watts of RF (1 kw for a paralleled pair). A large tube does at least 5 kw. I've worked with single-tube output stages that deliver 10 kw at AM freqs, others that do 25 kw at FM freqs and one that does 10 kw peak visual in UHF TV. Of course, I've never worked on anything =really= big, like a 500 kw shortwave transmitter. :)

>intentions.

Believe that if you wish, but it sure sounds cynical. Or do you have
something to hide when you leave the store?

>> This is a very common scam at all high volume stores, and if not
>> interdicted, results in higher prices to the legitimate customers.
>
>And there are ways to deter and prevent such crimes. The foremost of
>which is simply prosecution when the crime is detected.

That's exactly the point. They are trying to "detect" the crime. Why is
that so hard for you to understand?

>Most "high
>volume stores" use computerized cash registers on which the checker
>cannot even enter a price at all, getting the price from the computer
>based on scanning the Universal Product Code (UPC) barcode. It would be
>possible to skip scanning an item, but it is very tricky to enter a
>false price into any such system from the register.

It is very easy to manually enter a UPC number. It is done every time the
scanner fails to read the number properly. Duh.

>> The existence of the exit check (aka "the final indignity") alone
>> mitigates much of this inside theft. That's why they do it.
>
>If anyone is stupid enough to believe that exit checks deter the kind of
>theft you describe, then they deserve both the losses they would be
>taking and the costs of the totally ineffective "precaution."

Explain to me why, in your estimation, someone would "deserve" to be stolen from. How does that work? What's next? He deserved to be shot? She deserved to be raped? These are, after all, crimes aren't they?

>I have yet to see any store where a routine exit check was more than a
>count of items (and usually a very sloppy count at that). A line by
>line comparison of each item with the register receipt COULD catch some
>of the kind of theft you suggest -- at an enormous cost to the retailer
>(far more than the cost of such theft) and would ensure that the company
>went bankrupt for lack of customers unless they held an absolute local
>monopoly on some completely essential product.

Well, I hate to confuse you with the facts, but Fry's is hardly bankrupt. And based upon the pricing they offer and the traffic and sales they generate, they appear to be doing quite well. Based upon your criteria.....

The facts do no support your position. Since you dislike Fry's so much, and claim to have all the answers, when are you opening your store?

545. 6550s tested on a TV-7????????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-06 00:00:00 UTC
From: cccacutts@mindspring.com
Message-ID: <6vdrr9$1dl$1@camel21.mindspring.com>
Source record: 97355

Someone on eBay has a pair of Tung Sol 6550 tubes that he claims were tested on a TV-7. I thought I had the latest TV-7 manual but no where in the settings does it list a 6550. The reason I noticed is that I have 4 6550s that I was going to test on my TV-7D/U and there was not a listing for them. I ended up testing them on my Hickok 799. Am I missing something here?

Anyone have an old Mallory headphone plug? It has wide screws internally and accepts headphone tip plugs and also has an internal cable tie hole. As I recall, it had a black cover about 1/2'' OD, and the cable end of the cover said "Mallory" or "Mallory-Yaxley". I want to use a set of Trimm 'phones without destroying the tips and this would be the most effective way to do it without making a "kluge" adapter.
I had a bunch some years back, but these are now gone. Grateful if you could sell me one from your junk pile.
Thanks and 73 to all.....Stu, N1SC (Oregon)

555. FS: SCR-183 Command Sets

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-06 00:00:00 UTC
From: doragsda@polymail.calpoly.edu
Message-ID: <6vdmickfn1@cscnews.csc.calpoly.edu>
Source record: 97365
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have the following components of prewar/early WWII aircraft radio set SCR-183:

Transmitter BC-AS-230. Made by Philco. Includes all tubes (including the two VT-25's). Have not tested tubes, as they appear orig. and are clamped in and clamp screws have glyptol on them - I don't want to break the orig. seals. Unit is in excellent condition and looks unused.

Receiver BC-AS-229. Made by Philco. New in the original box. With all tubes.

Radio Control Box BC-AR-231. Made by Western Electric. A little banged up, but good condition.

Transmitter Coil Set C-432 covering 3200 - 4000 KC. Excellent.

Receiver Dual Coil Set C-379. Low Range 201 - 398 Kc, High Range 2500 - 4700 Kc. Very good.

Shock Mount FT-99 - for the receiver. Very good.

A 12 foot splined tuning cable for the receiver.

I believe these are ALL of the components I have. I might have one more transmitter tuning coil stashed away, I will check again. I will also include two carcasses of one each transmitter and receiver, many parts missing but there are two VT-25's in the transmitter carcass.

I have pictures of most of the above at:

http://www.calpoly.edu/~doragsda/images/SCR183A.JPG
Other files in same directory are SCR183B.JPG, SCR183C.JPG, and SCR183D.JPG

I am asking $250.00, plus shipping from zip 93401 for all of the above. I won't be insulted if you make an offer, as long as you're not insulted if I happen to turn it down :-).

Please email if interested.

I truly miss not being able to operate like I did when I was first licensed. The enthusiam has not waned, but the QTH has. Since moving to Virginia, I have only been able to operate during FD. I love it, but it isn't ragchewing, and that is a great part of the hobby for me. I miss the all nighters working into Asia and Europe. I miss sharing historical events with people from other walks of life. I hope to be able to someday move into a QTH that I can at least string a wire up.

Yup, that's why I stay the hell off of 80 meters, built an antenna
that won't load on 80 meters and, eventually, stopped using everything
except CW. My guess is that with CW, you can't really just blurt out
whatever is on your mind at the time and, from what I've heard, in
most cases that's a good thing. If you're looking for a decent chat,
try 40 meters around 7.035 and above.

When I got my HF rig, 80 meters was the first thing I checked too.
First thing I heard were two people doing the "net sex" thing on 80
meter CW. How pathetic is that? Within an HOUR, I had written off that
toilet of a band permanently. A second problem is that with the
sunspot cycle on the rise again, you're gonna have a hard time finding
locals on the upper band and a hard time hearing them on the lower
bands. I guess this is what happens when you dumb down the license
testing. Really, the FCC should give you a dead radio and say "Fix it
and you pass.".

Bottom line, there still are people around that give a damn. Just
don't look on 80.

On Mon, 05 Oct 1998 21:02:12 -0700, andy
<acorbin@roanoke.infi.net> was lurking in
rec.radio.amateur.boatanchors, and composed the following about
"Re: Tech America":

> I personally like their stance in this regard and I myself subscribe to
> it. I have refused several sales of amateur transmitting equipment
> because the person could not produce an amateur license.
>
> Andy
> WD4KDN

OK, but what about this-

I have people working for me, as buyers. A person comes in, and
want to buy a particular used transmitter. My clerk, Mr. Smith,
says he can find one in rec.radio.swap. Mr. Smith doesn't have a
ham license. Why shouldn't he be sold this theoretical
transmitter to be resold to a licensed operator?

From: munsch@ibm.net
Message-ID: <361ae217.0@news1.ibm.net>
Source record: 97382

Jeff:
The 6EA8 is usually more reliable than most 6U8s, (less leaky and longer lived) and I have never found a circuit where they didn't work.
All the dealers (Mouser, Allied, etc.) have the connector, and it may be called a PL68 or a PJ068 in the surplus market.

From: Haggis <hamishg@cadvision.com>
Message-ID: <361b02cd.0@news.cadvision.com>
Source record: 97385

Dachis says they were made 1961 - 1964. Originally sold for $69.95 The only reason one might want one is "for the sake of completeness" in a Hallicrafters collection (along with it's successor, the S-120A) They even sell cheap on ebay! (doesn't that tell you something <g>) You're right, they are pretty. Hamish.

Well, We all can stand around complaining about how bad things are.

But, Yesterday I was on 10 meters working the JA's, ZL's and other stations out in the Pacific and remember just how good it was!

I was talking to a newly license VK he was telling me he had trouble with interferance to some telephone/consumer product, the version of the FCC had been out and now he had everything cleared up. He just couldn't believe we were able to set in the home and talk to someone in the USA!

This man was 70 years young.

Yes, we have the Internet, cheep telephone service, and many other ways to communicate but it is still a thrill to me after 30 plus years to talk to someone overseas on HF or to talk to someone across the country on VHF, this hobby is what anyone wants to make it.

I plan on making it my life!

WHY NOT?

If we had another Country to hate we would spend less time poking, jabbing, asulting, denigrading and initiating Flame Fest Contests on the internet especially on the Rec Radio Nets.

China might be a good start since their Military officially announced that the USA was an enemy of Comunist China.

I suggest those of you who fall into this category just simply, " GET OVER IT".

592. Info Req. please on Hallicrafter SX24

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-07 00:00:00 UTC
From: Dave@daves-place.demon.co.uk
Message-ID: <361bedca.16237696@news.demon.co.uk>
Source record: 97210

Hi,
I know nothing about radios,but I found a Hallicrafter SX24 in a second-hand shop.It looked great and it worked,so I bought it.
I would be most grateful to know the answers to a few questions about this radio,and I apologise in advance if some of them seem stupid or obvious,I'm just interested in learning a bit about it's history :-)

Here goes....!
1 How old is it?

2 Is it just a reciever,or can it transmit also, as it has a send/recieve switch? (Hmm... I think I can see this one coming..)

3 Can I use any small speaker plugged into the 'phones' socket or will it get upset?

4 What do all the abbreviations stand for? ie. A.N.L., B.F.O.,A.V.C. etc.

5 What are the connections on the back used for?

6 Is there an optimal length for the aerial?

7 Can spare parts still be found?

8 What exactly would it have been used for originally?

9 Did I pay too much for it? (£30.00)

I look forward to learnig the answers to any of these questions,and thank in advance anyone who can spare a little time to educate me.
Cheers,
Dave.

There sure is, but you have to go to their lair - it's an email list devoted to mechanical TTY gear called "Green Keys" - it resides at qth.net. It's been awhile, but I believe it's a Majordomo site; try:

email to majordomo@qth.net
subscribe greenkeys

and that should hopefully do it.

All I can do is pass on the information that I have read, however, as the person to whom my comment was replied in regard to mentioned, you can go to the web and search the available information on HAARP and I'm confident that you will find more than enough information to answer your question. You can also search out the cited references on the Russian woodpecker which were cited in this thread by others. Keep in mind that just because we only know about two examples doesn't mean that there are not or have not been more..

If you'd like to discuss the 35 years of biological, chemical, and radiological testing that the U.S. government covertly performed on the civilian population in several American cities throughout the 1950's through the 1970's and denied up until the 1980's, I can give you plenty of relevant and documented information..

With a track record like this, what are we supposed to think?

According to the article "What Are The Russians Up To" "Buzz-Saw Radio Noises Prompt Sci-Fi Theories" in the National Observer of 19FEB77..

(not to be confused with the National Enquirer)

Weather Experiments: Maybe..

"Russian scientists have tried innovative weather-modification techniques in the past, including using rockets and heavy artillery to fire lead-iodide crystals into storm clouds to reduce hail. Thus the question, are the Soviets attempting to change the weather by changing the electrical activity of storm clouds or the ionosphere?

"`The idea of changing the conductivity of the atmosphere as a weather-modification experiment isn't ridiculous,' says Walter Orr Roberts of the Aspen Institute in Colorado. A solar astronomer, Roberts has studied the relationship between the sun's "solar wind" of

charged particles and the earth's weather.

"The electrical charges present in a thunderstorm influence rainfall.
By one theory, radio energy might be used to promote the uniting of
negatively and positively charged water droplets and increase rain.
Too, a few theorists argue that changes in the earth's ionosphere-a
region of charged particles that begins about 30 miles above the
earth-influence the formation of storms. Powerful radio signals can
heat the inoosphere and change its electrical activity to some degree."

Maybe that's because you don't understand the reason for it, Mike.
The driving factor for many HF operators is the DXCC award. Last
nite, on 15 meter CW, I worked 423 stations in Europe in about 3
hours. A few probably called for pileup practice, but most of them
just wanted a contact for a 'new one', another QSL card. I probably
worked 95% of the stations I could hear, but I didn't work everybody.

I wouldn't have had many, if any, meaningful conversations if I had
spent a half hour per contact, instead of 20 seconds. And the end
result is all the same. Nobody called me, they called my QSL card...

They get a new one, I get warmed up for the next CW contest.
We are all happy. Nothing cold about that.....

I've had excellent luck with Ralph Bilal's Isotron ant's. See the Isotron ad's in QST or they have a web site. I have mounted them on a couple of lengths of Radio shack stackable tv mast sections, run the coax feed up the center of the masts and stuck them out the window. I have also gone up on the roof and mounted them on stand-pipes and run the coax down the side of the bldg along/behind the gutter down-spouts and along the horiz cracks in bricks or behind the ivy plants growing up the walls and into my window. All very invisible (I've spray painted the coax to match the wall/pipes/ivy/mortar at times.) Most of this usage was for sending intelligence data, so the ant's really needed to be invisible. I always had good sucess with these ants. The EM field around the coax (use a few torroids around the coax at the ant base) and radiated from the coax (see torroids above) measured quite low with an output of 130 Watts. Low, meaning about 5-10% of the field gene-rated by a cordless phone.

Good luck, be wise and study your butt off and really learn your field. Then life will be a vacation and you can pick your work and workplace.

Gang - I found an old file in the home directory concerning a "QSO" between K4MSG and NA4G on the Boatanchors reflector concerning MGY's distress call. It sure makes interesting reading. Hope you enjoy it.

Jeff KH2PZ

Date: Wed, 8 May 1996 08:18:20 -1000
From: "Paul H. Bock"
Subject: Regarding the Titanic (long)

Boatanchorites & Clickers,

In some e-mail exchanges with Boatanchor Bob, NA4G, the subject came up regarding the actual calls made by Titanic's chief operator, Phillips, and his assistant, Bride, after the ship struck the iceberg. I did some quick research on this and thought that my findings might be of interest to both groups, so here they are.

****

In reviewing my old book "Story of the Wreck of the Titanic," published in late 1912, I found some discussion of the testimony of assistant operator Bride (who survived) but the only mention of calls made refers to the well-known CQD. The book also contains some excerpts from the testimony of Marconi at the hearings regarding the proper use of, and response to, the CQD call. Also shown in the book is a copy of an illustration from a newspaper which lays partial blame for the disaster on "Wireless Anarchy." (NOTE: This book is an excellent period account of the disaster, causes or suspected causes, blame, etc., with many excellent b&w photos and illustrations.)

****

Second, the recently-published "In Marconi's Footsteps: Early Radio" by Peter R. Jensen, VK2AQJ/G4GZT (Kangaroo Press, 1994) contains some interesting material which provides more detail. In Chapter 8, "The Titanic," the following passage is of interest (pp. 74-75):

"In the wireless cabin at around midnight, the operators had not yet changed over. The younger operator, Harold Bride, had just returned to take over the key and his senior, John (Jack) Phillips, was getting ready to turn in when the captain suddenly

appeared in the doorway. In New York a few days later, Bride recalled the captain's words:

'We've struck an iceberg and I'm having an inspection made to tell what it has done to us. You had better get ready to send out a call for assistance but don't send it until I tell you.'"

"The captain then returned to the bridge and the two operators were left to discuss this announcement. About ten minutes later the captain reappeared briefly and said, 'Send out the call for assistance.' When Phillips asked him what sort of call he should send, the captain replied, 'The regular international signal. Just that.' Immediately Phillips turned to the operating key and sent out the general distress call CQD six times followed by the Titanic's call sign MGY and the vessel's approximate position. Then he sent:

'Have struck an iceberg. We are badly damaged. Titanic position 41 degrees 44 minutes north 50 degrees 20 minutes west.'"

"This signal was received by several ships and also by Cape Race."

"A little later the captain returned and asked 'What are you sending?' to which Phillips replied, 'CQD.' Bride suggested, 'Send SOS, it's the new call,' and laughing rather grimly he added, 'It may be your last chance to send it.'"

"When the captain had gone back to the bridge, Phillips started to send out the revised distress call.

'CQD CQD SOS SOS CQD SOS. Come at once we have struck a berg. CDQ OM, position 41 degrees 46 minutes north 50 degrees 14 minutes west, CQD SOS'"

****

Finally, Jensen's book also contains a partial transcript (Appendix 7, pp. 168-170) of the press report from the New York Times for Friday, April 19, 1912, which describes an interview with Bride and his account in his own words of the events. Regarding the switch to SOS, Bride said:

"The humour of the situation appealed to me. I cut in with a little remark that made us all laugh, including the Captain:

'Send S.O.S.,' I said. 'It's the new call, and it may be your last chance to send it.'"

"Phillips with a laugh changed the call to 'S.O.S.'

****

The entire episode as related by Bride is well worth
reading, as it contains some scathing remarks about the
incompetence of some of the operators Bride had to contend with
when he assisted the Carpathia's wireless operator in handling
traffic after his rescue; for example, regarding operators on the
USS Chester:

"They knew American Morse but not Continental Morse
sufficient to be worth while. They taxed our endurance to
the limit. I had to cut them out at last, they were so
insufferably slow....."

and

"The navy operators were a great nuisance. I advise
them all to learn the Contintental Morse and to learn to
speed up in it if they ever expect to be worth their salt.
The Chester's man thought he knew it, but he was as slow as
Christmas coming."

There is also Bride's account of bean-balling a stoker with
a board when the latter tried to take Phillips' life belt while
Phillips was still at the key. His closing remarks are among the
most poignant I have ever read:

"The way the band kept playing was a noble thing. I
heard it first while still working wireless, when there was
a ragtime tune for us, and the last I saw of the band, when
I was floating out on the sea with my life belt on, it was
still on deck playing 'Autumn.' How they did it I cannot
imagine."

"This and the way Phillips kept sending after the
Captain told him his life was his own, and to look out for
himself, are the two things that stand out in my mind over
all the rest."

****

This must have been the first call sent. It is the one I have seen
most often quoted or paraphrased.

> ..... started to send out the revised distress call.
>
> 'CQD CQD SOS SOS CQD SOS. Come at once we have struck a
> berg. CDQ OM, position 41 degrees 46 minutes north 50
> degrees 14 minutes west, CQD SOS'"

This must have been the second call sent. I have a xerox of the
operators message pad from the Russian steamer ``Birma'' that has
this almost exact message handwritten upon it. I will make a mental note
to pull it out and type it in in a following email. The format is
slightly different, and the CQD OM is missing, and shorthand notations
were used (were they sent in shorthand or longhand?).

> **********
>

There were three different sets of ``Morse code'' in common use then,
in the English speaking countries, not counting the Japanese, Cyrillic,
and other odd dialects.

1. American Morse

2. Continental Morse

3. U.S. Naval Morse

They can be found in one of the older issues of the Society of Wireless Pioneers newspapers. I will make a mental note to pull that one to and type it in for the record. There are enough minor differences to have made for some interesting crosscoding of characters. It seems that by the time WWI rolled around, everyone had settled into Continental Morse, at sea, excepting the dialects for Japanese Morse, Cyrillic Morse, and one or two others. Probably this was a result of the Titanic affair.

> 73,
> Paul, K4MSG ZUT!

Great info Paul.... Makes boatanchorin' fun, and historical.

73/ZUT DE NA4G/Bob UP

Date: Thu, 9 May 1996 05:00:21 -1000
From: rdkeys@...
Subject: More early radio message trivia --- Titanic

Boatanchorites....

I finally found that xerox of the radio operator's message pad from the Titanic incident......

This is the text of the message sent from the RMS Titanic/MGY as received by the Russian steamer ``Birma'' 100 miles west of the Titanic's position, in another time zone. It was received at 2350 UTC which would have been 0050 UTC Titanic's time, or 5 minutes after the the Titanic struck the iceberg, assuming the times give in the book are correct. This must have been the first message sent.

I have asciified it from the original photo, but it is as correct as I can make it even to placement of text on the pad and things like periods, etc......

No. Words. Origin. Station. Time handed in Via Remarks

CQ | Titanic | 11.50 April 14th-15 | Distress Call
| | | |
| | | | Sigs Loud
| | | |

Cqd - Sos from M.G.Y

We have struck iceberg sinking

fast come to our assistance

Position Lat 41.46 n. Lon. 50.14 w.

MGY

L L. Connor

F G Ward.

Note: I am not absolutely sure of the spelling of Connor's name, since it was handwritten, apparently in a hurry, and no mention of the operator's name appears in the text of the book from whence the above message phtograph came. If anyone has the full reference citation for that book on ships, I would love to find it out. It was countersigned by F.G. Ward. (Chops?).

Then, later in the morning, ``Phillips tapped a signal to the Cunarder Carpathia: `CQD CQD SOS SOS CQD SOS. Come at once. We have struck a berg. Position 41.46 N., 50.14 W. CQD SOS.''' This must have been the second message.

This information was contained in a large picture book on ships. I don't have the title, unfortunately, only xeroxes of pages 125 and 128. The photograph of the message pad is on page 125.

Another book, ``QTC (I Have a Message for You)(A Seagoing Radio Officer's Scrapbook)'', by Ray Redwood ``Sparks'' (Sequoia Press, 1989, 376pp), lists different times --- 2340 iceberg collision, 0015 first SOS, 0220 Titanic sinks. Redwood lists the first message as being sent at 0001, by Phillips, according to Bride's testimony to the New York Times (someone should look that interview up),

``CQD CQD CQD/SOS SOS SOS DE MGY MGY MGY HAVE STRUCK ICEBERG WE ARE BADLY DAMAGED TITANIC 41.46 N 50.14 W MASTER.''

At 0005, Cottam, sparks aboard the Carpathia, receives,

``QSL? MY CQD/SOS, OM? COME QUICKLY WE HAVE STRUCK A BERG.''

At 0125, Titanic to Olympic,

``ARE YOU STEERING SOUTH TO MEET US?
WE ARE PUTTING THE WOMEN OFF IN BOATS.''

At 0130, Titanic to SS Frankfurt,

``STAND BY KEEP QUIET.''

At 0147, Titanic to Carpathia,

``COME AS QUICKLY AS POSSIBLE, OLD MAN. ENGINE ROOM FILLING TO BOILERS.''

At 0155, Olympic to Titanic,

``LIGHTING UP ALL POSSIBLE BOILERS AS FAST AS WE CAN''.

At 0200, Titanic to Carpathia (last message),

``COME QUICK ENGINE ROOMS FLOODED TO BOILERS''.

How accurate the above messages are, with the exception of the photograph, is mostly based upon testimony after the fact, according to the various sources that I have read.

I would love to hear from anyone with closer ties to the actual messages, as sent. I sometimes use these messages in demo presentations, and I want to try to keep them as historicaly accurate as possible.

I have searched high and low for many moons for exact text, and the only thing that I have ever found is the as-received message from the Birma's spark's message pad, from that photograph.

73/ZUT DE NA4G/Bob UP

Date: Thu, 9 May 1996 05:32:03 -1000
From: "Paul H. Bock"
Subject: RE: More early radio message trivia

Bride's interview as published in the New York Times is included in its entirety as one of the appendices to "In Search of Marconi - Early Radio" (Jensen, 1994). I posted only excerpts yesterday, but it's all worth reading. The way Bride's account reads, Phillips did all the operating from Titanic, Bride was merely an onlooker. After his rescue by Carpathia, Bride worked with Carpathia's radio operator, Cottham (sp?), who ended up in near collapse after only 8 hours sleep in three or four days, to help clear all the message traffic (both outgoing and incoming) regarding the disaster; this was the period when Bride described the Navy operators (and some others) as incompetent encumberances. At the time of the interview, Bride was mildly distressed that there were still 100 to 200 more messages to be worked and he felt his task was not yet finished.

So it would seem that although Bride was preparing to relieve Phillips when the accident occurred, Phillips stayed at the key throughout (and Bride's closing comment about Phillips continuing to send after the Captain told him he was free to leave the ship bears this out).

Hello, I have the following tubes available for immediate sale, I need
to make room here for more NOS stock. ALL the tubes listed here are
TOTALLY inspected and tested good, WELL ABOVE MINIMUM on one of my Hickok TV-7
D/U tube testers, all very accurate mutual conductance units. All
are cleaned, and where possible, reboxed with a label on top. If I don't
have a particular size box, tubes will be safely wrapped. I try to
provide the best packed shipments as possible. All are guaranteed to be
as described apon arrival, or you may return for refund,
less shipping costs. Due to the extreme low prices offered here for these,
a mere 5.00 minimum order is required, plus only 3.00 shipping and
handling for shipments in continental USA,(no matter what size order)
others by rate..Sorry, no picking brands or construction
at these prices,(one dollar extra per tube for special requests) but
these are all top brands, like RCA, G.E., Hytron, Westinghouse,
Tung-sol, Sylvania, KEN-RAD, National Union, and others. The quantities
vary for these, but they run 5 to 1000 pcs. each. These are just examples,
I have LOADS of other types at a similar savings, but may be a bit more
if I have to go digging for it. So, if you don't see what you need here,
just inquire, as I probably have it. Respond for further info.
These won't last long, stock up and save...
Thanks, read on....

I have the following items for sale fron an estate I'm handling.

Heathkit HW-5400 w/matching power supply, cw filter, manual appears to be in good working condition.......$300.00

Heathkit HW-16 with HG-10 vfo, manual for HW-16, but not vfo. Appears to be in good working order, HW-16 seems to put between 45 and 60 watts. I would prfer not to split them up. $85.00

Heathkit uMatic SA-5010 keyer, is in good working order and appearance, but is missing the paddles. has manual also......$25.00

Radio Shack Frequency counter..... New in box, manual....$50.00
Radio Shack DX-160 w/maching speaker, good working condition..$50.00

Icom 2at with drop in charger, battery pack, manual, leather case, good condition.....$100.00

Shipping is extra, I can be reached here or at (520)790-8361 MST

Give Drake a call or get to them thru their web site. I got all of the
parts I needed to get my TR-7 up to spec.

P.S. I still get comments that it has the best audio that they have ever
heard (unless I'm using my old Marine Corps Collins PRC-47 on SSB which
does have the best audio ever transmitted.) from every one I talk to on
the TR-7 and I think it has the best receiver of any commercial set I've
ever seen. It is a worthy restoration!!!!

I think you guess wrong. The problem we're seeing on 75m is being created mostly by people who have been licensed a long time, so complaints about the "dumbed down" nature of current licensing testing is moot in that regard. (Testing is designed to demonstrate that you know enough to adhere to good engineering practices in the operation of a station, but doesn't address whether you are an amoral psychopath or not.) What you are seeing is the predictable result of *lack of enforcement* by the FCC. Licensing testing isn't designed to select for good social behavior, but fear of prompt and sure enforcement action does affect behavior.

The same thing happened to CB years ago. Until prompt and sure enforcement ceased, it was a relatively orderly and polite service despite having no testing requirement at all. But when effective enforcement ceased, it became a chaotic sewer (in some cases, not all of CB is a sewer even today of course).

Today's licensing testing, and yesterday's licensing testing for that matter, is certainly "dumbed down" of course. There is nothing dumber than emulating a modem. But that's a separate issue from good social graces on the air. There is no positive correlation between ability to pass tests and good social behavior. (If there is a correlation at all, it is in the reverse direction, since Extras receive a disproportionate share of NALs, and always have. There is no reason to believe that amoral psychopaths are either stupid or ignorant, and as demonstrated nightly on 75m, there is good reason to believe that they are highly persistent and dedicated.)

Gary,
Yeah, good point. I failed to see that one through. Unfortunately, enforcement isn't coming any time soon from what I've read, so an amateur who gives a damn about the hobby (as I do, emphatically, by the way) is left wondering what to do. Personally, I see no reason to actively become part of the described sewage, so there are certain things I do and don't do which keep things here sane and enjoyable.

1.) Screw voice modes. Don't waste my time.

2.) Screw 80 meters. Same as above.

3.) CQ as a last resort only. I rarely call CQ and prefer to listen. There's plenty of other people calling CQ and if you can hear them, they can hear you and they're not being jammed.

4.) Avoid nets, on-the-air "clubs" and the like which are long on rules (i.e. Control), short on benefits.

5.) Ignore losers. All the 80 meter AM in the world isn't worth a thing when no one is around to listen and if you fight back, you're obviously listening. There's plenty of bandwidth and millions of competent amateurs, don't waste time on losers.

Having been licensed a shade over two months, my ability to whip up the above list is pretty sad, in my opinion.

Mark

Hi!

I have for sale a Yaesu:

FR-101 digital receiver
FL-101 matching transmitter
SP-101PB speaker with patch
Astatic 10-DA mic with stand
Interconecting cables

All the above is in perfect working condition and looks
great with NO dings or scratchs. I am the original owner and have
the original manuals & shipping boxes & invoices.
Rig was purchased from Henery Radio
in Butler, Missouri in December of 1977.

Asking price is $450.00 plus shipping from 54601
E-Mail me if interested

Thanks for reading
Bill S.

Please explain this. What indication(s) are there that Russian
Tesla-inspired experimentation, H.A.A.R.P. , or other projects have had any
effect on weather. Hard to imagine even many tera-watts of RF could do this
on more than an extremely local scale.

Exactly! As new (6 months, not counting 20 years as a SWL and wannabe ham) as I am to this hobby, I can tell you that it is much more fun to grab that rare DX at the bottom of the solar cycle on 6 meters. That is a challenge. There are a lot of us out here, even pimply faced newbies barely out of school (mea culpa), who retain the old ham values. Less is more. Skill counts far more than technology. Courtesy and honor are fundamental. "Problems" and gear failures and fixing them are the grist for the mill of "improving the radio art." I'll take my old Drake and channellized FM 2M mobile and some patience and ingenuity over a 160M-70cm all-mode, PC control, LL amp, and beams on a 1/2 wave tower. Contests and $4000 radios are for Type-A Jones-keeper-uppers with little joy in the hobby. Imagine, you can still get on the air DX and then some for 300 bucks and some brains and sweat!!! Amazing! Sssssh! Don't let KenYaeCom and Bill G. hear it!!!

Follow a few simple rules and the "risk" of a libel action is nil:

a) Allow yourself to cool off before firing off a angry message.

b) Try to contact the other party and resolve the dispute, and try in earnest, several times. Privately.

c) Stick to the facts, just the facts. That is, if the scamming ham offered and agreed to sell
you a fully functional, complete, and cosmetically very good radio for $xxx.xx, and he or
she did not fulfill the agreement, state this as neutrally and succinctly as possible. Be
detailed and explain time frame, all terms, and what your part oin the deal was, and
whether you fulfilled your part to the letter.

d) Contact the Postal Service and/or Disytrict Attorney in the other parties area. Often
a stubborn person will be persuaded to perform his or her end of a contract by a little
official pressure (i.e., intimidation)

And let's be realistic; while wronged parties in a private internet swap or sale have little recourse, a libel action, not to mention a *successful* libel action, based on a nasty and defamatory post to a USENET group or other internet bulletin board, however mean and untruthful, is very unlikely. In fact, such a case would be a precedent. Besides problems of jurisdiction, standards of proof are incredibly high. Even in conventional print, libel is one of the most difficult suits to even get heard, much less win.

A person is not legally obligated to "prove" a statement like this. If I say that Fred Derf promised to send me a clean functional FT-920 for $800.00 bucks and instead sent me a battered broken one, or a FT-101, or nothing at all, it is up to Mr. Derf to prove that he in fact did send me the nice 920, as agreed, in a timely fashion. Derf still has to prove malice to prove libel. As a matter of record, libel actions against private parties (i.e. not newspapers, TV stations, etal) have a success rate of about 1/4 of 1%. I am not just making that figure up. The American Bar Association publishes annual statistics of torts (civil suits) state-by-state. If I received notice of a suit for libel against me, especially based on the ephemeral internet, I wouldn't even bother to hire an attorney. In addition to the other issues, proof of authorship, apart from falsehood and malice, is an almost perfect bar against action.

CBRambo wrote:

Perhaps we should take some heart from the recent reorganization
of the FCC's method of handling enforcement. It appears that the
FCC is at last at least acknowledging that they haven't been doing
their job in regard to enforcement. Whether this change results in
real action, or is just rearranging the deck chairs on the Titanic,
remains to be seen of course.

>Personally, I see no reason to
>actively become part of the described sewage, so there are certain

>
>1.) Screw voice modes. Don't waste my time.

Well, I think that's rash. If good people abandon a mode, then all that
will be left is trash. HF voice isn't a total loss yet, but if others think
like you, it might become a total loss. I've just spent a very enjoyable
hour on HF voice chatting with one of the participants in this newsgroup.
We weren't jammed or cursed. So it is still possible to enjoy HF voice
operation.

>2.) Screw 80 meters. Same as above.

Same response.

>3.) CQ as a last resort only. I rarely call CQ and prefer to listen.
>There's plenty of other people calling CQ and if you can hear them,
>they can hear you and they're not being jammed.

Well, I'm not a big CQer myself, but I'll do it if necessary to scare
up a contact.

>4.) Avoid nets, on-the-air "clubs" and the like which are long on
>rules (i.e. Control), short on benefits.

Nets can be fun, but most are boring, and some are downright
obnoxious. Like everything else, they are what you make them.

>5.) Ignore losers.

That's not a bad approach, if you know for sure who is the loser. You may find that you're the loser, however, if you avoid people and activities that may turn out to be interesting or fun. Learning when to turn the dial, and when to exercise the on-off switch is a critical part of good operating. It doesn't pay to wrestle with a pig. You just get muddy, and the pig likes it. But it is a mistake to just automatically assume everyone else is a pig.

No... They have a 2 meter version and a 70 cm version. They are not a
dual bander.

In California it's standard policy to require a drivers license.... You can't even go on a test drive. At one time you had to be over 21 years old to buy a car. I think that has been reduced to 18 years old.

By the way you also need proof of insurance to buy...hi hi

Not sure when it began and ended, but I think I got mine for Christmas in 1963. A pretty bad receiver, but not too bad as an AM table radio (as you said). Unfortunately I was using mine as a ham receiver.

They don't seem to be too rare--I've seen several on ebay (Oooh! I said the E word!) recently. Also I traded a guy a Gonset Communicator II for one via this newsgroup some time back. If I ever thought I'd been exaggerating how bad some of those old receivers had been, turning the S-120 on erased all doubts. I haven't tried to do any work on it--still trying to find a schematic.

The funniest think I remember--I loaned my S-120 to a buddy just starting out. When he keyed his DX-40 into a longwire, the S-120 started smoking. Seems that strong rf field was being absorbed by the loopstick antenna in the S-120 and overheated it!

Regards,

Nick, WA5BDU

Gary,
Well, these are my rules of thumb and they mose certainly are not for everyone. I figure I've probably had a worse time than most concerning voice modes, 75/80 meters and nets, but my personal experience is what I have to work with and this is what that experience has brought about. What ticked me off is that this subject came up in the first place, as if broadcasters sitting in the middle of the 40 meter band, CBers taking over the 10 meter band and who knows what suddenly showing up using sideband on 14.030 isn't bad enough, now we have to avoid those that are supposed to be on the SAME SIDE for the same reasons. Worse, actually, since broadcasters don't make it a point to single people out with dead carriers and foul language.

I don't believe "more enforcement" from the FCC will really be effective in and of itself. For example, I read where the FCC shut down a pirate FM station. I guess this is supposed to be a good thing except that the article went on about how this happened after attempts by the FCC to have the operator voluntarily shut down failed. What are they thinking? This is a pirate radio station and the FCC thinks that by saying "please" the operation is going to take pity and close up shop? "Repeated attempts"? Then came the bit about the fines and possible jail time which were, in my opinion, laughable. If anything, the article was more about how easy it is to get away with that kind of thing and how little the FCC can do to you IF you're caught. And this on a commercial band where the almighty dollar rules. I don't believe the FCC doesn't care about the amateur service and I do believe they would like some kind of rational enforcement, but if the worst you can expect is a slap on the wrist when operating a completely illegal station on a commercial band, it's pretty obvious that there's nothing of value coming from the FCC for the amateur bands. Now if the FCC started handing out sizable fines, jail time and revoked licenses permanently, based on evidence of wrongdoing, something may actually happen. Of course, the key phrase there is "evidence of wrongdoing", especially in the case of amateur monitors catching people breaking federal law, which is not to be confused with the monitor's "Law Du Jour".

Finally, this whole conversation is even more interesting when you consider there's some "Save Ham Radio" thing going on. Save ham radio from itself?

635. Newbie help: Audio output transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-07 00:00:00 UTC
From: David Bowden <david@bowden.net>
Message-ID: <361B9F9A.1408@bowden.net>
Source record: 97276

Hi all,

I'm an EE with some luddite tendancies, and I'm trying to get some old tube amps rebuilt. It started when I found an old Bogen DB10 in a trash heap. I brought it home, replaced a missing tube, plugged it in and it worked (badly). I had some fleeting thoughts about getting another so I could have a stereo pair, but it ended up collecting dust on a shelf for about two years.

Recently I found another one on Ebay (though I hate to mention that name in this group!), and now I'm trying to get them sounding moderately good so I can use them. I'm not looking for audiophile quality, and don't think I could get it out of these amps. I mostly like them because they look cool.

The problem is... the amp I just bought has an open on one side of the audio output transformer. After checking, it turns out that the amp I found in the trash has had its audio output transformer replaced (not original, only 8 ohm output).

I don't really want to spend gobs of money on these things - I figured I could replace the caps, clean them up, and have a cool-looking set of boatanchors.

I pulled the open transformer out, and am having thoughts about some surgery to see if I can find the open. Is it worth the trouble?

Should I try and get the open transformer rewound?

Should I just buy a new transformer (10 watts, 10000 Ohms in, 4,8,16 ohms out)?

AND - what about the fact that the transformer in the other amp is not original. Will mismatched transformers screw up any hope of using two amps for stereo sound? Should I buy TWO transformers?

OR - should I clean them up, put them on the shelf, and spend my money on another amp?

Thanks for any help.

I'm parting out the TS-830S station I previously posted:

Terms: Cash, Certified Funds (IE: Postal money order, Cashiers check)

All items are in excellent cosmetic and operating condition. First
reply confirming sale will get the item.

Kenwood TS-830S, new driver and finals, full output, 500Hz filters in
both IF's and stock 2.4 SSB filter. Optional KB-1 tuning knob, just
back from International Radio with "optimized alignment". This is a
great rig ! A VERY hot receiver and great audio. $550 shipped

Kenwood AT-230, antenna tuner/meter $150 shipped

Kenwood SP-230, filtered speaker $75 shipped

Kenwood SM-220/BS-8, station monitor and cables $285 shipped

Kenwood MC-50, microphone $50 shipped

Autek QF1-A, audio filter/notch $50 shipped

NOS matched pair 6146B finals, $40 shipped
NOS 12BY7A driver, $7 shipped
Used, Good pair 6146B finals, $20 shipped

All equipment with either original or excellent copy of operators
manual, some with service manual.

Hi Jack,

Just bought over the internet a Viking II that came with a SB-10. Owner claimed it worked fine. It came with a couple of cables. One was a octal to octal for power to the SB-10 and the other a mike adaptor cable for the SB-10. By the way do you know the going price of a used SB-10 as I probably won't use it with the Viking II?

Cite please. I have never been asked for either a license or proof of insurance in any of the three states in which I bought a car. You need proof of insurance to REGISTER a car and to get a loan on a car, but not to buy. Why would I need insurance to buy a car to convert to a race car? It's happened. A friend bought a brand new "body-in-white" several years ago. He got a bill-of-sale because it had a VIN, but he didn't need a license or insurance. How about a corporation? I could go on, but read my first sentence again.

Thanks once again to all who responded, there was a bit of confusion early in this thread as to the proper tube compliment for this rig... Scott, the gentleman in need, has found a manual, and hopefully the proper tube list...you see, his grandpa took out most of the tubes, so he didn't know where to start.. He is quite impressed with the level of support he has been provided with in this matter, and is looking forward to picking up where his grandpa left off. A job well done folks, you not only helped Scott, but did the hobby a great turn also..Keep up the good work, and thanks for setting "Ham radio newbie" Joe here at Tubecntral straight!

You can do anything you want.... I am sure you will find a dealer who
would sell you a car with no license.... It doesn't make it legal....
If you or any company sells a car to a person without a license....
guess who is libel if he goes out and hurts somebody? Anybody who would
sell a car to an unlicensed person is plain "S T U P I D"... This
applies if you sell a car to a minor also. But don't take my word.....
call the California DMV. As far as insurance goes...How is a car dealer
going to register your car without insurance.... and they must register
the car....

Several months ago, I completely rebuilt an AR-3 and DX-60 that I obtained via the Internet. I had expected to put them on the air someday, but it's becoming obvious that that's too far down the priority list to be likely to happen. So... I've decided to offer them, and their accessories - the HG-10 and QF-1, for sale.

DX-60:

Mint condition front panel and cabinet, original knobs, and expertly rebuilt. The original harness had to be tossed, so I made an exact replacement -same wire colors and gauges, hand-laced with waxed lacing cord (military style), and it fit perfectly. Before beginning reassembly, I polished up the chassis with SOS, and used paste wax to protect it - it looks great. I also used new parts - disc caps, electrolytics, resistors, etc, wherever possible. You'll be really proud of this one.

AR-3:

The copper-plated chassis was in very nice condition as I received it, but I polished it up with SOS too - it looks like new. I also recapped this one with fresh cans from Antique Electronic Supply, and cleaned up all original parts before rebuilding. I replaced all the sockets with new ones (AES had the phenolic miniature type), and replaced most of the disc caps. I even found an unused power transformer for an AR-2, so replaced it too. The case is in better condition than any I've seen at hamfests. I went through a complete alignment with lab instruments. The only problem is that at high volume with the BFO on, the radio sometimes motorboats - I didn't find an easy cure for this.

QF-1:

I bought this from the same guy that had the AR-3, and there was no reason to rebuild it. It's a 10 inside and out - not even a scratch, and it works perfectly.

HG-10:

I found this at a hamfest. It was expertly built, and the builder must have sprayed the sheet metal parts with Krylon before building, because the metal is just like it came out of the box new. VERY NICE wiring job. The only problem with this unit is that the dial drum is cracked in a few places - still holding together though. BUT, a friend sent me a NEW dial drum, in perfect shape, which I will include. And, the knobs are not original, but are very nice (Kurz-Kasch?) black ones with metal inserts.

This complete station; looks good and works good, and I prefer to sell it as a package. I can even furnish a number of spare tubes. To make it even more

complete, I'll throw in a Spi-Ro AS-2 all band antenna (160-10M) - new & unused, and an AEA AT-300 antenna tuner that I won't be needing. Original manuals for all Heathkits included. Total price: $375 plus shipping. ($275 without antenna & tuner.) Not a bad price for a Time Machine!

A retired engineer friend who is helping me service my dead TR-7 sent the following message about a parts need ... can anyone help, please?
73, DavidC AA1FA

"Up Convertor is not functioning. I don't know if there are reasons other than the device that would prevent it from outputting. Has the 40MC input and a signal from the antennae but nothing on the output. The one which you sent - in the bag of other parts - has been removed from equipment but I put it in the board anyway. It behaves the same way. Think those are diode ring modulators but are not made to service. I don't have a replacement. And no house around here where they might be obtained. If that is all that it takes to fix the radio, it will be great. But we won't know until that stage is working as both receive and transmit are passed through it."

YAH ! !
$10 tops.
The only ones on the Green country hamfest were $75 each and the useful parts
seem to include being able to make an antenna tuner from them, that does good
stuff.

I haven't made a tuner in a long time, but the price cop is guilty of

Well, that is one more thing I wouldn't buy at RS anymore. Their prices are considerably higher than even AES and RF Parts (e.g. 45 bucks for one 6JB6; they are 23 at AES). The limetime warranty might have justified that price, but no more.

I returned a "life-time" guaranteed tube (I think it was a 50L6GT) to
R.S. several years ago. It took them six months to get a replacement.
And the replacement tube was guaranteed for 90 days, and did not have
the gold plated pins.

So the guarantee works only one time. When they say "lifetime", they
must be talking about the tube itself.

Another thing to watch out for: The different base between the "B" and the others along with some other minor changes causes the "B" to exhibit different stray reactances, and it is unstable in some circuits, especially at VHF. Further, some of the equipment designed for the "B" goes unstable with other 6146/A/ other numbers. Also, some manufacturers of the "W" versions used different internal geometries (at least in the 60s) which were really weird acting in anything but DC voltage regulators. Good luck, but watch out for unexpected crazy effects.

They had another ad for the Alinco 2m or 440 ht (with speaker/mike) for $79 today in Phoenix. The ad was a 1/4 page and featured a picture of the unit. (Among about 6 other items) To their credit the fine print said FCC amateur radio license required. Because of their low power I suspect non ham buyers won't be a big threat to local repeaters. Probably the main non ham use would be for hinting and car to car caravan ect. communications. At that price the business band ht's won't even compete. They must have been a big dump on the market. I see a guy has 10 of em for sale on ebay....same price. Maybe a Tech American in ham disguise???

Jim,
I'm one of those you didn't work. <g>
Nice pile-up though. I'll keep my ears open for the next time around.

Mark

You sure can,... the "A" is a 20 watt mobile-rated tube.. The "W" is also known as a 7212, it is a ruggedized industrial/military version of the 6146. The 8298 is even better, this is the same as a 6146B, which are conservatively rated at 27 watts apiece... Hope this helps... 73,
Joe Pratt

I have one too. My dad bought it way back when to use for SWL listening. You're right, nothing to write home about but it sure is good looking. I think mine still works but I haven't fired it up in a while.

I doubt that anyone ever actually drove the Woodpecker from a frequency. The system used sophisticated signal processing, as evidenced by the phase shift keying (PSK) embedded within each pulse (see the article in Radcomm referred to earlier in this thread). So a simple on-off-keyed signal, even using synchronized Morse dots, would have little effect, especially since a Morse signal is very narrow band compared to the Woodpecker. If the Woodpecker left the frequency, it was almost certainly because they had planned to leave anyway. Remember how it used to step around the band, often staying on one frequency for only a few seconds while staying on another for many minutes at a time?

So, are you saying that a 6146W can not replace a 6146B? I would like to use a "W" version since they cost less than a "B" if it would work.

Watch out for the 6146B. The filament drain is not the same as the A version
and in series-parallel filament connections can cause problems.

Ummm....

Can someone tell me what registering cars has to do with talking about old radios??

As far as Tech America goes, if you want a radio bad enough you can get it anywhere. I went to a hamfest last weekend and picked up a nice clean 2m HT. I don't have a license (yet) and the ham selling the radio sure didn't ask. I told him I was taking the test in a couple of weeks and wanted a good starter rig, but I still don't have a license....

Didn't bother him to take my money, license or no. I may be biased, but I don't think we need to check for licenses in order to purchase Ham Radio equipment from dealers or private individuals. I don't intend to start transmitting without a license, I'm working for that ticket and I want to show it off when I get it. However a couple of weeks of listening to the local nets before I jump on is great experience for any new ham.

BTW, I'm studying to pass my code test at the same time..... along with my 14 yo son!!

Thanks....

Jim Donahue

Hmmmm..... Why would you need an HT if you have no license? I
sometimes check new hams who show up on the repeater on the callsign
database. Quite often it's a bootleg call....

> anywhere. I went to a hamfest last weekend and picked up a nice clean 2m HT. I
> don't have a license (yet) and the ham selling the radio sure didn't ask. I

My advice to you is.... learn the code and pass the test before you
even turn on a radio.....Many "No Coders" get stuck on UHF & VHF and
never get around to learning the code. The Elmer who helped me with my
novice license told me "Don't touch a 2 meter radio until you have your
General license"... That was good advice.

Good Luck,
Don, W6IQ

Anecdotal reports say RatShack is still honoring their warranty,
but since I had hoarded up about a million tubes starting in the 1960s,
I never had to buy a tube from anywhere (except for "unobtainium" tubes
found in certain Heath VFOs).

As for your experience with the zitmeister clerk -- it'll probably be
the same as when I recently went into an auto parts store to get
points for my Alfa Romeo. The clerk looked at the points, blinked
twice, and said "What are THOSE??!?!" Seems he'd never seen a set of
points before.

Unless you are an audiophile (you know, the kind that runs monster cables to their speakers), or a collector (who has to have everything original), I'd just buy one (or two if you want them matched) new universal output transformers.

I would also advise you to check & see if these amps have negative feedback from the output side of the output transformer, and that you pay attention to polarity.

You should be able to find universal output transformers in a surplus outlet, perhaps even an electronic parts house would have some lying around.

Except for minor interelectrode differences, they are all interchangeable. At
most, reneutralization may required, but not likely.

Better "price police" than rip off artists???

Or maybe, like most other things in life, everything must reach a balance.
There must be an equal number of "price police" to balance the rip off
artists??

Believe it or not, there are a lot of new people who do not have a clue as to
"going rate" for items. The smart ones ask, and unfortunately, usually get
flamed for asking. The timid ones hope that
someone will speak up when an ridiculous price is asked.

Hello,
Well, after many inquiries, and no sale, the 110 is for sale again.
This 110 is very clean, and seems to work well on CW/SSB. There is a hum
in REC and CAL modes. Comes with 110A manual, but the schematic is the
original 110. Asking $65US, and this includes air shipping to the USA. It
is very well packed and ready to go. E-mail to:
dorn@freenet.edmonton.ab.ca if interested.

Thanks,
Chris VE6RDC

Hi David, while you are at it, It appears that they still have top cabinet covers for thr TR7. My TR7 was a 3000 serial number. It had that awful rubberized paint.. So last year I ordered a new top cover used on the later tr7/7a models for about $15.00!!!!!! Makes the rig look great and you can't beat the price!!!!!! I live my TR7 and wouldn't part with it for the world!

> please post or email replys just remove the _nospam.

Travis,

First of all, congratulations on finding a Ranger that has the two most popular and important "mods." As to the zap sound, I'm not sure what would be causing this. As to the mike, an Astatic D-104 with the G stand (G for "grip to talk") that CBers favor is an excellent choice for the Ranger. The "timed sequence grid block keying" was a factory mod that allowed the oscillator to be cut off during key up (or off) on cw. This is particularly important if you are using an electronic T/R switch when using CW. It allows you to hear a breaking station between cw characters instead of the tone generated by a constantly running oscillator. There is a screwdriver adjustment on a shelf to the left of the vfo to adjust the grid block setting.

You will need either an electronic T/R switch or a relay to switch your antenna between the Ranger and the SX-42. Probably the ideal solution, particularly if you are planning on running AM, would be a Dow-Key coaxial relay. This relay has coaxial connectors for the transmitter, receiver and antenna. Most also had external contacts that could be used to silence the receiver when you were transmitting.

Finally, if you do not have a manual for your Ranger, feel free to download one from BAMA. Good luck on your project.

Dave,
I am in the process of refurbishing an SX-24 and had another one 40 years ago as a novice. It was my first "real" receiver and I heard the first Sputnik on it. So, answering your questions to the best of my knowledge . . .

>1 How old is it?

The SX-24 "Skyrider Defiant" (don'cha just love those old Halli' names?!?) was made in 1939, for about 6 months until the SX-25 was introduced. THe SX-24 sold for $69.50 (ref.: "Radios By Hallicrafters," by Chuck Dachis, Schiffer (c) 1996). It first appeared in QST magazine in the July 1939 issue and last appeared in the November 1939 issue. It's claim to fame was "frequency meter tuning" (calibrated bandspread) for the ham bands.
>
>2 Is it just a reciever,or can it transmit also, as it has a
>send/recieve switch? (Hmm... I think I can see this one coming..)

Yeah, you guessed it. The "Send" refers to the "other" bigass box, the transmitter. In "Send" the SX-24 receiver's tubes were cut off to prevent the transmitter from frying the receiver innards.
>
>3 Can I use any small speaker plugged into the 'phones' socket or will
>it get upset?

There are TWO hi-impedance speaker connections on the back panel: 500 and 500 ohms. The earphone jack expects high impedance (5000 ohms) too. I think your basic 4 or 8 ohm speaker would not be happy.
>
>4 What do all the abbreviations stand for? ie. A.N.L., B.F.O.,A.V.C.
>etc.

A.N.L. = Automatic Noise Limiter, which the manual claims will "effectively minimize ignition and simial types of interference."
B.F.O. = Beat Frequency Oscillator. It injects a tone for receiving CW (code) or SSB (Donald Duck-sounding stations).
A.V.C. = Automation Virgin Conquest...no, make that Volume Control. It keeps the volume relatively the same for different strength signals.
>
>5 What are the connections on the back used for?

Left-to right:

A1 = Single Antenna wire. (Connect A2 to G[round])
A2 = 2nd wire for a twin-lead antenna feedline.
G = Ground

S-meter adjustment (S= Signal Strength; the meter on the front.) Consider yourself lucky if the meter even works!

The power recepticle for external DC power, if needed. Pin 3 should be wirder to pin 4, and Pin 6 to 7 if the shorting plug is missing.

The two speaker connections; top = 500 ohms, bottom = 5000 ohms

Ext(ternal) Sw(itch): Contacts for an external switch or relay that controls the RECV/SEND state.

The power cord.

>
>6 Is there an optimal length for the aerial?

Yeah, but fuggedaboudit. For receiving, just put out as much wire in a straight line, as high up as you can.
>
>7 Can spare parts still be found?
Yes, but with some difficulty. Tubes, capacitors, IF cans, etc. are available (e.g., from Antique Electronics in Tempe, Arizona. Structural bits and pieces are typically obtained from a SECOND "parts" radio. (I got some from a junker SX-25.) BTW: The manual for the SX-24 is available from www.w7fg.com.
>
>8 What exactly would it have been used for originally?
It was probably marketted primarily a ham receiver, although it served as a general shortwave listener's radio. (And it covered the regular broadcast band.)

>
>9 Did I pay too much for it? (�30.00)

Nope, ya' done good. $100-$125 is typical according to the Dachis book.

Hope you enjoy it as much as I enjoy mine.

In addition to the MIL manual on this cheap 'scope, it was made by
Waterman for the civilian market as well, so info may be easier to find
in that direction. There isn't a lot to the 'scope, so not a lot to find
out - the circuit is simple and straightforward.

David,

No Luddism there - IMHO, tubes simply sound better (and they're fun to work on!). Just don't do the hermit thing in Montana, OK? ;-)

As far as your Bogens, if you haven't posted on rec.audio.tubes, I would go there. LOTS of very knowledgable folks who would have good suggestions (I'm just a newbie, so I'm of limitted technical assistance). Bogens do have a spotty reputation, from what I can gather, and trannie problems on any vintage gear is a tough nut. I might save them for a 2nd project and try something a bit more common first - Dynaco ST-70's and MkIII's are quite popular; lots of info, lots of units out there relatively cheap, and not too tough to make sound very good. Scott, Fisher, Eico, Heath too - do a power search in RAT to get a flavor of what's out there. Good luck!

Kevin McDonald

Thank you. I was informed that the difference was that these were in GE
Original boxes and the others JAN. ALL 20 TUBES WERE SOLD FOR $300
Thank you to all who pointed out the difference I thought I had a good
deal and I took a loss. 73 Chris

738. Cootie Key ad

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-08 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6vhfkl$33a@news.Hawaii.Edu>
Source record: 97235

From page 59 of the July, 1920, issue of QST:

``COOTIE'' KEY

Cat. No. YM6

The ``Cootie'' key is the snappiest sending device offered on the market for reliable spacing of characters. Listen to 9NV, 9LU, 9MS, 9UG, 9BY, and judge for yourself. Large standards, formica knob, substantial silver contacts suitable for use up to 2KW. The double action of the ``Cootie'' key lends an individuality to your sending.

Nickel Plated $5.00
Plain Brass $4.50

Young & McCombs, L.P. Best Pres., Rock Island, ILL.

"...lends an individuality to your sending." Boy, is *that* an under-statement!

For those who've never seen nor worked one, the Cootie (or "sideswiper") is a key in which you move the paddle left and right, never hitting the same side twice in a row. A dit can occur on either side, as well as a dah. To send "KH2PZ" your hand's motion would be:
LRL RLRL RLRLR LRLR LRLR
-.- .... ..--- .--. --..
You can make one from a hacksaw blade and a few wood screws. Spend some time using a CPO before you get on the air with it!

Jeff KH2PZ

Greetings,

I'm trying to get a Globe LA-1 linear amp going again and need some information...i.e. -- Is there a replacement for the EL38 used as the final tube (actually four of them)?

Thanks...

Regards,

Walt, W2OKF

754. KY-65 Keyer schematic needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-09 00:00:00 UTC
From: jstrohm@texas.net
Message-ID: <6vl6rbdjr1@nnrp1.dejanews.com>
Source record: 97002

Title says it.

I need a schematic or interconnect diagram for a KY-65/ARA-26
keyer. This is an electromechanical keyer that turns a plastic disk
with snap-out teeth, and you snap out the teeth to form your call sign.
It's some Cold War relic and is a very elegant kludge.

I picked one of these up (literally off the tarmac) at the last Swap Fest.
It's in near-new condition, and before I start chopping I was hoping
to get a Clue on what to connect. Yeah, I can trace everything out myself,
but I'd like to save some effort.

My application for this piece will involve some butchery to put it into
daily use. If anybody is interested in this piece before I take the
cutters to it, drop me a note. I'll donate it to a bona fide museum,
and will deal reasonably with a collector. Not like I have a lot of
money it....

email to jstrohm@texas.net, please

Jim N6OTQ

Bob, Can you give a description of the connector? I have a few old ones kicking around, but have no idea what they were off of. Memory seems to lack the luster of years gone by. 73 de VE6INM

A price cop is never incompetent. They just report on the perceived
value in their local market. If somebody has an overpriced thing, they
deserve to have the price cops hooting at them (more on this at the
end of the post).

Don't forget that in a correctly working market, prices rise to the
highest price paid, for any number of reasons. If something won't sell,
its price is too high. If an item is scarce and there are plentiful
buyers, its price is too low if more than one buyer will buy the item
at the asking price. The actual market price falls somewhere in between,
depending on variable such as whether the Dog Star is barking to the
left or to the right.

In this market (Central Texas), $75 for a TU is a JOKE. $10 is actually
high -- the NOS/NIB condition TUs go for $10 to $20, and the ones that
have been in the chicken coop fetch $3 on a good day.

I have to wonder whether the TUs at Green country went home on the same truck
they arrived on.

Jim N6OTQ

Oh yeah, if anybody is interested, I have a 1942 ARRL Handbook
I'll sell for $2,500. Hoot all you want.

I took back a fried 12AX7 earlier this year. I delt with the manager. I didn't get any hassle, although for some weird reason, I still had the original sales slip from 12 years earlier!. Anyway I got a brand new Sovtek 12AX7WB (pretty nice current production tube) in the mail about 10 days later. Bottom line, if you are firm, they will honor the warrantee, but the tube they send may or may not be anything that you want to use.

Paul Reynolds wrote in message ...

>If you want to talk to amateur radio DX operators
>without interference, try Internet Phone software

IMHO: Two different hobbies, Paul. Radio was and for me still is about doing it yourself - same reason I like camping and power failures - to enjoy some level of independence and self-reliance. I can pick up a phone and without much trouble talk to any place on the planet. Hard pressed to find a single DXCC approved country that doesn't have a phone line and a laptop with Internet access. Just isn't any challenge or reward with local or DX via a telephone switch (altho there are some nodes, like in the former soviet states that are *fun* to route voice through, let alone data.)

I suppose that's the reason I don't particularly care to have one of the new breed of computer controlled transceivers. Somehow having a GUI panel show me where the current openings are and tuning my xcvr to them takes the fun out of it. I like to fiddle with the knobs - dip the plate, peak the grid, make a contact with somebody without a string between our tin cans! Got to admit, packet radio is intriguing...hit the Internet from the *real* Ether-net...

Hmm, where's that tin can attachment for the PC??

Correct Gil..
For Me......yes I love what I can do with internet computers etc...but
Nothing beats a "New Country" on 160 meters!!....
You really want a challenge....come to 160 meters and work DX!!..
...consider home built antennas and even good commercial equipment
propagation, noise both man made and atmospheric...and all the other
problems to overcome...currently at 265 countries on 160....and
very seldom miss a day of not looking for the elusive "New One"....

766. FT: HRO-7T for hf xcvr

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-09 00:00:00 UTC
From: ccar@geocities.com
Message-ID: <6vlq39dee1@nnrp1.dejanews.com>
Source record: 97014

I have a VERY nice National HRO-7T, no mods, very good condition, with...

115 vac doghouse ps. 6 vdc doghouse ps. all coil sets available for the HRO-7 plus the VLF coil from a HRO-5 that works great in the HRO-7. matching speaker. manual (photocopy)

These are a set, not collected seperatly and put together. The original owner bought it all together, (except HRO-5 VLF coil). I won't break up the set. I have not tested the 6 vdc ps. Everything else works great. Rig has not been recapped, but is aligned.

I want to trade for a hf transciever, Kenwood, Yaesu, Icom... Must be in very good working/cosmetic condition.

Pictures of the HRO-7T are available via email upon request.

Thanks

Craig wb6rmp

We are less than 30 days away from the Odessa Texas 15th Annual Hamfest!

If you haven't been here, don't miss this year! Lots of prizes, hidden transmitter hunts, lots of door prizes, lots of fun. We fill 21,600sq ft of space with over 200 tables of vendors & hams. Yes, we are not the largest fest around.... But, we like to think it's a fun and great fest. Ask any of the dealers that have been attending for years.
Texas Bugcatcher
The Ham Store (KCOMM)
WB0W
Rad-Com Radio
and many more...

This year is the first year we have had online & secure registration. No, you do not need to attend to be eligible for the major prize drawings on Sunday. And, any unclaimed registrations are put into the hopper prior to the major drawings on Sunday. Hey! Come check out the Sunday Lunch/BBQ!
Prizes include:
Alinco DX-70T
ICOM 2710
ICOM T7A
ICOM T2A
ICOM T2A (yes, two of them)
ALINCO C1T (2 of them)
ALINCO C4T (2 of them)
COMET GP-6
And...possibly a full computer w/monitor...still working on this prize.

Check out our webpage at: http://nonprofit.apex2000.net/hamfest/

Gang!
Caig also has a solution stronger that deoxIT. It's called
ElectricALL.

clipped from web page--------------------------------------
Improves, Cleans, Protects, Lubricates Electrical Connections
Reduces Intermittent Connection Failures
Removes Corrosion and Oxidation
Reduces Arcing & RFI

Similar to DeoxIT, but slightly stronger formula. Packaged for the auto, marine and aviation industries. Cleans, deoxidizes, preserves and improves conductivity on electrical connectors and contacts. Maintains optimum performance of electrical connections. Ideal for all equipment and components as a preventative measure to stop oxide buildup before it becomes a problem.

Ideal for use on: batteries, switches, edge connectors (computer games, etc.), plugs/sockets, tuners, potentiometers, power tools, commutators/brushes, fuses/holders, terminals, relays, model car/train tracks, musical instruments (strings, controls), etc.

ElectricALL SPRAY - 5.5 OZ. (156 G), no CFC's/HCFC's, Part No. E5S-6

ElectricALL E100S SPRAY - Provides short bursts of 100% ElectricALL. No solvents, environmentally-safe and non-flammable. Part No. E100S-2, 2 oz. (57 g) metered valve.

ElectricALL Precision Dispenser - Part No. E100L-25C

ElectricALL 5% LIQUID: no CFC's/HCFC's. Part No. E5L-12 (12 oz./354 ml)

end clip--

Has anyone ever tried this formulation in lieu of DeoxIT? How did it work?

Have the folowing for sale. I posted this last week, and and now have reduced the prices as I need to remove these from storage.

All tubes on this list are reduced an additional 25%. If you need a tube, deduct 25% from what is listed below and that is your new price.

6JE6C/6LQ6 4 ea 2 GE and 2 RCA $40 in AES. Now $30 each or 4 for $110.

8187/4PR65A 2 available Eimac brand--Now $120 ea

2C39 WA Raytheon Planar triodes. Have 15 at $45 (AES wants $77) (remember less 25%) subtract $11.25 ea

2C43/464A 2 ea 1 Litton No box, 1 GE (AES $25) Now $13.

2C51 Sylvania 2 ea crosses to a 5670, a VHF triode $4 ea

2E30 2 ea National and 2 ea CBS $5

2K25 4 ea JAN Raytheon klystron (blue) AES $75 Now $50

3ADP1 1 ea Small CRT Dumont $5 plus S & H

3ADP31 1 ea Small CRT GEn Avionics $5 plus S & H

3B24W/WA 6 ea Cetron $6

3B28 1 ea Cetron $12 half-wave gas rectifier

3B29W 2 ea Cetron, $20

3C23 3 ea Cetron $30 Thyratron

3D21 WB 3 ea Tung-sol, Mulllard $85 at Alltronics Now $24

3E29/829A 3 ea RCA and ITT Now $7

4B31 3 ea Cetron was $70 Now $45 minus discount

4D21/4-125A 1 ea RCA AES $125, Now $75

3CX350A and
4CX350A 7 ea VarianEimac AES $183 ea Now $120. 110mhz 6v fil

4CX150A/7304 1 ea Eimac AES $47 Now $30

7554 General Electric UHF amplifier AES $40 now $20

Dealers will be glad to sell you anything you're dumb enough to buy
from them!!!!
They don't sell GEICO insurance -
They don't sell license tags - the state does - if a dealer won't
give you
temporary tags so you can go buy your own tags, you need to find
another
dealer!!!
Apparently the car dealers in California own enough legislators to
make
their own rules -

Simple.

It first became apparent when I tried to register with www.qslcard.com
which is a NIFTY new Virtual QSL Card system.

I gave them my e-mail address as
af4k@qsl.net which has always worked just fine for me.
They tried to e-mail me my pass word, but it never came through!

Just for a test, I sent a message to the address myself:
af4k@qsl.net

and it bounced back as undeliverable - no such address.

I wish they would let us leeches know when they are going to drop us!

Yes, their web server is back up and running now.

Thanks to everyone who responded, including the smart arses!

Hi Larry,

I am interested in your command set equipment.

What is the cosmetic condition of each?
Have any of them been modified?
Do the receivers and transmitters work?

If they function and are in good working condition and are in good cosmetic condition, I may be interested in buy all that you have. What would you be asking if I wanted to buy it all?

Best Regards.
Eric

CCA'34 does have speech constraints (prohibition of obscene speech, and limitations on profane and indecent speech), but in general the topics of speech are unconstrained. That is as it should be in a free society. If we do not like the ideas being expressed, we are free to turn the dial. Regulating the content of speech is a slippery slope down which we dare not descend without great care and circumspection. But we shouldn't tolerate jamming and other hostile behavior which clearly goes beyond protected speech. Assault does not require physical contact to be a crime.

I have a couple solid-state radios which are less than ten years old whose
only use today are as door-stops - each is in need of an IC but of course
the necessary components were custom-made and are now unavailable. Yet my
30 year-old Galaxy GT-550 still purrs, and my 40 year-old Globe Scout
transmitter still burns holes in the ether.

>

I hav just aquirred a model 15 and Model 33 and so far the 33 is working great, and i understand the 15 is also in perfect order. I may need part later on, but still want to aquire more if i can give a home to some. I am in Oakley California about 20 miles West of Stocketon (50 miles east of San Fransico). If anyone has parts or any type of manuals/articles on how to setup for transmit, etc I would appreatiate it. I will share any info/magazine I presently have too.... Robert Hampton KF6FGH (925-625-4033) rjhamp@pacbell.net (I used 28's on the USS Coral Sea in the '70s so they are music to the ears... 76...

Interesting thread, guys..I have about three
6KD6 lifetimers..where in the world do you think they'd come up with
replacements? Would they buy from someone else, or do you thing Tandy has their
own stash somewhere? BTW, I've never saw a real problem with these tubes, at
least no more than other specific brands, anyhow.... JOE

How do you bore electricity?

>Tee hee! A sort of rounded 'E' with the double line
>through it. Said to be set to cause more trouble than
>the Y2k bug.

as a substitute try (=1,234,567 (=1

It can only be interpreted as an emoticon.
As the subject seems to raise so much emotion that would be appropriate.

Otherwise

=E =E1,000

might be OK, can it be confused with 123+E12

Trouble is that the FCC and apparently a few other folks,
think that the gummint OWNS the air waves, much like it owns the
sky or the air. No, they don't.

They can regulate the USE of these resources as long as we submit and agree
that it is a good idea for them to do so, but they are not unaccountable to the
people, even though YOU seem to imagine that they are!

Hello all, I am looking for any info you might have a Spectronics Digital Display DD-1.
I picked it up at a Hamfest as part of a buy (TS-520s) I was told that it "might not work" but that
it would work with the TS-520s.
Well it doesnt work, at least the counter wont count.

What I need is to know if it will work with the 520s ?
and does any one have a schematic for it ?

thx

QSL NET is still alive and well. Received information from the
owner/manager (Al) who said they had used a computer program to purge old,
inactive accounts and it accidentally deleted some, if not all, active
accounts. My best suggestion is to resubscribe to the service and get a new
conformation reply. Trying to send e-mail to him about this will not get
the desired results.

> Hi need some help finding a couple sockets for WE 212 tubes. Thanks Larry

These are even harder to find than the 212s themselves
One of the best solutions I've seen to the problem is in an old 1000w PA amp
i have here, made in the 1960s. The 212s are suspended in "string bags" made of
springs, and the connections are via 5/8 inch brass circular blocks with 3/8
inch holes drilled in them. They are held on with grub screws and wires attached
via QC connectors screwed to the sides of the blocks.
Roadie proof !!!
cheers
Mike

Every RS store has a bank of catalogs from various manufacturers from
which you can order components; one such catalog is devoted to tubes.
You'll poop your pants when you see the prices, though. I don't recall
from whom they order their tubes.

I have a serious problem with McGill's administration and I need your immediate assistance.

I am a student in the Chartered Accounting Department at McGill University.

On October 1, 1996, I started working at McGill University's Center for International Management Studies (IMS) to reconcile funds provided by the World Bank to the University.

However, I noticed that McGill's administration had been manipulating the accounts and falsifying the reports. The manipulations amount in the hundreds of thousands of dollars.

When I reported what I saw to the University's Internal Audit and to Professor Bernard Shapiro (McGill's Principal and Vice-Chancellor), the University expelled me from the CA program, claiming that I failed my exams. I wrote excellent exams, but McGill rigged the marking to stop me from reporting what I saw at IMS. Please contact Professor Shapiro at SHAPIRO@UMS1.LAN.MCGILL.CA and ask him why the university rigged my marks.

I tried to settle the matter with the University's Ombudsperson, Mrs. Estelle Hopmeyer and with the Legal Clinic director, Mr. Alex Pless, without success. When I went to see Mr. Pless, the University's security hastily dragged me outside the University. This action is a gross breach of the University's own Charter of Students' Rights which allows me to contact Mr. Pless.

My conflict with McGill's administration reached the University's Board of Governors and Audit and Finance Committee, but nobody listened to me.

I lodged complaints against the chairmen of McGill's Board of Governors and Audit and Finance Committee with Quebec's Order of Chartered Accountants, since the chairmen of the above committees are both CAs. However, I was given a mock hearing at the Order, and the President of the Committee on Discipline ruled, unjustly and unfairly, in favor of McGill's chairmen. You can understand why, can't you? You could confirm the details with Mr. Nicholas Chagnon V.P. Publications.

The lawyers whom I contacted so far are not defending me. I suspect that the Dean of Students Professor Rosalie Jukier is influencing these lawyers not to defend me. Please go to the office of the Dean of Students and ask her why is she stopping my lawyers from defending me.

To silence me, a collaborating judge ruled that I may not contact anybody at McGill. He also ruled that I am not allowed to be on the University's campus, although I did nothing wrong. You must contact me to see my evidence about the funds manipulations at IMS and to reestablish justice at McGill.

The University sent me to jail although I am innocent of the harassment charge which Dr. Lees is accusing me of. Dr. Lees sent me to Riviere des Prairies Psychiatric Detention Center, alleging that I have been harassing the university's staffs. This is not true, since I was only questioning the staffs about the suspicious funds manipulations.

Now I am out of work, cannot continue my education, and the University is suing me for criminal harassment. The court ordered that I undergo mental evaluation. A conspiring psychiatrist alleged that I suffer from delusional disorder of grandiose type. This is a lie that is intended to silence me. Will you help me report my psychiatrist to the appropriate authorities?

You might want to confirm the above facts with McGill's Secretary-General, Dr. Victoria Lees at: LEES@UMS1.LAN.MCGILL.CA, but I advise you not to, because she will give you false answers.

Other strange events happened, and I will tell it all to you after you contact me. I request that you communicate with the University's reporters, student groups, the students in the CA department and your colleagues to expose the World Bank funds conspiracy at IMS.

This could happen to you or to your friends, so you must help me put an end to McGill's injustices. Also, I need your assistance. My family and I are in a desperate situation because of McGill's emotional and financial pressures. Would you help us in this respect?

Please respond and take action. Thank you for your collaboration.

I have a serious problem with McGill's administration as well so I
will be quitting the study [degree program] by the end of this term...

doing something else from winter.
Too bad that McGill is losing the students like we are.
I will be posting these articles in concordia.general, can.general
etc. and you should do the same to avoid getting excellent students in
this fuc*king university.

>questioning the staffs about the suspicious funds manipulations.

yep. they will do whatever they can do to prevent you from finding
out the evidence. Thanks for your post. I will be using this as
well to kick this university's staffs out of their administrations.

****
I talked with one of the students here and he told me that professor
changed the course outline after the final exam is written. That's
not acceptable. (i.e. changing the final exam weight from 50% to
2/3 of final mark). It is ridiculous. Just keep up posting and
I will post my stories also.
****

>Now I am out of work, cannot continue my education, and the University =
>is suing me for criminal harassment.

let's sue this university. are you willing ?

> The court ordered that I undergo =
>mental evaluation.

probably I have to go under mental evaluation as well !!!!!

> A conspiring psychiatrist alleged that I suffer from =
>delusional disorder of grandiose type. This is a lie that is intended to =
>silence me. Will you help me report my psychiatrist to the appropriate =
>authorities?
>
>You might want to confirm the above facts with McGill's =
>Secretary-General, Dr. Victoria Lees at: LEES@UMS1.LAN.MCGILL.CA, but I =
>advise you not to, because she will give you false answers.

>Other strange events happened, and I will tell it all to you after you =
>contact me. I request that you communicate with the University's =

>reporters, student groups, the students in the CA department and your =
>colleagues to expose the World Bank funds conspiracy at IMS.

>This could happen to you or to your friends, so you must help me put an =
>end to McGill's injustices.

YES !!!!! Let's sue this university. I am serious about it. With
series of events like this, I am sure that the ones who are in charge
of this university MUST BE KICKED OUT from this institution.

> Also, I need your assistance. My family and =
>I are in a desperate situation because of McGill's emotional and =
>financial pressures. Would you help us in this respect?

I will be putting my money if you and others are willing to take this
university to court etc. in question.

Just to let you know... there are students who know and who care about
the ongoing incidents at this university.

To newsgroup and CC: Al Waller, K3TKJ via e-mail:

I wish to apologize to Al, K3TKJ, who runs www.qsl.net for the obnoxious tone I used in pointing out a problem I was having.

I was frustrated because I couldn't get through to anyone at qsl.net, and the web site wasn't coming up here. I shouldn't have phrased it so rudely.

Sorry, Al! I just missed getting the e-mails!

Apparently the server was down for a while, and the data got reformatted such that the forwarding to me stopped for some time.

In actual fact the site had not disappeared but was apparently suffering from a brief network glitch, maybe not even locally at the server level.

Thank you to everyone who offered help and suggestions, and again, I apologize to Al for any perceived harm by pointing this ouit and asking for help.

Once I figured out how to contact him, he quicky corrected the problem, and correctly chewed me out for the way I presented this to the world.

I recommend qsl.net to anyone who would like an e-mail address on the internet that makes it easy for other hams to find them. Thousands of people have registered with qsl.net and it is a great and important service, which was why I missed it so much!

Recently, I wrote:

>Hi - does anyone know what has happened to:

Roy,

I have an Eico 717 that just needs a little work in thepower supply, bad electroyltic . I have not had time to work on it and have several other keyers in my collection. Cosmetically it is a 9+. If you're interested, $25 plus shipping and insurance from St. Louis will send it to you. Let me know if you're interested.

If the two of you have treated your collegiate responsibilities as shabbily as you have your responsibilities to make appropriate posts to USENET, I must say that I am not surprised at your current predicaments!!

According to my count, the original post in this thread was cross posted to NINE newsgroups and was appropriate to exactly NONE of the nine groups.

Masa, your continued disregard for the USENET culture and conventions has demonstrated your ignorance or your arrogance or both for many months . . . Perhaps your attitude has now spread to your friend . . .

What does/will it take to get through to you?

Bill

Anyone know much about a Cubic/Swan Astro-150A synthesized HF rig?
It was one of Cubic's last amateur products.

I'm having some problems with synthesizer lock-up.
Anyone have a tech manual with schematics and/or know of a parts
source?

I just mentioned what I paid for them at Dayton. I didn't tell anybody not to buy Chris's tubes at his stated price. I am not a price cop. What a person pays for his items is between the seller and buyer. I did not intend to start an arguement. I just wanted to inform others of what I paid for similar items and where I got them. What a person does with that information is up to him..... KB4AEP

Wanted:

Any documentation, courses, or circuit cards for the
NIDA MiniLab 400.

The MiniLab 400 is a single unit with O-scope, digital
multimeter, signal/function generator, variable AC
and filament supply, plus 3 variable DC supplies.

The lower half of the unit pulls out as a drawer, has
an area for the aforementioned circuit cards, plus
meters, speaker, power supply and load switching.

There are some photos on my web site, in the
for sale/trade section.

881. SX-28A help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-11 00:00:00 UTC
From: Joe Schreiber <jschreiber@netcarrier.com>
Message-ID: <6vqnt2$p08$1@supernews.com>
Source record: 96961

Hi,

Any SX28 experts here? I'm trying to revive a dead SX28A. The only thing coming out of the speaker is internal noise. A 455kHz (400hz modulated) signal injected to pins 4&5 of the detector will produce a nice, clean tone. The same signal injected at the plate of the second IF tube (6SK7) will produce the same tone, but at a lower amplitude. One of the capacitors of T3 peaks nicely, but the other one appears to have little or no effect. As I move the signal injection point further upstream, the tone at the speaker gets weaker, and I need to increase the amplitude of the signal generator. Injecting the signal at the plate of the detector (6SA7), I need full power (3V p-p) just to get a barely audible tone at the speaker. One of the coils in T1, and one of the coils in T2 peak nicely... the others don't have much effect. I cannot get any tone from injecting an RF signal to the grid (pin 8) of the mixer and tuning the receiver to that frequency. The output of the local oscillator appears to be OK. Also, injecting a 455 kHz signal into the earlier stages of the IF will only produce a signal when the AVC is turned on, and not when AVC is off. Injecting the signal at the detector, however, will produce a tone with the AVC on or off. Any help would be appreciated.

Thanks,
Joe

For what band? I don't recall anything from late 70's or early 80's,
but it would have been easy to build an FM. I don know that there's a
PVC directional antenna available, I think from Ramsey, for AM band.
I've heard good things about it, but no first-hand experience.

FWIW

The tube radios used in most Russian aircraft were backed up with solid state. The use of tubes was to cover the craft being made deaf by an EMP.

Russia continued to develop the vacuum tube right up to the end of the cold war, for just such an eventuality.

I presume nothing. Whether or not the (former) UK goes
in, if you're trading with 'Euro' countries then you'll
STILL need the software - and, according to the press,
software capable of juggling with up to three currencies.

If you honestly think you and I will have ANY say in
this matter of out or in, then think a bit harder!

I have restored probably about 8 to 10 SX-28's. I would suggest that you replace the paper coupling and bypass capacitors in the IF stages if you have not already done so. Leaky caps can cause the kind of problem you have described. I replace them as a matter of course. Saves a lot of time.

I believe that it was the solid state being backed up by vacuum tubes..

> Russia continued to develop the vacuum tube right up to the end of the
> cold war, for just such an eventuality.

Russia is now one of the largest suppliers of audio tubes to the HiFi
and guitar amp industry, mostly in the U.S. and Britain. China is the
other largest supplier, and some are made in east European countries.

It is said that the Chinese 7025 preamps are better, but it is agreed
by most musicians that the SovTek 5881 are the best audio output tubes..

OK

When you are at the position in your word where you want the special
character;
HOLD DOWN the [Alt] key and on the NUMERIC KEYPAD (the little one at the
right of the keyboard. TYPE the number for the code of the character that
you want to insert, the "leading zero" must be typed.
This only works from the numeric keypad NOT the numerals along the top on
the normal keyboard.

To find out what the numbers must be for any character if you have

Start | Programs | Accessories | System Tools | Character Map

Select the font as Courier

As you highlight the characters then the code is given in the bottom RH
corner of that Window.
Some of the Characters have direct keyboard entry, but those keys may not
correspond to the fonts used on the net.
To find the Alt code for such a character if you look at the codes at each
side of the one which you want you will notice that they are laid out
sequentially, so you can easily work out the code that you want.
By using this code the binary code for that character is placed into your
document and will be interpreted by most of the mail readers with an
appropriate character depending which fonts that user has installed and
selected.

Alternatively you can copy and paste the required characters from Character
Map.
I have a short cut button on my quick start tool bar as I frequently need
mathematical symbols and Greek in many of my applications.

Here is a selection of symbols from one line of Character Map from
character Alt+0160 to character Alt+0191

```
 
```

The first character is a non printing one so doesn't show, but is there none the less; the first character that you can see is

Alt+0161

.: the sign is 0161 plus 2 along = Alt+0163

One of the most useful signs is
, see if you can work out the code for it.

You can do better than marks for it I'm sure.

It's surprising what an uproar this has caused... Has it occurred to any-
one how much work Al puts into this server? And how little he asks in our
return? I was a packet radio sysop years ago, I remember well what it can
be like when something like this happens.

Best Wishes,

I am a relatively new ham (5 months) and new on HF (2 weeks), I've
been listening in to the 80M nets ... people are tuning up on top of
the net ... for long periods of time (ie. 1-3 MIN.).

This is very bad ... some like me using QRP cannot compete with that
kind of "willful Interference". Is this something that the FCC could
investigate? (I don't mean this specific incident but this type of
activity in general!)

Source record: 96762

Let me say that there has been some misunderstanding. I have been sent many many e-mails from folks who have had good delaings with William Lockwood.

Apparently he was away on vacation, and there was a misunderstanding with the banks on my part. If I kept better records I could explain what happened, but it looks like the first money order he sent was cashed by someone - either me or someone who got hold of it.

I chatted with Mr Lockwood this evening, and he explained that the first money order had been cashed and that is why the bank stopped payment on the second one. I don't know for sure but I don't think I ever got the first one. However, I do NOT think Mr. Lockwood did anything wrong nor would he.

If I have in any way cast any shadow on his reputation by my remarks I apologize to him. It is not worth $35 to me if there is any doubt that the mistake could have occurred somewhere else in the process. If I cashed the first money order, then I don't remember doing so, nor do I have any record of it, but it could have happened. I can tell an honorable man when I talk to one, and especially when so many other people write to attest to his good character.

Steve
I could be wrong but I do not think the Thor was an amplifier. If I
remember right, it was a medium power 6 meter AM transmitter which
required the matching power supplu / modulator unit which was sold with
it. It was a very nice sounding rig and usually put out one of the best
signals on 6 meter AM.
$25 was a bargain!

Hi Clay,

I have a ship's receiver that says on the front panel:

ITT Marine / IMR-5000

But on the rear panel it says:

Plessey Model: IMR-5000

When I looked up Plessey in "Shortwave
Receivers Past & Present", by Fred Osterman,
I found pictured several receivers that were
similar to my IMR.

Plessey's address is listed as follows:
(1992-1998)

Siemens Plessey Electronic Systems
Grange Road
Christchurch, Dorset
England BH23 4JE

945. Loud audio hum

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-12 00:00:00 UTC
From: Chris Seeber <cseeber@edgenet.net.xyz>
Message-ID: <3622AF75.7932498E@edgenet.net.xyz>
Source record: 96769

Hi,

I have a National NC-57 circa 1945 receiver. It worked well a few years ago and was then put away. I pulled it out last week, and it now has a loud hum in the audio. It's there when the AF gain is up or down...it doesn't matter. I can hear broadcast stations behind the hum, but the hum is real loud. It's almost as lud as a smoke detector. I checked the voltages that the manual gave for the tubes and although they were a little high, they were all within tolerances. I can't see anything in the radio that looks like a burnt cap. or resistor. There is a transformer attached to the speaker that looks as though some of the paper has been ripped away. In the manual it's described as a "5,000/4 Ohms". I only have a VOM and an oscilloscope (that I don't really know how to use) to test the radio. Does it sound like the transformer may be the problem? Is there any way to test capacitors with the test equipment I have? If it does turn out to be the audio transformer, how would I go about finding a replacement?

Thanks very much. I'd really like to get this radio working again.

Chris Seeber

Chris,
I would replace your power supply filter capacitors. They can dry out during storage and cause just the symptom you describe. Sometimes they can be "reformed" but I would just replace em. I put this in the newsgroup so the real electronics gurus can comment too. . .

950. Re: Loud audio hum

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-12 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <6vui3j$sf1$1@supernews.com>
Source record: 96774

That is a classic symptom of failed filter capacitors
in the power supply. These are usually found inside an
aluminum cylinder mounted upright on the chassis,
anywhere from two to four capacitors inside the cylinder.

Many times, on the side of the cylinder you will find a
printed or embossed listing of the cap values and voltages
for each capacitor. Some times there is also a symbol
next to each value, such as a square, triangle, or semicircle.
Those symbols will be duplicated on the underside of
the cylinder to show which positive terminal belongs to
each capacitor in the cylinder.

Of course, if you have a schematic for the radio, it will
tell you exactly what you need.

The capacitors in the cylinder each have a separate
positive terminal and will share a common negative
terminal. Polarity is important for this kind of capacitor,
so don't mix up positive and negative.

The simplest repair is to cut the connections on the old
cylinder, leave it in place (for authentic appearance),
and hook up new replacement capacitors under the chassis,
using short lengths of hookup wire if needed to make
connections.

The replacements should be equal or slightly greater in
capacity, and equal or greater in voltage, than the originals.
For example, if an original calls for 20 mfd @ 450 volts,
you could replace it with 20 mfd @ 600 volts, or even 25 mfd.

If you are a purist, or you're restoring an especially
wonderful set, you might go to the trouble of removing the old
cylinder, taking out its guts, hooking up the replacement
capacitors to fit inside the old shell, and wiring the whole
gizmo back in place as if it were original. That's more
fuss than most people are interested in, but I have done
it on a few occasions.

Terrible performance, Great Looking, own two. Love them. Don't have a clue as to dollar value. Seriously, they are great SWL receiver for SW broadcast and not much of a receiver for ham use although I've used 'em on CW with some success provided my hand was steady on the knob.

Hi, Dont know about the SB-10, but once upon a time I used a coil driven
by an argonaut (about 2 watts out on SSB) dropped into the driver side
coil of the 6146's and I was able to drive them and talk to my buddy.
(think I only used it on 75 meters) I did have to re-bias the 6146's to
class AB or AB1?? (it's been 20 years). I biased them linear anyway.
this way I didn't have to butcher the rig. (if you don't re-bias them
though they are class C if I remember correctly and you will generate
spurs from here to there and back). I got the biasing figured out from
data in the old ARRL hand books back then. It ain't easy but I did get it
to work. Hope that is some help.

962. An old book for constructors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-12 00:00:00 UTC
From: Mark Grindell <markg@xenotech.com.au>
Message-ID: <01bdf610$e5cd7980$1d00a8c0@mark.xenotech.com.au>
Source record: 96907

Dear folks,

Can anyone supply any details whatever about a book...

I think it was called How to build you own radio", and was by someone with a name like "Barrett".

It was quite old, even in the 70's it was a bit ragged looking.

It took the reader through crystal set construction through to basic valve operation, and then had a section on transistors.

The construction chapter went into great detail in regard to chassis drilling, and so forth, and one very distinctive feature of the book was a progression from a single valve receiver, with quite severe limitations (but bettre than a crystal set) to a two valve, regenerative design, and a third design with quite high headphone power, and greater selectivity, to the final master piece - a four valve design powering a loudspeaker!

The beauty of the book was the ability of the author to explain every stage of the design and accompany the reader right through to the end... The transistor section only describes a simple two transistor amplifier.

There are graphic warnings about not heating transistors up too much, and absolutely not connecting or disconnecting them!

Does anyone recall this book - or better, has anyone got a copy they wanna sell?

Mark Grindell

Well, nobody wanted the PBX telephone network thing.. so I dismantled it!
Now I have a million cards with ic's, cpu's, led's and dandy little
switches! the big thing is a nice self-contained power supply which I tested
at 52volts DC! I'm hoping it is an amp monster, too...
It is an Executone Enterprise PBX, removed power supply is about waist high,
all heatsink inside, 60lbs, 3blade fuses everywhere... and caps the size of
a pepsi can. has 'alarm' led for what I assume to be a fault protect,
117vac with sticker on back saying series 2 and ps-a?? vom says 52vdc at the
terminals.
Question: anybody know about this thing and how to turn it
down/convert/resist/whatever to 13.8? how to test amperage output without
blowing something up? Hams dream supply or welder? help!!
thanks!
Randy

Hello, I have the following Western Electric tubes in stock and ready
to go. All are NOS (new old stock) in the original boxes unless stated
otherwise. All are tested on the Hickok TV-7D/U to insure quality.
Where there is a used tube, I've provided the TV-7 readings as follows:
M= minimum acceptable for good tubes
T= this tube's readings.
These are all of the W.E. that I currently have in stock. I also have
a huge inventory of other types of NOS and TV-7 checked tubes. Inquire.
Shipping and optional insurance extra. Thanks, Read on.....

I would tend to doubt that tubes were used as a hedge against EMP, for in the case where solid state was needed most, in military portables, they used tubes which had a wire cathode. This is common for battery set tubes, and tho the design is very good, it is also made so by very close heater-grid 1 spacing. These tubes are VERY suceptible to EMP and in fact can be blown out from a few tens of watts of incident RF.

Hello- A friend and I have come into possession of a ship's
receiver from the fifties, an IMR54 from the
International Marine Radio Company Limited
of Croyden, England. Does anyone know
the history of this company? Was it related
to the Marconi company? Can anyone
point us to some appropriate web sites? This receiver seems
to be in great shape, and we also have the
complete operations manual.
We are going to try to get it up and running
using a conservative variac approach.
Anyone's specific or general advice would
be appreciated. The radio was made in the
early fifties, built like a tank (134 pounds!),
and seems very sophisticated in design,
with all sorts of fail safe and self checking
aspects, and includes a fresh replacement
tubeset. Also, I would be happy to arrange
to get a copy of the manual, with schematic,
installation templates, and a very specific
component list to anyone interested.
Thanks for you interest.
Clay Turner

979. FS Nice S85 - Hallicrafters

I have two roller inductors. Both Porcelain. One is a very large unit capable of handling very large power. The roller is 9.5" long and 3.5" wide, it has about 80 turns of wire. The contact rides on a glass rod. Very smooth turning, and in excellent condition. It will handle from broadcast band all the way up past 30MHz. This would be great for a large amp or a large antenna tuner. $175 shipped.
The second Roller is much smaller but equally the same quality. The roller measures 4" long by 2" wide with 24 turns of wire. This would be great for a smaller tuner or transmitter up to a KW+. $75. Both these roller inductors are in excellent shape. I just changed my mind on the project I was working on. 73 Chris VE3NGW/W4 Florida

Yes, Try International Crystal Co:

International Crystal Co.
701 W. Sheridan
P.O. Box 26330
Oklahoma City, Ok 73126

Tel: 1-800-426-9825
FAX: 1-800-322-9426

ICM may have moved, but the info
above is what I have...try it..

They should have a cross reference from the
motorola part numbers for the crystals..
You can also give them the model number
of the the radio itself and they can
cross reference the info from there..

i.e. -> H34FFN3100A or whatever your nameplate
says on the back cover...

I got one new as a birthday present from my parents in 1963. It
was a general-purpose HF receiver that would copy CW, tho the
bfo was always kind of jumpy. For a consumer product it was
basically a nice set. My first HF radio was a BC358-Q that belonged
to my father and I would tune around for hours listening to stuff
The '348 was much better of course! :-)

I enjoy ham radio when it is actually getting to know other
hams on the air and being able to run into them more than
once..

I am very active on 80 and 40 meter pactor/gtor and find
this mode very condusive to a long-winded "let's share war
stories" type of operation. I am not into contesting, but if
you are, then that's your niche in ham radio. Personally,
exchanging signal strength reports and qsl information, only
to run off and do the same to the next station seems a waste
of spectrum resources...

Gary, I agree that the FCC should be enforcing violations of FCC rules, however I think that the FCC should NOT be in the business of punishing what I would regard as "bad manners" or "differing viewpoints" ... I think that in SOME cases, what operators define as the "80 meter cesspool" is disagreement over content of a conversation, as opposed to willful interference by one operator against another....

Not to mention, that most of these are robots.

Basically the whole disease is what General Patton referred
to as "paper hangers."

That is, people who's sole lease on life is to accumulate paper
to hang on the wall. The extreme being people who belong to
Mensa type organizations. If their IQ was so high, they must
realize how stupid the whole idea sounds. But that isn't the
case.

There's four things to hang on your wall: 1) Your High School
Diploma, 2) Your College Bachelors Degree, 3) Your College
Masters Degree, and 4) Your Doctorate.

Everything else is akin to mowing the lawn...

Steve

Actually, you probably should hang your station license there so
you don't forget to renew it in time.

But then again, I don't know why you'd waste space with the above when
you could put other things that are more meaningful up instead.
(like photos of places you'd like to return to, awards from other
parts of your life, a poster or two......)

What is the condition of the 1944 handbook? Also, is it the hardback version?

(snip)
>==========
Actually, not quite true. The HQ-100 and 110 series had smaller
cabinets than the 145, 170 and 180 and the matching speaker was the
s-100. The larger cabinet receivers used the S-200. If you really
want the matching speaker for the 100, you will want the S-100 speaker
as when it sits along side the HQ-100, it is the same height, whereas
the S-200 will appear too large.

Hope my memory is correct.

1012. SBE-36

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-13 00:00:00 UTC
From: bobd1998@aol.com
Message-ID: <19981012204257.22350.00000098@ng07.aol.com>
Source record: 96781

Anyone remember Sideband Engineers? If so, remember the SBE-36? This was a brushed-aluminum faced 500 watt PEP transciever with a Nixie-tube display.

I had purchased one of these used at the Rochester (NY) hamfest in the late 70s and never got it working. I sold it back then but was always intrigued by this radio. Well, after a couple of years of looking around for one, I found TWO. Different locations, different sellers. One was supposed to be very nice, and one was to be for parts only.

To make a long story short, the "good" unit was a hatchet job (heavily modified and missing parts) and the seller lied to me about its condition. The "bad" rig turned out to be very nice. Receiver worked and 200 watts output on CW even. No SSB though (I think there is something minorly wrong in the ALC circuitry somewhere.)

The working (formerly "bad") rig has a non-working digital display (I was told about this beforehand). I plugged in the hatchet job rig and of course nothing worked. EXCEPT THE DIGITAL DISPLAY!! It should be a simple matter to unsolder the hundred or so wires connecting the diplay module with this radio and put it in the working set.

So, with a little effort, I will have a working SBE-36, and perhaps be one of the very few who does.

Which brings me to my point - Ham Karma. Anyone want to venture a guess on what the odds of these two radios coming together? In one place and at one time? I have to believe Faust Gonset's (SBE's founder) ghost had something to do with it somehow.

Which leads to my last point. Anyone out there have one of these? Do you want to e-mail or swap stories about the rig? Do you want to sell it or sell some parts (like a CW filter?) I came across a nice article in Electric Radio about the SBE-33 and SBE-34, and I was thinking of continuing the series with an article about the SBE-36. Any info would be much appreciated.

73s and thanks for reading this lengthy posting.

Source record: 96786

ETO/Alpha PA-70V Liquid-Cooled Amp in Very Excellent, extra nice condition. This is the amp that is identical in appearance to the Alpha 77Dx and 77Sx, but uses a smaller, more
compact cabinet. The amp is very clean inside
and out. Full output using a single 3CV1500A7 triode with attached "water boiler." This is one of the few amateur-class tubes that can be rebuilt to original Eimac specs. This amplifier takes distilled water for cooling and runs extremely quiet, using only a whisper fan for supplemental air convection past a passive radiator. Factory's glitch protection and AG6K parasitic mods
performed. Output circuit is extra rugged, using a Jennings vacuum variable capacitor for output tuning.

The entire plumbing system is new, using all Teflon components from New Age Industries, Inc., which exceed original mechanical and electrical specifications. The tube was recently checked out by John Cavanary at Econco and was put through hi-pot and emissions testing. All testing results were excellent.

Amp comes with original factory manual and power cord.
I am asking $3295 + shipping and insurance. If you have any questions, I will be more than happy to answer them. .JPG images of the amp making full power available upon request.

1019. HELP - SB-200 Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-13 00:00:00 UTC
From: Les Blades <lblades@sover.net>
Message-ID: <01bdf650$1cc2ffc0$bcc988cf@lbladesnpP.sover.net>
Source record: 96788

I recently purchased a mint condx SB-200 amp - but I almost
get the feeling it was never on the air. I have gone over every
square inch of the unit and checked all wiring, solder connections,
etc. All is well.

When the unit is plugged in and power up, all voltages, etc
are all correct per the manual. The only problem is that I get
no amplification whatsoever when I feed it with RF. I even measured
the RF levels at the cathodes of the tubes with the exciter on
and saw signal. Strangely enough I did see a little amplification
on 10 meters, but that was it.

Before I go and buy a new set of 572B tubes, does anyone
have any suggestions on what else I might check? I would hate
to buy new tubes only to find that the ones I have are fine. And
no I do not have a tube tester capable of testing these type of
transmitting tubes.

Please email me directly with your helpful suggestions. It is
just easier this way.

Email address here is: lblades@sover.net

Tnx,
Les (W1UT)

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday October 18th 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

1023. Re: Loud audio hum

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-13 00:00:00 UTC
From: Mark Grindell <markg@xenotech.com.au>
Message-ID: <01bdf6d4$b54f1380$1d00a8c0@mark.xenotech.com.au>
Source record: 96792

f117 is quite right. Something else that can produce a hum - but more like a howl - is faulty cathode bypass capacitors in the AF amplifier sections. This can convert these stages to very efficient oscillators, and they sound like a foghorn when they do this - but its usually at a frequency somewhat greater than the main hum!

Best wishes,

Mark Grindell

"Um, tubes? We have heat-shrink tubing on the wall there, with all that electronic junk. Would you like to join the battery club instead?"

Expect a tussle, unless you run across a greybeard. A few years past, I took back several cassette tapes that had been purchased under the lifetime guarantee, and the clerk gave me a very hard time. The store manager relented and replaced the tapes, but wasn't happy about it.

Do you have any of the cartons? I have one here I can scan. Guarantee on side says,

"Your dealer and REALISTIC guarantee this tube against operational failure for the life of the apparatus in which it is used. Should it fail for any reason except physical mishandling, return it for replacement at NO COST except shipping charges if mailed. RADIO SHACK CORP., BOSTON 17, MASS."

Seems to me you'd have an iron-clad case if you have the carton (date code on this one -- a 6BH6 -- is Jan. 1968, btw).

Who manufactured RatShack's tubes, out of curiosity? The tube that came in this carton is in my Heathkit GR54 (which I don't feel like tearing apart right now), but I think it's stamped "Japan." I'm thinking NEC?

For that matter, where do RatShack tubes come from now? Ex-USSR or Raytheon?

For many years, Hallicrafters Radio in Chicago produced radios which were marketed (and appealed) to two distinct segments of the radio marketplace (as did other companies, such as National). There were the "inexpensive" Hallicrafters general coverage radios, which had most of their appeal with new SWL's just starting out in the hobby, and there were very sophisticated Hallicrafters radios (with some rather "sophisticated" price-tags for their time) which mostly appealed to the "veteran" SWL's and ham operators. Prior to the S-120, there was the S-38 series, which became very popular. The S-120 sold for approximately $69 in the early to mid-1960's, and was quite popular as an inexpensive tabletop shortwave radio. I recall buying one, new, around 1964, to "replace" the old Stromberg-Carlson "tombstone" radio, in a beautiful wooden case with the green "tuning eye" that I hauled home as a youngster (in my "little red wagon"). Someone had thrown it out in the trash! When I plugged in that S-C radio, it immediately blew a 20 amp house fuse! After some repairs, tho, I enjoyed many hours of shortwave listening pleasure listening to it (and watching the green "magic eye's" magical glow). The S-120 also provided many hours of enjoyment; so much so, that I recently added one to my "boatanchor" collection for "nostalgic" reasons. Funny thing, I still enjoy the S-120...at least listening to the stronger AM SW broadcasters!

How much does it weigh without the cells (as long as you can provide a model number and dimensions)? Would it ship then?

From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <7017nb$7h1$1@supernews.com>
Source record: 96804

That is one of the most common shortwave receivers,
very popular in its time and still plentiful. In terms of
price/quality, it fell somewhere in the middle of the
Hallicrafters product line. Not the cheapest set you could
buy, but substantially cheaper (and more bare-bones)
than their top-line receivers of that time.

I have an S-40B myself, and like it a lot. I bought mine
in fine condition from the original owner and paid about
$30 two or three years ago. Even at today's prices, I
don't think that translates to more than $50 or possibly $75,
even for the nicest one. There are so many still in
circulation that it's hard to justify paying more.

Just my two cents.

Phil

>

It seems to me that working 100 countries is actually fairly easy given just a modest station and average sunspots. Getting the cards seems to be the devil, and then there's the nuisance of getting them to a checker if you don't happen to live in the USA.(actually, there was an accredited card-checker operating at the RSGB HF convention last weekend, which saved a number of people having to trust sometimes irreplacable records to the post)

DXCC certificates impress me, but chiefly as evidence of the perseverence of the operator and his or her skill in navigating pile-ups. The people with scores approaching the total number of countries that have ever existed have devoted most of their lifetimes to their pursuit, which has to be impressive. I find a station that can run moonbounce SSB just as impressive, I find a homebrew transceiver - especially if it isn't directly built to a published design equally impressive, too. The good thing about this hobby is that people can exert themselves in different ways.

> I wouldn't have had many, if any, meaningful conversations if I had
> spent a half hour per contact, instead of 20 seconds. And the end
> result is all the same. Nobody called me, they called my QSL card...

I'd never thought of that in those terms. That's a startlingly good way of putting it.

Cheers

John,
Here's a little encouragement...I'm new blood. Well, mostly. I had an interest in ham radio growing up, but lacked money and opportunity to do anything about it, so I never got a license. But now I'm back, and boning for the Tech exams and studying my Morse so I can move up from there.
So don't give up hope, there are new folks on the way... :)

Well Randy, Without actually looking at the supply, I would guess that it is probably good for about 25amps. A lot of the older phone supplies were used to keep a battery string charged as well as run the PBX. On most of the Executone gear, the 48VDC was used on the battery string, and 24VDC (or similar voltage) was used to supply 'talk battery' to the line circuits. If you have been planning to build a solid state linear, this supply (48VDC) may be the 'cat's meow'. I will dig around and see if I have any paper work left on those Executone beasts. 73 de VE6INM

I have a manual for the Clough-Brengle Ocillograph, dated 1936.
I can't for the life of me find a model number anywhere in the manual.
Can't find it on my scope either, but if you give me a little of the front
panel description, I will see if mine is anywhere near the same.

By the way, mine still works.

Regards
Reed

I am selling a Collins MP-1 12V power supply for the KWM-2/2A, and a 351-D-2 mobile mount for the KWM-2/2A. Both are in good condition. The sockets are very good on the mount and it comes with the two cables. The power supply is also in very good condition, and came out of service. Price for both items: $175., plus $10 for shipping.

1061. FS: Two HV Plate Transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-13 00:00:00 UTC
From: Dave Pedersen <n7bhc@gateway.net>
Message-ID: <6vvvk5$6hn$1@server2.wans.net>
Source record: 96874

For Sale: Two High-Voltage Plate transformers:

1. Manufacturer: Essex Wire Corporation, Chicago Transformer Division
Primary: 117/141/234/282 volts
Secondary: 4800 Volts CT at 475 mA or 5760 Volts CT at 321 mA
Size: 9.7" x 11" x 8.75" H , 102 lbs
Condition: Used, scratched paint
Asking Pric: $100 plus shipping

Here is what Surplus Sales in Nebraska said about this transformer:
4800 vct - 475 ma
(TP)D3221B
Primary: 117 / 141 / 234 / 282 vac, 50/60 Hz. Secondary: 4800 vct @ 475 ma
or 5760 vct @ 321 ma. We loaded this beauty down to 1 amp on the 4800v
winding with no appreciable voltage drop. Let's just say she is very
conservatively rated. Hermetically sealed. Stud mount at bottom. 9-11/16" by
11" by 8-3/4" high. 102 pounds.
$395 each

2. Manufacturer: Industrial Transforemr Corporation
Model: ITC No. BP-7200 (TF1RX02YY)
Primary: 115/230 Volts
Secondary: 6336 Volts CT at 500 mA
Size: 9" x 10.25" x 8.25" H (without
projections)
9" x 12.5" base, 10" H (including
base flange and Voltage Studs)
Weight: Approximately 105 lbs
Condition: New in factory box, inside wooden shipping
box (approx ship wt. 115 lns)
Asking price: $135 plus shipping

It's me again.

After going through the 30 page manual page by page, I have realized
that it is not a service manual for the scope, but rather a manual
that shows you how to USE the scope to repair radios.

Lets hope that mine never quites.

Regards
Reed

I have a Central Electronics 20A Exciter that needs a good home. It is
one of the first SSB transmitters available. 160 - 10 meters
It comes with 5 crystals (mostly 40 meters), and is in original,
unmodified condition. The case does have some surface rust and will
have to be cleaned and painted for it to be nice. It is in "as found"
condition, and will need a good cleaning. Asking $100/B.O.
Located just north of San Francisco, and would prefer pick-up.

Doesn't this receiver feature a pair of 6V6s in push-pull for the audio? How would its sound quality compare to, say, an HRO-50 or 60...? I'm more of an SWL anyway, so something like that would have a lot more importance, at least for me personally.

> the S-200 will appear too large.

> Hope my memory is correct.

It is... I bought an HQ-180 several years ago, minus the speaker. The following year I found a Hammarlund speaker at the Dayton swap, and without thinking at all just bought it... a couple of hours later, as I was carrying it around, it started to dawn on me that it was a bit on the small side. Sure enough, I got the S-100. So I lived with it like that for a few years, until I crossed paths with a gentleman who owned an HQ-110 and an S-200, but wanted the smaller one. You can guess the rest. We're both happy now...

It appears that the S-100 is an open-back unit, whereas the S-200 has a pressboard rear panel; at least mine does.

Matching speakers are always so tough to find. I've been searching for one for my SX-71 for over eight years now. On the other hand, I have this National speaker that I need to find a matching NC-109 for. :^)

Re: The R-808
Conrad:
I've had two and they are fine receivers, even if
they are heavy. I don't have one any more or a manual
as I traded them away, so don't remember where the
115 VAC contacts are on the front connector.
If you look behind the panel, there are two heavy
chokes on a piece of angle stock
designed to keep RF off the AC lines.
They have tuning slugs. Those two
chokes go to the 115 VAC terminals.
I'd double-check it though, just in case
my memory is faulty.

One problem all seem to get sooner
or later is mechanical instability. Tap it and
the frequency wobbles. I've serviced five of them
and in each case, the problem was intermittant
contact on the big removable RF deck.
If you look at the big RF deck in the bottom
of the radio, you'll see it will come out as
a large module. You'll have to set the dial at one
end of it's travel, loosen the screws on the coupling
between the tuning dial and the module, slid the
coupling back, then undo the antenna wire. I think
there are a couple of other cables with BNC connectors to
disconnect as well. Unscrew the module and lift it free.
Clean the module contacts and socket with non-abrasive
contact cleaner. Take off the side panels and check
the tube sockets for cold solder joints.
I found unsoldered joints in two radios.
Important: Wiggle every tube in its socket. These
sockets get intermittant from sitting around.
Put everything back together and your instablity problem
should be gone.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale: WE 51S1, works great, not dents, all knobs are there, Paint job is average, works on all bands, PTO could use an endpoint adjustment, front panel is nice with a few small blems (paint loss and aluminum showing on bumpy surface) on the lower portion. Has the spinner knob and tall feet on the front. No modifications that I am aware of. One RCA jack has been replaced (antenna) with an aftermarket RCA jack. Has a good power cord also. I've had the receiver for about 5 years, sold its mate last year and recently picked up a round emblem unit with a dial lock so this one has to go to pay for the new toy. I have some documents on the unit but not original.

$1100 plus versapack fee and UPS from 95827

Thank you for the read.

IF I REMEMBER IT RIGHT...

LATE 60'S (66,67?) SBE WAS SOLD TO RAYTHEON WHICH WANTED ENGINEERS WITH RF SYNTHESIS BACKGROUND. THE NAME WAS THEN SOLD TO ROBYN, INC. THEY CONTINUE TO MARKET ALL SBE PRODUCTS UNTIL SUPPLIES WERE DEPLETED. THEY THEN SOLD THE 36 UNDER THE ROBYN BRAND NAME. THEY LASTED FOR ABOUT TWO YEARS AND FADED OUT.

THEY HAD FEW ADS IN CQ AND QST.

HOPE THAT HELPS - B

Both the 62A and the 62 have PP 6v6 outputs, but the 62 is a 500 ohm output only receiver if memory serves and you have to use another xfmr to get it down to normal VC zeees. The sound of the 62A when in good operating order is quite nice when played though a moderately baffeled speaker. The hallicrafter speakers from the same era are not too bad, but awfully expensive--a small HI FI baffled speaker would be a much better investment overall for the 62A. But this is just an opinion and probalby subject to criticism from the purests. Hi Hi

Good luck

Yep - that's Uncle Sam's eBay. R-390's for $5? HP Spectrum analyzers for $20? Scopes, meters and electronic grab bags? Real Military Boatanchors for pennies on the dollar?

Just send me $15 and I'll tell you how to find out what's for sale in your region and how to purchase it. My kit comes complete with all the federal locations and forms you will need. Plus instructions on how items are graded. As well as telephone and fax contacts for each region. Did you know, many auction locations now take VISA and Master Charge?

You have to agree, that's a lot for $15.

..of course you can get all the above for free at:

http://www.drms.com

If you still want to send $15 to me, I'll take it...

...

Last week, when shopping at the Fremont store, I was 'detained' by someone who
just watched me purchase a large number of items. When they demanded I waste
more of my time for them to poke through my belongings, I simply asked them:
"Am I under arrest?"
When they answered 'No, of course not, but...' I said "Have a nice day & left".
They CAN request you wait while they look in your bags, but they CANNOT detain
you without just legal cause.
'Just in case' is not just cause.
Try it next time you buy at Fry's.

I have two roller inductors. Both Porcelain. One is a very large unit capable of handling very large power. The roller is 9.5" long and 3.5" wide, it has about 80 turns of wire. The contact rides on a glass rod. Very smooth turning, and in excellent condition. It will handle from broadcast band all the way up past 30MHz. This would be great for a large amp or a large antenna tuner. $175 shipped.
The second Roller is much smaller but equally the same quality. The roller measures 4" long by 2" wide with 24 turns of wire. This would be great for a smaller tuner or transmitter up to a KW+. $75. Both these roller inductors are in excellent shape. I just changed my mind on the project I was working on. 73 Chris VE3NGW/W4 Florida

Source record: 96822

Hello, I have the following Amateur radio tubes for sale. All are NOS
in the original box unless stated otherwise. When possible, (some tubes
can only be tested in curcuit) tubes are tested with a Hickok TV-7D/U.
I have a vast amount of tested, miniature tubes for your recievers,
transmitters, test equipment, etc. at very reasonable prices. Also have
a pretty huge stock of all types of NOS tubes, please inquire about things
not appearing on any of my posts. I'm in the midst of learning how to
set up a website, perhaps in this life :o)... Shipping extra, runs only
3.00 and up, whatever the post office charges...insurance is only a buck
or so, depending on the market value for the particular item(s).
The large transmitter tubes have been checked via ohmmeter.
I will only shipped these fully insured.
Of course, i'll guarantee them to work properly, so PLEASE TEST CAREFULLY
IMMEDIATELY apon arrival, and if it doesn't do what you like, just send it
back right away for a prompt refund,(in original,shipped condition) less return

shipping charges. If defective, I'll absorb initial shipping costs.

Hello Bob,

Interesting thopughts on the SBE-36. I had owned an SBE-34 which was a pretty nice rig for its day. I remember walking into an amateur radio store in the Philadelphia area in the early 70s and seeing the SBE-36 on display. I asked the store owner about it and he told me that the SBE-36 had no relationship to the prior SBE line and the original Sideband Engineers company did not produce the 36, but the SBE company name had been sold to someone else. Everytime I see a 36 at a hamfest, I wonder about this. I often wondered if the 36 was actually made by a Jappanese company such as Star (which was later absorbed by Yaesu)

Do you know if the 36 was made by same company which made the 33 and 34 series?

This Argonaut is in excellent electrical shape. It draws less current than my 509, and may be more sensitive as well. It has been realigned very recently. Cosmetically it is average. It has one scratch on the top of the front panel that is quite noticable. It is an early serial number. There were only about 4,000 of these made according to a Ten-Tec ad. It is a really fun little rig for camping, and QRP. The reason I'm selling it, is that I already have a 509 and a chap in Ireland wanted it quite badly until I got it packed up and he found out it didn't cover 160 meters. (It covers the 5 old bands between 80 and 10 meters.) I'd like $250 for it.

From: thompson@mindspring.com
Message-ID: <70641g$ku4$1@camel0.mindspring.com>
Source record: 96655

A little research shows the SBE-36 was initially sold by SBE/Raytheon but sold to Robyn (Robin). Robyn actually changed the name to "Digital 500". It was a hybrid with 49 transistors, 6 FETs, 42 diodes, 30 IC's and 6 tubes (finals and drivers). Don't think counted the Nixie tubes.

Found an ad in QST Dec 1971, page 111.

Robyn also made test gear and was located in Rockford, MI.

Somewhere out there is a SBE-34 that is even more rare then the SBE-36. When SBE first brought out the SBE-34 they produced a working demo model with a Plexiglas type of case that was displayed from dealer to dealer. There may have been several produced but naturally I only saw one of them. The dealer was Howard Radio (K5ABO) of Abilene, Texas. The little see-through case showed off all those little-bitty things that were not in all those Collins, Hallicrafters, and Central Electronics boxes sitting alongside it. Despite it's looks, I knew it was a "real radio" when I found the Collins filter in it. I've always wondered what happened to that demo.

>>sale, with manual and even the original warranty card attached (one owner).
>>What's the going price for one of these?

I picked my S-40B up at an antique shop for $10.

It didn't have a mark on it, and worked when I plugged it in. This was a few years ago. Hamfest prices that I have seen are running around $50...But the value of any item is what its worth to YOU...not what someone else says you should be willing to pay for it. Its what YOU are willing to pay that is all that matters.

Well, the SB-10 will/should work with anything actually.
I bench tested mine this week using a Hewlett Packard 8640B signal
generator and watched the output with a regular scope and a spectrum
analyzer. Looks like it takes about 1 watt minimum before the mixers
work right and the signal looks like it should.

Hrmmmmm. sounds like another project begging to happen. Think I'll
see if I can work onybody on 40 SSB using the HP.

I have come across a small stash of acorn tubes (and such). I have no use for them, so if anyone can use them - make me an offer.
They are as follows:

954 (VT120) 3 ea. + 1 NIB
955 (VT121) 8 ea. + 1 NIB
956 (VT238) 1 ea.
958 (VT212) 2 ea. NIB
959 2 ea.
REL36 6 ea.
9004 6 ea.

Not Acorns, but in the same batch, I have:

HY-615 5 ea.

I have tested all but the REL36 and HY-615s. (My tester doesn't have settings for them.)

Mike:
Can you receive an attachment in Word 97? I have a SP-600, which developed a failure in the RF ass'y a few operating hours after I purchased it. I queried the Boatanchors reflector/list (a good source of information, worth subscribing to, along with the qth.net Hammarlund reflector) and received a number of responses with excellent information, which I put in a Word document so I could look at them when I started fixing the receiver. Consider replacing all of the black paper capacitors.

Good grief. I say he likes old hallicrafters. Really absurd really. Sure it's a buyers market and all, but people will get the idea this old stuff is really worth that much. Myself, I'd have to think hard to waste 100$, much less than 800$. For a radio that will probably jump 100kc if you breath hard on the table. P.T Barnum had it right... MK

Have the following for sale

13 ea 5691 GTE Sylvania black base $14
1 ea 5691 Fed Sup. code 25579 brown base $
Does anyone have a list of FSC manufacturer's codes? If it was a good tube, why is it not labeled on the base like most tubes?

10 ea 5691 Philips black base $14
16 ea 5691 Richardson Elect brown base $14
13 ea 5691 Sylvania black base $14
4 ea 5842/417A Amperex Gold pin $8
4 ea 5847/404A Amperex gold pins $11
2 ea 6550A General Electric $31
5 ea 407A Western Electric w/ierc shields $6
6 ea 310A Western Electric w/split shields $50 in AES
asking $25--Pulls but good.

The 310A were used in the SD ATT cable that has been a subject of discussion for a while. These were used in the amplifiers on shore and were not in the repeater amplifiers under water. They are coke bottle shaped, are about 6" tall, have a split conformal shield and come with the socket. The 407A were also in the SD ATT electronics radks, but I don't remember which module or their use.

All tubes are NOS except the Western Electric

What a coincidence, I bought a used Globe Scout 680A in 1965 for $65.
They seem to hold their value. By the way, I bought it in Council
Bluffs, IA from Leo Meyerson (founder of Globe Electronics, World Radio
Laboratories, and Galaxy Electronics).

Bear in mind that the 62 has no bandspread. It is pretty much impossible
to know what frequency you are on. Not great for SWLing. Still, very
pretty and a great conversation piece monaural FM receiver. Prices used
to be $100 to $ 200, but I've seen some crazy things on the auctions.

Source record: 96733

That's right, I've got this old boatanchor for sale. I'm not licensed (yet) so I've never transmitted on this.

The outer condition is probably a 6.5 on the 1-10 scale. Some rust and the paint is peeled a little. I have plugged it in and everything lights up, speaker hums, and I have received some voice on 2m. I don't have any crystals. I do have a copy of the manual that I downloaded from the internet though. VFO is also in the same condition, these units were both obtained as a set.

I'm looking for $75 or best offer, buyer pays for shipping. I'd trade for a good antenna tuner or SWR/PWR meter if the deal was right.

Contact me via email at jimd7002@aol.com.

Thanks

Jim

Any Hallicrafters addicts looking for a curiosity?

I've got an 11 tube Hallicrafters radio with original ten inch PM speaker.

What makes it odd (to me) is that I've never seen a console Hallicrafters and it only has two bands-- standard broadcast AM, and standard broadcast FM.

If anyone can tell me more about it, I'm curious even though I'm selling it.

Best offer gets it.

Hmmm. Has anyone asked the question: "What are they going to auction off when all the desired/useful spectrum has been sold?" It's not like there is a factory out there creating NEW spectrum space to sell. But then I guess those are the kid of questions that separate the bureaucrats from "us intelligent people"!

The SBE-36 was made by a company called Roblyn (not sure of the spelling). This company also made a couple of high end CB rigs. Was advertised in CQ and QST and there was a review. Not near my files right now so someone will need to look up.

SBE was a Raytheon Company at the last and was never clear if the SBE part of the SBE-36 had anything to do with SBE (SBE-33/34/SBE-LA).

Rich,

For a clock lens try R&R Designs at 1-800-372-4287.

You will often find a knob like the one you want at a hamfest (long, skinny, pointer knob). There is a guy out of Indianapolis who sells this type of knob..cant remember his firm's name. He is at all big hamfests in the Midwest and South. I got several knobs that match Hammarlund from him several years ago.

They did take a shot (I would suppose an unsuccessful one) at marketing home entertainment products, hi-fi systems and television sets, in the 1940s and 1950s. I have some advertisements for them that were clipped out of magazines from the era (I think "Life" magazine, mainly, judging by the size of the page).

The ads for the hi-fi equipment were quite tame in comparison to the hideous politically incorrect ads they were running for the S-40...

>
>Marc
>
From the excellent: "Radios by Hallicrafters" by Dachis, P. 51: S-41G,
1945-6, $ 33.50 original price, AC/DC, predecessor to the S-38, even though
the model # is higher. The "G" designates grey cabinet color. There is a
"W" white model also. The tube lineup and other obvious comments complete
the descriptive paragraph.
Good luck restoring it.
My personal observation: The cabinet is a pre-war design, and probably
could be put into production faster than the new S-38 cabinet and innards,
as well as component availability for AC vs AC/DC circuits (transformer?)
probably explains the model # discrepancy. They needed something to sell,
and this came together first.
73, George W5VPQ

I think you forgot:
When the ARRL started representing Kenwood, Yaesu and Icom
more than they represent US hams.

When the ARRL makes policy primarily for self preservation as
a money gathering business, instead of being an advocate of US
ham operators.

When the ARRL started making decisions based on
ad revenue instead of what's good for US ham radio.

The RF deck R/R routine is detailed in the manual. It is a bit if a bear, but manageable, and will take you quite awhile the first time you do it. I have been avoiding the job for a year on one I have that needs more caps replaced under the deck; if there are any tips on making it any easier than the manual routine (though I'd doubt there are, but you never know what others have learned), I'd sure welcome them. I never noted any shortcuts on the BA list (regarding previous post), but the digests got so long that I may have missed something. Email welcomed this subject.

It is hard to beat the incredibly thorough SP600 manuals, but I'mnot above fishing...(as opposed to trolling), and let's not waste bandwidth on repeating the black beauty syndrome & other well-known SP600 restoration issues.

FWIW, would like an intact main tuning dial scale from a junker, if anyone has one.

FOR SALE:

***Icom IC-T8A Tri-Band Handheld Transceiver
6 meters, 2 meters, and 440.
Cosmetic condition: 9/10
Operational condition: 10/10
Original battery and charger.
Several external antenna adapters are included.
Modification has been done to open up TX & RX range. RX range
is now 50-999.99 MHz (less cellular) Will transmit on a good
portion of that bandwidth, BUT IT STRONGLY CAUTIONED
Will work just fine on the same frequencies you would get out of
most other HTs, but some frequencies will TX and RX very weak
and will also TX on several frequencies at the same time.
$275.00 FIRM

Motorola Repeater with remote base, microphone, paging terminal, & auxilary
speaker.
Dual-frequency receive, single frequency transmit.
Currently crystalled for commercial band. (154.265 and 154.235 MHz)
Sold AS-IS. I do not have the manuals.
Will buy back, however, if it does not work correctly.
This item is for pick-up only in Lake Villa, IL. If you are interested,
please send me an e-mail.
I would be more than happy to have anyone seriously intersted in the
unit over to inspect it.
$75.00

120 Megabyte Tape Backup Drive with everthing you need to get
it going.
$15.00

(2) Radio Shack VOX Cassette Recorders Model # CTR-76
$10.00 each

I have two roller inductors. Both Porcelain. One is a very large unit capable of handling very large power. The roller is 9.5" long and 3.5" wide, it has about 80 turns of wire. The contact rides on a glass rod. Very smooth turning, and in excellent condition. It will handle from broadcast band all the way up past 30MHz. This would be great for a large amp or a large antenna tuner. $150 shipped.
The second Roller is much smaller but equally the same quality. The roller measures 4" long by 2" wide with 24 turns of wire. This would be great for a smaller tuner or transmitter up to a KW+. $65. Both these roller inductors are in excellent shape. I just changed my mind on the project I was working on. 73 Chris VE3NGW/W4 Florida

As an old ham,(47 years old, licensed ham for 32 years) I can relate to this thread. I "discovered" the internet a few years back and let ham radio fall by the wayside. To me the fun of ham radio was the challenge of making contacts. When I got my novice license, I was limited to cw, crystal control, and it was only a 1 year license. My first rig was a converted ARC 5 xmtr and a BC348 receiver. With only one crystal for the 15 meter band it was a challenge to make a contact --with anybody. As time went on, rigs got better and better and making contacts got easier until it got run of the mill to work whoever or wherever you wanted. Almost as easy as dialing a telephone.
Also, my main source of fun was tinkering with the equipment, building, modifying etc and the new rigs got so complicated with all the bells and whistles and so miniaturized that the average ham couldn't fix his own rig. We hams became appliance operators. Now, my fun with computers lies with building, tinkering and upgrading, my internet surfing usually is on the hardware newsgroups.
I am currently getting back into hamming, I bought a QRP rig and am working CW almost exclusively with a simple wire antenna..part of the challenge is there but its still not like the old days. I know very few young hams, most are old farts like me. If ham radio has a future 20 years down the road I don't know what it will be.
Another of my peeves is the cost of new gear. Computer gear has gotten dirt cheap but ham gear just keeps going up. Just an "entry level" station will set you back a couple of grand at least. I'm using a computer power supply to run my QRP rig...the 12 volt connection is rated at 10 amps...I paid 15 bucks for it new at the local computer shop. A 12 volt 10amp power supply from a ham radio outlet is about $100. It would be hard to spend over $2500 for a top of the line computer but a top of the line ham transceiver, antennas and accessories easily can go for $10,000 Of course part of the difference if there are a lot more computers sold making the costs lower, but the ham equipment manufacturers aren't hurting any.
Thanks for the soap box to air my 2 cents worth...
73

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Yea, I think that was the ONLY ham rig that ever used Nixie tubes.
Pretty nice looking radio.
Raytheon has a history of bidding military projects and then buying out companies, gutting the engineering department and then selling off the assets and laying everyone off. The "lucky" few who were chosen get to work another three years till the contract ends. If Raytheon got the bid... otherwise... so sorry.

Nice to see 30 years has not changed much. They bought out a large chunk of Texas Instruments - they really wanted DSP technology - they started laying off everyone here in Dallas two weeks ago...

. of course management knew what was coming and they cashed out early...

I have a Globe Scout that I restored, and I was wondering what type of microphone I should be looking for. I am not really familiar with the mic jack, as I am new to BA stuff.

Also, I have been having some minor trouble with arcing on the variable caps when I key CW. I have fixed the problem with one due to spacing of the plates, but the other is giving me fits. Any way to remedy this? Someone told me to use clear nail polish, but I am hesitant because it doesn't really correct the problem, justs masks the symptoms. Let me know what you think.

>report but ham radio as it used to be died when the internet came
>along.

Perhaps this is taken out of context, but I have to take exception
to this type of thinking that I frequently encounter.

I do not beleive ham radio died. The internet can enhance enjoyment
of the hobby, but cannot kill it. Perhaps packet BBSs will die some
day with the availability of email, but amateur radio will survive.

For me, owning equipment is a necessary part of having a station to
operate, not the other way. No offense, but NOBODY can do it "all"
as far as amateur radio is concerned.

I can understand if operating on the air is no longer fun for you and
there are many who just homebrew or design etc and never really
get on the air, but this is distinct from the "death" of amateur radio.

I see some spending time with internet, but I think the amateur web
page design hobby is a passing craze. Not that everybody shouldn't
have a web page or whatever, but this like having a QSL card will
soon be taken for granted - it is a means to sharing information about
amateur radio, not a replacement for amateur radio, though there are
no doubt web page design hobbyists. The web page is a means
not the end for most hams, I think.

I don't bring all this up to just disagree, but what do others think?
How does amateur radio coexist with internet? I think trying to
ignore the internet is sure to fail, so what role is it to play? Surely,
some will be enticed to pursue it as a hobby, much as the introduction
of microcomputers 20 years ago, but in the long run, these computers
became a vital part of the ham shack. I view the internet the same way.

Amateur radio as I think of it is an awful big hobby to have done
everything.

I have had such good experiences with Frys that I simply no longer
shop there.
If they have the lowest price in town , i will pay more elsewhere, and
if they are the only place in town, I will buy a workaround.
Their customer service and attitude is about the worst I have ever
seen.

Admitedly, the loss of my business is something they will never notice
much less care about, but I can hope that others will follow suit and
so send Frys the only message thet can understand.
Loss of income.

It did for me. I still use 2m to keep track of a group of close friends locally but gave up on the HF bands years ago (and never moved up to General) because I wasn't strung out on collecting contacts. I wanted to TALK to folks, exchange info and ideas, but all everybody (it seemed) else wanted was a quick contact for a QSL. Answered a CQ from a YL living in the city I was born in. Appended a question to the usual QTH, Rig is, etc. but she was gone - to busy to even reply ....! Tinninitis makes code hard for me but I perservered til I was sure I could pass the 13 wpm test - only to find it'd been changed to suit the "QHT is, rig is then gone" crowd. I haven't had an HF rig hooked up for close to 20 years now and have forgotten most code. I may try again if the restructure gives me general priviledges but .....

I can see where you're coming from on your opinion. I've been a General for
25 years and I get very disgusted with the immaturity that goes on 40
meters, especially in the evening hours. It sounds like they are grown men,
but they are real jerks, and are ruining our hobby. I've been using
Vocaltec's Iphone 5.0 on the web (with video and voice) and have been
talking all over the world. The sorry thing about it is, there is an awful
lot of jerks and perverts there too.
Again this is my opinion. 73's

The internet didn't kill ham radio for me, it just makes it quicker and easier to get information related to ham radio. There's lots of things to do on HF besides rag chewing; digital modes, slow scan, etc. I enjoy tinkering and building and that's ham radio too. I've never tried I-phone but I can't imagin that talking over a pair of wires rented from the phone company, via a computer purchased in the store, using software written by someone else could be as interesting as working around the world with a QRP rig and antenna you build yourself.

> of the hobby, but cannot kill it.
> 73, Brian KE7GH

I see that you are 39 years old Brian. By reading your post I would have thought you much older. Most of the hams I QSO are over 50. That should tell you something. There is not enough young people entering the hobby. One big reason IMHO is the internet. Why memorize a multiple guess test and study the code just to buy radios and yak on the air, when you can have all that and more on the internet. Further learning computer skills is valuable. I can't remember the last time I talked to a guy that had built his rig, or unless he is in the business knew how it worked. Teenagers these days are some of the best hackers. If the internet were around when I got started in 1957 do you think I would have been studying the code?? Not on your life. *Ham Radio* is not dead. The ham radio I knew in my youth is almost dead. The present day ham radio of communication ops will slowly evolve toward a CB type citizens radio. I don't think easier or no code tests will stop or enhance the trend. And I'm not sure it's bad. When I was young the government looked on ham radio as a ready pool of electronics types if needed in an emergency. That's laughable today. Today our computer savvy is what keeps our nation productive so the more young people that swing that way the better.

Doran Platt wrote:

> SX-28 went for almost $800..... You guys are right!!!

I would not be at all surprised if the guys who put Ebay together knew that "testosterone" would be an influential factor in a lot of the bidding. A lot of times, it becomes not merely a matter of owning or being chosen to own what's for sale, but also beating out the other bidder or bidders. It would probably be a similar thing to the sort of stuff that causes "road rage" on our highways or the mad fights for the most desirable toys for one's children at the stores at Christmas -- this desire to climb by stomping all over everyone around one's self...

I even admit to having got caught up in it myself, though to a MUCH smaller degree than this... bidding for some Commodore game cartridges here and there. A couple of the more scarce ones I've really gone up on, just because I really wanted to end up beating out the other guy to get them, just as much as wanting the item itself.

I did probably pay double what I should have to get an S-38, but it was in extremely good condition, the original cabinet finish and all that, and the back panel and original knobs were all intact, so it's highly restorable. I just decided to finally get the one I was after and just went in and fought for it.

A couple of days ago I lost out on a C-128 CP/M manual, because I lost track of the close of the auction and some guy snuck in a bid at the last moment and beat me. I went postal, and took it out on a completely different guy by doing exactly the same thing -- bid on a game cart with one minute left, leaving no time for them to get the outbid notice and respond before the auction closed. It's a jungle out there...

I think that the long term result of all of this is that we're going to start seeing less and less decent stuff at thrift shops and ham swap meets, because the seller gets to haggle prices UP instead of DOWN, as was always the case in the past. When you put it up for sale for that much larger of an audience, there's always going to be someone who's willing to shell out more, if it's anything of value and desirability.

I'm not sure how the sales commissions at Ebay work, but if it's a percentage of the final auction price, those guys are laughing all the way to the bank...

For Sale: Central Electronics 20A collection as follows:

1 each Table Model 20A, complete. Nice front panel and no broken knobs. Case is in fairly nice condition. Chassis is dull zinc and a few screw heads are rusty. Under chassis is fine and no major rust piles. $90 plus ups and versapack

1. each Table Model 20A, missing one audio transformer and a couple of tubes. Front panel is in good condition, no broken knobs. Some rust on screw heads, no major crud othewise. Could be used as a parts unit or restored if you can find the CE audio transformer or a suitable replacement. $40 plus ups and versapack

1. each Rack Mount Model 20A, Complete, This unit has the black wrinkle front panel. Unit is in fairly nice shape with all knobs and nothing broken that I can see.
$90 plus ups and versapack

These units are offered as is with spare 6AG7s nib included (6 each). I will include some documents with the units. There are no anit-vox units and I sold my CE vfo collection some time back. The docs include the Command Set modification instructions for VFO use. $200 for the three units plus UPS. from 95827. I'll pick up the versapack fees if someone takes all three.

Tnx for the read es 73

But what happens when there is a disaster and the phone lines are knocked out. How does computer knowledge help then? Actually, many of the computer savvy people today are software types only. They don't have a clue about the electronics inside the computer. If it quits working you take it back to the store where you bought it. Kind of like being considered an automotive expert because you know how to drive a car.

Al,

"Ham Radio as it used to be" died when....

...the Bureau of Navigation started requiring hams to have licenses
...the Navy succeeded in banishing us to 200 meters and below
...spark was outlawed
...phone came along
...Novices were created
...they gave 20 meters to the Generals
...SSB came along
...incentive licensing came along
...repeaters got popular
...Novices were given voice priveleges on 1296MHz
...No-code licenses started
...Barry Goldwater died

...whatever pseudo-tragedy you wish to blame it on......

> I have always been a ham of extremes....1961 1KW Am station, 1963 1Kw
> DSB station (1000w carrier modulated with 4KW of audio) It was the
> strongest radio signal coming from the US on any band worldwide. 1970
> 10Kw SSB on all bands......

Given that record of flouting the rules, perhaps it's a good thing
you've decided it isn't fun any more.

Hi,
Sorry to hear you gave up on HF ham radio. I have been using HF for
43 years now, and I am a ragchewer, DX or local. All on CW. There are
thousands of excellent ops out there, worldwide, who enjoy ragchewing.
I ragchew with stations, including DX (a lot of JA's) from my car, CW
mobile, in the mornings on the way to work. Sometimes I continue a QSO
with the same station on a subsequent day.
There are a LOT of different kinds of folks out there on HF. Too
bad you threw in the towel so long ago. Take another look, especially
on CW. Lots of ragchewing going on all the time.
I too cannot see how the Internet could ever replace ham radio for
me. I have been using the Internet for over 14 years now, since long
before it became commercialized. Direct person-to-person operating on
HF is a completely different thing than "using the Internet". The
former relies on operator skill and technical curiosity and interest,
and the latter is merely another communications and information
gathering tool, with none of the magic of radio. Apples and Oranges.

> know what others have learned), I'd sure welcome them.....

I've done three of these. The manual proceedure is about as good as it gets. A couple of comments: Mark or lable the wires carefully, the insulation colors are typically pretty faded. When replacing caps and other leeded components I like to use the following proceedure:

Cut the leads of the old cap close to the body of the component. Twist tight pigtails in the leads of the replacement cap by wrapping around a stiff piece of wire about 0.040" diameter. Holding this mandrill in a pinvise is a good deal. Then slide the coils over the old leads and solder. This is not only fast, but eliminates the damage you're almost surely going to do while excavating the old solder joint. This is also a blessing in confined spaces.

Hope this helps!

least.

Wow!! James, you've got expensive tastes!! After 35 years of hamming, I
recently moderated my tightwad ways and spent $2K on what I thought was a
top of the line rig. Now you break my heart and tell me I'm at entry level!

> I'm using a computer power supply to run my QRP rig...the 12 volt
connection is rated at 10
>amps...I paid 15 bucks for it new at the local computer shop

Hmmm... You say it costs $2000 to $10000 to get equipped in the ham world,
but at the same time you're having fun with an inexpensive QRP setup. Make
up your mind--which is it??

Personally, I'm amazed at how cheap ham stuff is, especially since it
doesn't have the mass market of computers or stereo equipment.

I could get a rig that covers 160 thru 2 meters running SSB, CW (keyer built
in), FM, AM, general coverage, very compact ... for about $800 used or maybe
$1100 new. Try that in 1965 or 1970.

But if I were just entering ham radio, I probably wouldn't spend that much.
I'd get a pretty nice rig for <$500 have plenty of fun with it. I recently
sold my wonderful Corsair for $350 after 10 years of great performance so I
could buy that dream rig (entry level to you).

I think it's a non-issue. nothing can be done to change it so why stress? I'm sure a lot of people felt that reading books by candle-light lost it's "character" when Edison came along. But who cares? I sure don't. My HT is still right where I put it last night...the internet didn't make it disappear. I don't love radio because it's radio, I love radio because it's the best way we know of to communicate wirelessly. If I came across some other new-fangled method of getting the job done, I'd sell my radios as fast as I could before other people find out about it - in other words, radio is a means to an end.

God, I can't think of anything more boring than "collecting contacts". I have
no idea why hams are generally considered boring people....Maybe that's why
peope do DXpeditions, they're tired of collecting contacts so they just get up
and GO somewhere (and they take their radio too).

But in many cases the phones do go out - and what good is a computer, modem, and internet then?

> Being ready for an emergency doesn't require electronics experts, it requires
> emergency procedures and alternatives.

As long as everything is working acording to plan. If you're not an electronics expert then what do you do when something goes wrong? Wait until the local Radio Shack store reopens I guess. What you need is emergency proceedures and alternative PLUS some electronics expertise.

> Again, the knowledge needed in an emergency is operational and only rarely
> might electronics knowledge be a needed skill.

and only rarely is any emergency equipment needed in the first place but that does not mean we should not concern ourselves with emergency planning. The bottom line is that the ham with an HF rig, some sort of emergency power and enough electronics savvy to put it all together and make it work will be the best prepared for emergencies. The people with only computers and cell phones will be unable to communicate with anyone. Even VHF will be very limited without the supporting repeaters.

> But there are auto experts that I wouldn't ever let drive any of my cars...even
> in an emergency :-)

But, if during an emergency your car won't start I'll bet you'd be glad to have him around :-)

By the way, the discussion on this thread takes place on a regular basis in a government agency I work with. The higher-ups are always wondering why, when we have cell phones and a computer network, do we need to be spending money on a radio system - especially an "antiquated" HF radio system. Funny thing - nearly every time a hurricane hits they all all communicating via HF radio because its the only thing that still works. Another funny thing - they always need that electronics technician to string an antenna somewhere, decide which frequency to use, and get everything up and running for them.

Lucky for the sailors aboard our merchant ships, the FCC disagrees with
you. In the past, to get a job as a shipboard RO, one had to pass a
rigorous exam testing the student's electronics expertise.

Whether it be the maritime or amateur service, segregating operating
and electronics knowledge should not be encouraged.

I think the internet is like a
huge library, not a means to
the end. It is a tool just
like that rig you fire up at
night. We listen, learn, and
do just as our forefathers
have done throughout the ages.
Nothing is dead until we are.
Life is a journey and we all
want to learn until were gone.

No... $2000.00 is "entry level" when compared to a brand-new /\/\otorola
MICOM-2R ruggedized, milspec HF set with ALE
(Automatic Link Establishment), at $6500.00+ :-)

But then again, the MICOM-2R is fully type accepted for commercial use
and doesn't have to be "modified for out of band operation" ...

1.6-30 MHz in 10Hz steps, fully tunable for frequency from the
front-panel
Full DSP on transmit and receive, four selectable filters for both
transmit
and receive 2.4 KHz, 3.0 KHz, 500 Hz CW filter centered on 900 Hz, and
a 500 Hz low-speed data filter centered on 1800 Hz, digital
noise-blanker,
and digital syllabic squelch. The set is fully ARQ capable with a
dedicated
remote connector for a TNC..

Top of the line ham gear like the ICOM's with spectrum display can
also run about the same amount... $6000.00+

After reading the postings here on the "Internet vs Ham radio", I am
wondering why this issue is defined as "either/or". Ham radio and
the Internet are different animals and they both have their place.

I think that viewing communications as a tool kit of various
methods is better than getting into heated discussions as to
whether "The Internet is 'better' than ham radio" or vice-versa..

For example, I was part of a FEMA sponsored emergency exercise
here in the Silicon Valley area a few weeks ago and our San Jose
RACES unit was a major component of this exercise. Our operators
(including myself) were tasked with the job of shadowing the
exercise evaluators and observers and providing a comms network
so they could all communicate with one another.

Just because I was "RACES", did not prevent me from handing out
City-issue
handie-talkies that are on our City Channels, nor did it prevent me
from using either my City-issue Cellphone or my own cellphone in
order to get messages through to others.

Just like in "The Real Thing", you use all communications means
at hand and not limit yourself just to ham radio. In fact,
our State Office of Emergency Services considers "ham radio"
as part of a larger-scope context called the "Auxiliary Radio
Service" (ACS), and pools all of the resources of many types
of services together. They all have their place whether it is
ham radio, Internet, National Guard, State Military Reserve,
Red Cross, Civil Air Patrol, ARES, RACES, MARS. Caltrans, or other
services..

FWIW, just my $.02...

It's only a matter of "Thinking outside the box" :-)

Not at all trying to be a wiseass - the one I had was as stable as my
R-388. Except for the prod det mod, these sound more like restoration
issues, not jazz-ups. Increasing the RF gain would seem to be mainly a
route to higher noise - are you certain it is already up to original
sensitivity (which was not earth-shaking by today's standards, but
appropriate for its s/n ratio)?

You mean, it's too bad he didn't run unlawful power or flout other regs only while getting DXCC endorsements or busting pileups in League sponsored contests.
It was the League, after all, that first devised the "Don't ask, don't tell" policy.

The rules, of course, are different for the rest of the saps who don't need to feed their yagis with 7/8" heliax.

We certainly owe the League a deep debt of gratitude for taking a leadership role in promoting ethical operating practices, without which the bands surely would have been full of jammers, users of foul language, and other lids who learned by example.

1304. AWA QSO Party

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <709102$24b@news.Hawaii.Edu>
Source record: 96633

Just received this on the GlowBugs e-list // Jeff KH2PZ

BACKGROUND
This is a quote from the AWA Old Timers's Bulletin,
volume 39, no.3, for August 1998. from page 30:

"An Inexpensive Way to Build a 1929 Transmitter"
by Bob Raide, W2ZM

"Back in the late 1960s, Bruce Kelley initiated the
1929 QSO Party especially for the old timers of the AWA. These
members would revisit their early days of amateur radio. They
constructed low-power self-excited transmitters such as the one
Bruce Kelley first built in 1929-a single 201A in a Hartley circuit.
Bruce would then schedule a Saturday night in late fall for 80
meter operation. They would exchange signal reports and equipment
information while renewing old friendships. It was an annual affair.
With "new" old-timers entering the picture it has grown ever since,
and is now expanded to two weekends!"

DETAILS
Full details will appear in the November Old Timer's Bulletin.

DATES November 28,29 and December 5-6

TIMES 6pm Saturday to 6pm Sunday (I assume this is Eastern Standard Time)

FREQUENCIES 3560 to 3580kHz

EQUIPMENT self-excited CW transmitter operating in the 80 meter band only.
This can be more than 1 tube. Power limited to 10 watts or less
DC input. Crystal control not allowed! Hartley, TPTGs, etc.
are most popular. I think the requirement is that the tube/tubes
used in the xmtr. be those available tot he 1929 amateur.

OPERATING Members call "AWA" instead of "CQ" and try to work as many other
old time stations. I don't know about scoring, but contacts with
non-members *do* count. This is a great opportunity to hear some
of those historic rigs on the air.

Ten meters has been very good during daylight hours this week. This the best band, IMHO, for AM operation, as low power and average antennas will yield great results! I had a very good QSO while mobiling home from work today, and am looking forward to the weekend with more antenna and rf out.

Check for activity from 29.0 MHz and up.

>contests.

Pile-ups are an established form of communication on the maritime HF bands. Every six hours of the day, at 0000, 0600, 1200, and 1800Z, each and every ship at sea world-wide collects WX data and passes it to any shore station within range. While working at NMO I'd have two receivers scanning the calling bands (for example, 8 MHz in my left headphone, and 12 MHz in my right). If our CQ tape was running at any of the WX OBS hours the pile-up would make any ham DX station faint. Imagine every ship in the Pacific calling just one station (me at NMO) with this time-sensitive data. The technique is to catch one at a time, take his working frequency, and give him a number ("UR NR 17"); after lining up say, 30 ships, I'd take their WX one at a time. After working all 30 ships, I'd turn on the CQ tape again, and both headphones would be flooded with more ships.

A world-wide pile-up every six hours - and the ARRL had nothing to do with it.

(The CQ tape was a tape loop which keyed our 10 kW HF transmitters with the message CQ CQ CQ DE NMO NMO NMO QRU IMI AMVER OBS QSS 4 6 8 12 16 22 MHZ AR - sending that during the OBS hours was like attracting flies with honey.)

>It was the League, after all, that first devised the "Don't ask, don't tell"
>policy.

You might want to explain that a bit further; state the exact policy you're referring to and the date it was implemented.

>We certainly owe the League a deep debt of gratitude for taking a leadership
>role in promoting ethical operating practices,

You're correct; almost every League publication I own instructs us in gentlemanly operating practices. In the early issues of QST even The Old Man himself scolded hams for their bad on-air behavior. But all our League can do is instruct through the written word - they can't enforce.

>without which the bands surely
>would have been full of jammers, users of foul language, and other lids who
>learned by example.

Again, all the League can do is instruct - they can't enforce. On-air
behavior today just reflects society's behavior in general. Bad manners
breed bad manner. For example, your bitterness toward the League will
be picked up by a new ham with no knowledge of our history nor the
League's history, and he'll begin to bad-mouth the League only because
he read you doing so, just as you're doing because you read of someone
else doing so. You're one in a long line of dominos, being pushed by
the one ahead, falling on the one behind.

Enjoy the weekend,
Jeff KH2PZ / KH6

HAMFEST October 25, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 25, 1998

LINDENHURST, LI - NY

On October 25, 1998 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reserations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam seesion. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Let me say that there has been some misunderstanding. I have been sent many many e-mails from folks who have had good delaings with William Lockwood.

Apparently he was away on vacation, and there was a misunderstanding with the banks on my part. If I kept better records I could explain what happened, but it looks like the first money order he sent was cashed by someone - either me or someone who got hold of it.

I chatted with Mr Lockwood this evening, and he explained that the first money order had been cashed and that is why the bank stopped payment on the second one. I don't know for sure but I don't think I ever got the first one. However, I do NOT think Mr. Lockwood did anything wrong nor would he.

If I have in any way cast any shadow on his reputation by my remarks I apologize to him. It is not worth $35 to me if there is any doubt that the mistake could have occurred somewhere else in the process. If I cashed the first money order, then I don't remember doing so, nor do I have any record of it, but it could have happened. I can tell an honorable man when I talk to one, and especially when so many other people write to attest to his good character.

Message-ID: <19981017211906.15124.00002389@ng40.aol.com>
Source record: 96509

Today was another great day on 10m A.M.! The band opened just after sunrise, and was in good shape until local sunset. Using a R-599/ T-599 Kenwood set, and about 20w, I worked Maine, New Jersey, Pennsylvania, and VK2BA, in Megan, Australia. Many others were heard and enjoyably copied, tho' not worked.

One of the nicest things about A.M. on 10m is the amount of space available. Few SSB ops come up this far in the band, so there is not same competition and QRM found on the lower frequencies. There are, unfortunately, a few unlicensed stations drawn, I suppose, by the carriers. Some will try to engage, but following the standard proceedure of ignoring them seems to bring quiet.

A note for curiosity, I heard a station today using a Heath Tenner(LunchBox)! Even the super-genny rx can work in the relative isolation of 29.000MHz..

Hope this is motivation for YOU to join in on the fun!

K&#65533;MB

News Xpress Version 2.0 Beta #2
Written by W.L. Ken, Ng <kenng@HongKong.Super.NET>

Overview

News Xpress(NX) is a Windows Sockets compliant USENET newsreader for Microsoft Windows that uses the NNTP to access newsgroups and articles on a news server.

Some of the key features of NX are:
- support threads; in addition, it is also able to pack multipart articles automatically
- support cross-posted articles management
- support killfile; accept regular expression for specifying patterns
- support local folders, and outbox
- support CC-by-mail and Copy-self
- built-in UUencode, UUdecode, and Base64
- built-in JPEG viewer
- MIME-conformant, support Quoted-Printable
- launching URL automatically
- remote find articles by Subject and Keywords
- allow user to rebind keys

Major bug fixes

- GPF while threading multipart articles
- multiple selection doesn't work under typical machines
- Cut-n-Paste doesn't work properly under WinNT 4.0B2
- Incorrect Unread and Total #s

Known Problems

- GPF while decoding corrupted JPEG files, uncheck View Inline Image

option in the Article tab of Options dialog box if stability is critical
to you
- Bad user support and documentation!!!

Unsupport Features in 1.0

- does not support multibyte character sets, e.g. BIG5, and SJIS
- does not support automatic NewJIS to SJIS code conversion
- does not support Undo in custom edit control
- spell checker may not work as NX no longer uses Windows edit control

---
Acknowledgement

I wish to to express my appreciation for all the people who participated
in the extensive NX alpha and beta test program, who have contributed a
great deal to the user-friendliness, and robustness of NX.

Special thanks to
Michael Denny, Brian Smither, Dong-Ick Lee, Luu Tran, Conrad Sabatier,
Ivan Hyslop, Malcolm Hoar

Thank you to all that responded. I have noticed that in many cases 90 to 100% of the responses come direct to me rather than the group. In this case 100% of the answers came direct to me. That is an interesting commentary on these discussion groups. I'll admit doing the same. Avoids problems.

Well anyway, for anyone who still shoots these old beasts, it was the .001 1000v cap across the primary of the hv transformer. It did not allow the oscillator to chop or create the ac for the hv transformer.

Once again, thanks to all that responded.

1339. AM OPS: FCC Declares Emergency (again!)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-18 00:00:00 UTC
From: bry@NOSPAM.mnsinc.com
Message-ID: <3629d3c5.54409127@news.clark.net>
Source record: 96518

Here is my letter to KB8RZZ, and to some of the ARRL's Directors and Emergency Co-ordinators today:

Dear sir,

Thank you for this e-mail. Gentlemen, I certainly see the value of emergency communications nets.

OK, but please advise these people that they are choosing the AM window for their net and that that is not a good idea. This is the same set of 40m frequencies they chose a few weeks ago during the Classic Exchange, again for an emergency net, in Louisiana.

There seems to be a co-ordinated effort across the sunbelt to choose these same frequencies now!

Is it now normal ARRL policy to regularly get FCC to declare the AM window off-limits? I am curious. Hundreds of other AM operators are curious too.

Is it your intention at ARRL and FCC to take these frequencies any time there is an emergency? This seems to be a new thing.

May I suggest that you please ask these emergency nets to use some less occupied set of frequencies such as 7270 and 7285 kHz for their net!

It seems to me that if you are going to continue this practice that we shall be forced to relocate the AM window to another section of the 40m band. Perhaps it is time for AM operators to document the services rendered to the community and to amateur radio in general by their use of the these frequencies.

If the next emergency declaration includes 14286 kHz I will not be surprised!

Comments please! Let me know your response.

Thank you,

Brian Carling, AF4K / G3XLQ

SB QST ARL ARLB085
ARLB085 FCC VOLUNTARY COMMUNICATIONS EMERGENCY DECLARED

The FCC has issued a communications emergency at the request of
South Texas SM, N5NAV due to severe thunderstorms and flash
flooding. ALL AMATEURS ARE REQUESTED TO COOPERATE BY RECOGNIZING
THE EXISTENCE OF A VOLUNTARY COMMUNICATIONS EMERGENCY AND
THEREFORE RELINQUISHING THE USE OF FREQUENCIES 7285 KHZ
(EMERGENCIES) AND 7290 KHZ (HEALTH AND WELFARE) DURING THE DAY
AND 3873 KHZ (EMERGENCIES) AND 3935 KHZ (HEALTH AND WELFARE)
DURING THE EVENING HOURS. THE FREQUENCIES ARE TO BE CLEARED
WITHIN 3 KHZ EITHER SIDE OF EACH FREQUENCY.

THE COMMUNICATIONS EMERGENCY REMAINS IN EFFECT UNTIL RESCINDED.

Does anyone know how to contact Paul, KF4FOR?

I tried e-mailing him at his last known address and it bounced.

He had been asking about RACAL receivers and we had a TON of
good responses with many details about the radios he wanted to
know about, but it was on the DCBOATANCHORS list and he is not
currently subscribed!

Details at:
http://www.mnsinc.com/bry/dcba.htm

Of course it's a coordinated effort Bry. It's the same thing with the liberals spraying mind altering chemicals on your fruit when they stand behind you in the checkout line. Or where the environmentalists have developed mutant trees trained as assassins. (Kennedy and Bono.)

They pick the emergency net frequencies to be near the band edge to avoid the kind of interferance problems they would have by putting it in the middle of the band. 7.255 MHz comes to mind... The AM net ended up near the top end of the band for similar reasons.

73 es GM from Jeff
(See below for Bry's and the ARRL's related bits.)

How about listing this as "FA", or "FA on eBay", so we don't have to
waste our time reading an ad which leads us to believe we can actually
buy it (For Sale), rather than *bid* on it (For Auction)?

Thanks,

Hello All,
a new shareware product to manage collections, catalogues
and organize your personal information has just been released.
Information Explorer highlights are:
- Window Explorer like interface
- Ability to define your own collection/catalogue types
- Mage multiple collection/catalogues types
- Item organization in areas of interest
- Support for picture
- Advanced queries
- Unlimited number of notes for each data item
- Report writer
- Web publisher
- Import / export to-from comma delimited files and Windows Word
- Desktop shortcuts
- many more ...
IE ships with templates for coins and stamps collectors; for
cataloguing books and movies libraries; for storing addresses.
For more information or a free trial version please visit our Web
site www.AddressExplorer.com or mail sales@addressexplorer.com
Important Note: we can not be expert in all the possible areas;
if you define a new data book for collecting sport cards or dolls
or publish a real estate catalogue on the Web or ... send it to
us; any published data book will be awarded a free copy of IE.

Brian Carling wrote:
>
> You can find access to all of the Ham Radio Auction sites on the web >
> Most of them are free. Why pay at eBay??

Because:
Search by Keyword "radio"--

U-Auction-It Nine (9) entries, seven of which have no bids.

KD5ABQ: Four (4) items, three of which have no bids.

Bob Duckworth's: One (1) item, which does have a bid.

Ebay: 26 PAGES of 50 items each, of which 70% will sell.

Bry, I don't want to denegrate anyone's service to the community
when trying to produce an auction site. But people just
don't want the "free" auctions. It's not "my opinion"-
It's a demonstrated fact. Just read the numbers.
Free sites cannot endure, because
there will come a day when people get tired of working
for no return. It's human nature. I just hate to see
people go to so much time and effort for so little appreciation.
It's always tough to argue with success.
And Ebay, for good or ill, is a huge success.
Someone said "you get what you pay for."
He was wise.

Hello all,

I'm in need of some of the speaker connector "spacers" that are on the back apron of the SX-28. These are bakelite parts that are in two pieces, used to isolate the push connectors from the chassis. They're a long oval in shape and accomodate two binding posts. I think they were originally made by James Millen.

Anyone got some of these to sell??

thanks,

Joe KC6TXU

Can we all spell "marketing"?

You wouldn't want to set up an empty store front on a deserted street.
Potential customers are always "driving by" the eBay store front!

Perhaps we should pick our battles with a bit more care. How often do hams actually get involved in emergency communications these days? And does a few days of emergency or health and welfare traffic actually make that much difference in the grand scheme of things. If anything, you'd think that the AM folks would seize upon the opportunity to provide some good old fashioned operator expertise instead of taking up a turf war. I cannot say that the SM in Texas picked the AM windows to zing the AM folks. Perhaps he knew that the AM folks were more civilized than the herds of jerks that populate the rest of 40 and 80 meters. Just a thought.

I would find it quite difficult to talk on the internet with the four or five other people I talk to on a regular basis going to and from work. I would have found it VERY diffcult calling on the internet to be evacuated from my flooded home March 1 of last year when my phone did not work. I would also have found it quite difficult calling the police over the internet to a motor vehicle accident I was involved in.

Your arguments against ham radio can be offset by many other people's arguments for. It is a moot point - each has a viable place in our society. If you wish to spend your time on the internet, please do so. I enjoy each in it's own time!

Yes - radio onboard aircraft at that time required - BOTH - "Type Acceptance" from the FCC and "Type Certification" from the CAA (pre-FAA) for airworthiness.

There was (and still is) an understanding between the U.S. military and the major air-carriers that in case of a national emergency or in time of war, aircraft and crews would be turned over to military authorities for secondary transportation use. As part of this agreement, a small percentage of the carrier's fleet would have equipment needed to support possible military missions.

At the time, many International air-carriers required a radio op to have a FCC radiotelegraph license since long distance hf voice communications was unreliable over international waters. Aviation radiotelegraph service even had it's own "Q" signals.

QFO? QGV? or QHZ? C? K

A friend of mine told me that the ART13's and BC-348's (ARC 8 Set) were
used well into the 60's for trans atlantic aircraft as flight comms in
Europe were still in the 200 to 600 kc range. After WWII the US and
Canada switched to HF/VHF but (at that time) war torn europe lagged
behind. I bet that pix of the ART13 shows the low frequency tuner in
it!

1384. Re: Comml airlines use of mil BA gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-19 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <17388-362C07F7-77@newsd-161.iap.bryant.webtv.net>
Source record: 96410

1950 - the working freq for ALL aircraft flying over international water was 457 Kc by International treaty. CW was primarily used.

Continental airspace used 3.117 Kc nationwide and control towers were usually 3.023 Kc or there abouts...

Emergency AM comms used the maritime mobile freq of 2.182 Kc. 500 Kc could also be used for AM or CW. 121.5 Mc was used only within the continent.

RF power output was supposedly limited to 125 Watts for CW, MCW and AM. Again, by treaty.

This was the way things were until mid 50's when VHF radio started to filter down to most airports. 457 Kc AM was still used up to the early-60's by them, most of the traffic shifted to AM HF. By mid 70's, it shifted from HF AM to HF USB.

Today - most large International A/C use satellites for communications and navigation duty but occasionally you hear a WDHAI type message on HF.

The ICAO still has authority to set and control aircraft communications. Like most government bodies, they tend to be rather conservative when it comes to technology... and rightly so..

Bill:

My Solution: I'll just QSY into the SSB freq.'s I'm sure all the other SSB ops will understand our desire to comply with the FCC. ;) At least it should work on 75M.

And speaking of 75M, if I were a conspiracy nut I might suspect something sinister in the coincidence of 3873 being specified. Nowhere near a band edge and right next to the west coast AM calling freq. for the past 30-40 years of 3870, (also, coincidentally, routinely QRM'd by several Texas SSB ops.) Sadly, I'm not a conspiracy nut, so it never even occurred to me.

Meanwhile, I'll abide by the FCC request and sincerely hope the flood victims in Texas survive with minimal damage to their homes and property.

Hello
Your right 10 has opened !!! I thought that this would be the fall for
10meters....
Using in this end a Globe Champion and a GPR90 with a mono band quad.. have
other gear too...Interested in finding a real nice clean good working Johnson
Ranger or Ranger II

73 and c/u on 10 am

This is a nice radio that works well and would be great for a Beginner or the occasional Shortwave Radio Listener. These old tube type radios("In my opinion")
work better than anything that Radio shack sells,minus the digital readout.

1405. WTB:DRAKE TR4C FOR PARTS TO RESTORE MINE

Restoring
Need the veneer tuning, Mine main tuning knob jumps around a bit. The plastic has warped from the hell heat the TR4c puts out.
Any condition of the body and such but I would like a flawless action of the main frequency indicator tuning knob and I would like to replace the face plate.
Notch filter a plus and the other 10 meter bands crystals would be great.

Thanks
Ken

Wow, that's a shame. Like you, I packed my gear away in the late 80s, although for different reasons (marriage+kids+school+job=no time). Just recently, when we moved, I thumbed through my old logbooks; comments like "great ragchew," notes about the person's family, interests, etc. abounded. I remembered friends like Ira WA1W (no kidding) and Jim (N1DDU) who were good friends made through ham radio.

In fact, about half of my log entries contain some personal notation about the other ham, indicating that I had acheived some reasonable level of communication with them.

Thankfully, having moved, I threw up a sloper, pulled the gear out of the attic, and am active again on HF.

It is interesting that I so much missed in ham radio what you claim to have never experienced.

Avery

1413. Hallicrafters S-29 ????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-19 00:00:00 UTC
From: dan harlan <dharlan@ameritech.net>
Message-ID: <362B50E2.3F34@ameritech.net>
Source record: 96481

Greetings All,

I have an S-29 that I'd like to use and was wondering
about the metal case being used on an AC/DC set like this. The
chassis is isolated from the case by insulated screws and the
only connection from chassis to case is via a 1.0 uF cap.
Still seems somewhat risky to me. I have kids! Back to back
filiment xfmrs and a 3 wire cord seems logical but I'm wondering
what other users would do, or if there is a real slick trick
that the old timers used?

I'm also curious about the value of an S-29. Moore's
book say 10,000 made during WWII but after seeing dozens of
TO's over the years I cant recall ever seeing one of these,
How's come???

The thing is pretty nice, cute as a new puppy, It's
sort of a portable SX-28 in black wrinkle. a BA'ers dream!

Thanks

Dan dharlan@ameritech.net

Dan, I would replace the cap with a .05u 630V plastic film shunted with a 100K ohm 1/2W metal film resistor. Also do a leakage test from line to case to ensure there is no short or leaking from case to line. If all is well then, there is no problem with using it.

Neil S.

1416. Tube Rig Parts & Info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-19 00:00:00 UTC
From: Dennis Boyle <chimera1@mail.idt.net>
Message-ID: <362BA113.149C@mail.idt.net>
Source record: 96484

I spend all my time restoring or building audio equipment. In a museum auction I bought a 1000 Watt "Something". It is one of the finest example of tube construction I have ever seen. It is labeled 1000 W Amp mfg by W5EDW. It uses a pair of 810 tubes. This rack mount beauty is the only piece of this rig the museum had. I am not smart enough to even know what's missing. Certainly the power supply and whatever drove or modulated it.

Does anybody have any idea of what this is, maybe a schematic from an old Radio Amateur Handbook. I have a lot of old vintage parts, transformers and tubes, that I could use to construct the missing pieces. I have no plans to use it but the level of love and quality that went into its creation deserves to be saved. I would be happy to swap vintage transmitting parts, transformers and tubes for help with this project, I
have quite a bit in inventory. Any suggestions or ideas you can offer would be greatly appreciated.

Sorry for any breaches of etiquette, this is the first message I have ever posted.

Best Regards,

Dennis Boyle, chimera1@mail.idt.net

Of course it's not dying. I hear just as many or more people on the bands as I ever did. Ever try to find a clear spot on 75m for a 1 on 1 qso? Not too easy. No room hardly. Dead? not hardly. Same can be said for 20m and others. Listen to ten meters when it gets opened up. Dead? not hardly. VHF/UHF dead? not hardly... Whoever says ham radio is dying needs a new stethoscope. MK

1422. SX-28 For Sale - Not on E-bay ;^)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-19 00:00:00 UTC
From: bcotter@pop.uky.edu
Message-ID: <70g555$l11$1@service3.uky.edu>
Source record: 96490

Hello SX-28 enthusiasts,

I have for sale, whole or in part(s), a Hallicrafters SX-28 receiver that is reasonably complete and in fair condition. Discovering that the power transformer is shorted, I have decided that this project is beyond my capability to restore or repair. Therefore, I am prepared to sell this receiver complete as is or in parts, if there is need for such.

The hinged-top case is solid with no dents, dings or deep scratches. It has the original aluminum deco trim "wings" in very good condition. The case will require light sanding and painting.

The chassis is dirty, there are some minor rust spots and the aluminum cans have a light oxide coating. One of the six IF transformer cans appears to be a replacement. The inside of the shielded tuning capacitor housing is relatively clean and intact. The dial gear and string mechanisms work and the band switch position indicator are functional. All tubes are included but untested.

The underside of the chassis is clean, but the cloth covered wiring is showing it's age. There are about a dozen "fresh" solder joints where repairs have been made in the past. Two pots have been replaced and possibly the AVC switch. None of the wax capacitors have been replaced, nor have the early tubular resistors. The power supply filters have been replaced with aluminum can electrolytics. All the coils, trimmer capacitors and band switch components are intact. The remaining front panel switches and controls appear to function normally.

The front panel has minor rusting along the edges and around the rack mounting holes. All knobs and skirts (except avc) are original and in good condition. The S-meter works and has a small (1/8") stress crack at the top of the face. The main tuning and bandspread dials and bezels are in nice condition.

Please let me know if you are interested in this receiver as a whole, parts or assemblies. Will sell with or without cabinet.

Thanks es 73 Bill N4ALG

From: gkaufman@bu.edu
Message-ID: <362ba39d.1053787114@news.bu.edu>
Source record: 96493

I have an R390A I'd like to sell - or perhaps more correctly,
that my wife would like me to sell. For some silly reason she feels
that one R390 and one R390A are enough in our living room.

It's a fairly reasonable radio that I've enjoyed listening to
for the past few months. I just ran into a very clean EAC and am
"trading up".

It is an Amelco, with almost all Amelco or Teledyne modules.
Tube (26Z5) rectifiers, Motorola PTO.

Cosmetic condition is average. Both meters are present, as
is the ID plate. No covers, rf cover or line cord cover. A few tube
shields are missing. The RF deck is clean. I have replaced the
corrosive cap on the Audio deck, and recapped most of the IF deck. As
far as I can tell it works nicely, except for a few minor problems I
haven't gotten around to addressing - carrier meter doesn't adjust
well and the dial lock doesn't work. I can send along .jpg pictures
of the radio to anyone interested.

I'd like to get $325 for the radio, or best offer if no one
wants it at that price. I have a very nice wooden shipping crate that
I'd be glad to use as long as the buyer leaves me a depost to ensure
that I get it back. Obviously a local sale would be a big plus (I'm in
the Boston area).

Many thanks for reading this,

- Gary

My United Airlines Boeing Stratocruiser flight manual dated 1950 shows a very clear photo of the radio operators position: BC 348, ART 13, MN 62 (same as ARN 7 ADF), ARC 1 and some others. Were these military radios FCC type accepted for commercial use or were there no such requirements back in 1950? Also shown is a Collins 18S1 AM HF rig sharing the rack with the war surplus gear.

1428. Help with Icom 725

Hello,

I have an Icom IC725 which has developed a problem I have not seen before. There is no RF output on the 40 meter band, although 18-20 amps of current is still being drawn in the key down position on 40, and when modulated in the upper or lower SSB position, the power supply shows normal voice peak current draw. 40 meter receive is perfect.

The rig functions perfectly with full output on all the other bands and in every mode on those bands. I thought it might be a problem with the bandpass filter, but I would have thought this would shut down all current being drawn from the PA.

If anyone has any thoughts I would appreciate them.

Thanks and 73
George

I don't think type acceptance came into the picture until the late 50's.
The FAA (then CAA) would have been the controlling agency anyway in 1950.

Nope, that means pretty loud for the guys here in Texas that were on the net. That doesn't mean loud all over. I don't like to repeat myself. The people I talk to are stretched all over the country. I run a signal that people don't have to strain their ears to hear. Until winter sets in 100 watts doesn't get it done. That is , IF winter sets in. It didn't happen last year. MK

I am all for moving the AM frequencies on 40M and 75M. THe digital TV cable I have puts a noisy wide signal on 7290 and around 3885kHz and wipes out listening to weak AM stations. The rest of the bands are clear.

Hi Guys;
I just came across this seperate VFO-122 with no transmitter.
It's in Good condition, not excellent, but all intact, less the tilt-bail underneight!
All knobs are original and the entire unit is not all that bad, i am just picky, i guess!
It is untested without manual for $85ppd Conus!
Thanks es 73....Rich WA2RQY (1961)

The receiver signal does not flow through the tx bandpass filter, and VSWR foldback
is sampled past the tx bandpass filter. Since no power is reaching the REF side of
the bridge, the radio is attempting to produce full output minus any ALC activity.
First, run the VFO through the BPF transition steps. 3.999-4.000 and 7.999-8.000.
Does the relay activity sound the same? Or does it only sound like one relay energizing on the faulty segment as you rock back and forth through the transition?
If not, open it up and check the steering logic to make sure L3 segment is getting
relay driver voltage. If that's ok, time to go further.
By measuring RF power at the connector P5 (where the PA looks into the bandpass
filter), you should see 40 meter power just duckie into 50 ohms. Basic continuity
checks through the L3 bandpass filter SHOULD reveal a relay failure on one end
or the other. This is a common problem in "solid state" radios.
Good luck,
Jim Warner
Warner Radio Service
good semaritan division

I supposed FEMA and rural fire districts could be labeled "pretty boring
and useless," too. ;)

Ham do a lot in between disasters: build gear, refine what they've built,
have training sessions, have picnics together, work contests to refine
their communication skills, experiment with different antennas, ragchew
with one another (which builds fellowship amongst the local gang) -
a hundred other items could be included here.

>God, I can't think of anything more boring than "collecting contacts".

With each contact we've polished our communication skills just a bit
more, tested the efficiency of our equipment, and had some fun!

Without daily contacts and weekend contests, I'd fail miserably
in handling emergency traffic at Oahu Civil Defense Agency during
our next hurricane.

>I have no idea why hams are generally considered boring people....

By whom? I have high regard for my fellow hams. People outside
ham radio probably think of us in the same manner they think
of say, coin collectors. It's not until a coin collector sits
the person down and explains the process of coin design, minting,
minute defects (which raises the value of a coin over its face
value), circulation, proof sets, et cetera, does that outsider
begin to appreciate that hobby. If folks outside ham radio
consider us boring, it's only because a ham (yourself?) hasn't
taken the time to thoroughly explain the ARS, its mission, and
its history.

1463. more info on US airline use of WW II BA gear (long)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-20 00:00:00 UTC
From: boeing377@aol.com
Message-ID: <19981020005622.10618.00002188@ng70.aol.com>
Source record: 96429

More info on commercial use of mil surplus WW II BAs on US airliners:

Further reading of the 1950 United Airlines Boeing Stratocruiser flight manual shows the following:

ART 13 xmtr also called a 17 H2 (never saw that designation before). The photo shows a non LF ART 13 (blank panel where LF osc mounts), but the flight manual refers to the BC 348Q and the ART 13 as the LF comm radios.

BC 348 Q rcvr. Here is where it gets interesting. There is a data plate just to the right of the dial lights knob that appears to read:
CAATC NO. 1091
ISSUED TO
PAN AMERICAN AIRWAYS INC
NEW YORK CITY
RADIO RECEIVER BC 348 Q

The BC 348Q is a Wells Gardner set and has the standard Signal Corps data plate to the right of the tuning knob. Below that is an embossed metal tag, unreadable, possibly a UAL property tag.

18S2 or 18S3 HF AM radio xcvr (not 18S1 as previously posted). This set is called the HF radio in the manual.

MN 61A marker beacon rcvr
AVQ 6 or AVQ 9 radar altimeter
BC 733D localizer rcvr
ARN 5A glide slope rcvr
APN 9 Loran A rcvr
MN 62A ADFs (MN 62As were often converted from surplus ARN 7s)

Looks to me as if Pan Am may have applied for and received CAA certificates for this mil surplus gear (surmised from the CAATC data plate on the BC 348Q). The mil gear looks standard except possibly the BC 348 which has a front panel screw in fuse holder located near the upper right corner of the freq dial bezel (was this standard?). UAL may have found it cheaper to buy this gear under the Pan Am certificate rather than buy newer commercial gear or obtaining their own certificates. Or maybe thery realized as we do, that the quality/value of the mil BA gear was probably better than most commercial gear at the time.

Remember those ads in CQ in the 50s offering BIG money for BC 348s ARN 7s and ART 13s. Could they have been seeking sets for installation in commercial US airliners?

Just think, on a dark foggy night in the 1950s, your parents (or maybe you) may have been trusting your life to a BC 733 localizer reciever and an R 89B ARN 5A glide path receiver as your United Airlines Boeing Stratocruiser approached

runway 28L at SFO on instruments inbound from Hawaii.

I was told that Pan Am used APN 9 Lorans on 707 jetliners well into the 60s.

Surely someone on this board can shed more light on this subject of US airline use of mil surplus avionics. Lets hear from some old time airline pilots or radio ops.

Conversation is what you make it. If you didn't like the topic, you can change it can't you? People talk about radio's because thats usually the first thing that comes up. I've never had any trouble changing the subject. The part about talking to foreigners I don't understand. I don't talk to them any different than I do stateside. I've never viewed dx stations as cb'ers or children. Just another station as far as I'm concerned. I've spent hours ragchewing with dx. Ever try 160 m? Plenty of interesting conversation on that band. If you hear hams using banal conversation , maybe you should jump in and debanalise it. MK

Avery OM,

I could not agree more. Every day, twice a day, I am on the air for 30-45 minutes, morning and evening, on my way to/from work. 40M CW mostly. Almost every day I have a great QSO with someone, and we cover all kinds of ground from family, QTH's, antennas, rigs, weather, bio's, you name it.
This morning on 40CW I got a call from an old friend from 18 years back. We both flew the same kind of airplane (Mooney M18 Mite) years ago, so we had a lot to talk about. Just one example.
There are LOTS of FB ops out there, at least on CW. I can't provide any info re: phone, since I am not a phone man.

73 and Enjoy,
Don, W6JL

I hope you have the horsepower to keep up with me. Any one that hops on
top of me can expect to have their hair blown back after a few minutes.
>
> And speaking of 75M, if I were a conspiracy nut I might suspect something sinister in
> the coincidence of 3873 being specified. Nowhere near a band edge and right next to
> the west coast AM calling freq. for the past 30-40 years of 3870, (also,
> coincidentally, routinely QRM'd by several Texas SSB ops.)
I had thought for a long time that 3880 was supposed to be the calling
freq for am. Also 3870 has been used for years as a ssb freq. I guess it
depends who is there first doesn't it? As I've stated no one owns a
frequency. As one of SSB'ers regularly on 3870 we have no wish to clash
with the am's. In fact most have such puny signals they are hardly
noticed. But on most all nights , we , the ssb'ers were there first. We
get on early in the evening and stay until very late at night. So smile
when you say qrm. My henry is only at half power most of the time.
AM,ssb,cw no matter, it's who on the freq first that has the use of it.
ALL others that hop on later are the qrm. If you don't want to be qrm,
maybe you should get on sooner. As a note about the storm net on 3873
last night, we had a guy come down and request us to lower power as he
said we were (splattering) quote, their net. #1 I NEVER splatter. I'm
very carefull about that. But to be a good boy , I gladly reduced to 110
watts. And on 75 I'm still pretty loud with 110 watts. But I feel I did
my part to try to keep things on a smooth and even keel. I can see that
the wx net could be quite important. But I never try to qrm people. I
can run legal limit on 75m no problemo, but I usually run on low tap
with about 700 watts.
The only time I run pedal to the metal is on a loud qrn night with heavy
static. You AM guys need to understand that you don't own a freq any
more than we do. So we all have to try and coexist. MK

Hi Boeing377:

I flew in a Soviet helicopter in the Arctic in the early spring of
1991 which had, onboard, an exact copy of a BC348. I used this rig,
along with the radio operator's homebrew electronic keyer, on HF CW
while we were transiting the islands of the Frans Josef Land archipelago
at 83 deg North Latitude. The BC348 had all Russian front panel
markings naturally. The Russian radio operator was, of course, a ham,
so even with zero common spoken language I was invited to sit down at
the small operating position and get on the air!
This rig was used as the sole means of radio communications, there
being no VHF comm or nav enroute in that region. Incidentally,
navigation was done by visual dead reckoning of known islands in the
group. We flew in very limited visibility at 100 meters altitide at an
exact IAS of 100kts. This was done to facilitate the navigator's use of
his stopwatch and known elapsed times to transit between known
landmarks. This was in near-whiteout conditions; not for the faint of
heart! The navigator sat in the lower front of the helicopter which was
a huge section of clear plexiglas windows allowing terrific visibility
out the front and to the sides.
I also visited a very remote weather station on Rudolfo Island (the
northernmost island in the group), which had a radio setup right out of
the 1930's, all like new and completely functional and used every day on
HF CW. This was part of the adventures we had as part of the 4K2FJL
DXpedition to Heyss Island, Frans Josef Land, in April 1991.

That's really not fair.
Most hams are not lazy; they simply don't have the
technical knowledge to comprehend digital networking,
much less "improve" it. This doesn't make them "bad"
or "lazy." Technology is simply changing far too quickly
for the average hobbiest to keep pace and it's unreasonable
to expect them to do so. I barely have time to say "wow"
before some new wonder comes down the pike, making the
last one obsolete.

The FCC tried in 1974 to open the ham bands for true
exploration and experimentation by adopting
a bandwidth-based, rather then mode-based, frequency allocation.
Any emmission would have been "kosher" as long as it met
the standard. The ARRL, short-sighted as always, talked them
out of it. Darn pity. We might actually have been able
to do something "new" and useful by now. No... we can't compete
with the young turks in multi-million dollar labs and big funding.
A few of us, like perhaps you, can hope to make some progress
in our limited fields of expertese. Don't damn everyone
else for being different from you.

1512. FS: 1 Linear Amplifiers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-21 00:00:00 UTC
From: Marv_E_Ads@Juno.com
Message-ID: <70ls9k$9gl$1@nnrp1.dejanews.com>
Source record: 96390

Hi, A friend of mine recently became a silent key and in his estate are one and a half amplifiers that may be of some interest to someone on this group.

********** The Linear
****

There is a large linear that was under construction. It.is just sort of started. Socket mounted, air system complete, nothing much wired.

The valuable parts are: A 4CX5000A (the best of 4 which he owned at one point) A 4CX10000D (which looks well used) An Eimac SK-300 socket, fairly good used condition (only a couple of the contact fingers are broken), SK-306 & SK-1306 chimneys (one for each tube) A Johnson 200-205 ribbon coil -- 15 uh looks fairly new There are two new Groth turn count dials on the front panel but, the knobs for these dials which I think I saw laying around a couple months ago, are no longer in sight and may or may not turn up.

There is an assortment of transformers mounted in the bottom of the cabinet:

A new looking filament transformer marked 7.5 V 100 Amps.
A older 8" or so cube with some diode strings on top that I suspect are for the screen. There is also a string of six 200V 50W zeners with heatsinks mounted to the side of the cabinet, obviously for the screen.
A choke for the screen supply.
And two or three more small transformers that may be for control or grid bias.

The air system has a plexiglass plenum and an apparently new dual squirrel cage fan. The fan is just hooked up with test leads.... There is a commercial manometer with its tube attached to the plenum but the manometer itself is not mounted to anything.

The cabinet is a gray 24" panel size rack type. There is a panel for the front of the amp and a latch released door for the back. There are no panels in the front below the shelf where the tube socket is mounted.. The cabinet is 44"H x 27"W x 24"D overall. It has a few scratches and blemishes as it has been rolling (on casters) around in the garage for years. It probably weighs about 150 lbs. with the above described parts.

There is no part of a plate supply evident...

********** The operating Linear **********

Dick, the silent key, acquired a commercial (AM?) transmitter a long time ago and built and rebuilt his own "daily use" amplifier in this case. It is

currently configured with a pair of 450TL's (plus at least 6 spares), in grounded grid. He used to drive it with a Heathkit SB-220 & I believe it runs about 4 KW SSB. He ran this thing for YEARS! so at least it is reliable. :-)

The nicest part is that it has:

Good coils switched by a very nice homebrew bandswitch.
Vacuum variables (300pf@10KV? and 1000pf@3KV? -- I am unsure of the voltage ratings, they may be higher),
Real input tuning
and
a (original, I presume) commercial meter bridge with 7 meters across the top.

The Power Suppy components.

A 240 volt variac (1 foot in diameter) rated perhaps 50? amps

The transformer is some kind of fairly modern (mid '70's vintage?) monster. Rumor has it that it was originally made for a shaker table amplifier. The U-I laminations (which are most of the thing) on the plate transformer measure overall 18 x 11 x 6. I would estimate that it weighs at least 300 pounds. It is likely at least 10KW CCS rated. It is open frame with some eyes at the corners for the crane to hook up to... :-)

The diode bridge is comprised of a zillion low voltage diodes in a fairly cute plexiglass housing.

There is an 8H, 1A choke made by Collins

a whole bunch of 1uf 5KV caps (12?) wired in parallel plus six 54 uf, 2500V continuous DC rated (they are actually laser caps) wired in series parallel (36 uf / 7.5 KV effective). Note: One modern capacitor would be physically smaller than one of the laser caps and be rated higher than all these put together!

There are some odds & ends like a giant power contactor, main circuit breaker, a 7 meter bridge assembly, and of course the rest of the stuff to make the 450TL's go.

The bad part is that the cabinet is navy gray, about 7' hi, about 3' wide, and 2&#65533;' deep and the whole thing likely weighs 700lbs....

****

I would like to sell both of these units together for $1500. The variac, power transformer, vacuum variables and some of the other components from the 450TL piece would go along way toward completing the other amp. You could just toss the big cabinet on the way out of town... but, please don't let the widow who helped repaint the thing 30 years ago see you do it!

I am afraid that this stuff does not easily lend itself to shipping which would certainly have to be by truck freight. A lot of the parts would have

to be removed and packed separately. The big transformer for instance is not bolted down and would have to be palletized. If you are far away, perhaps you have some friends in Los Angeles you could impose upon. :-)

Thanks for reading all of this & have a nice day!

73,
Marv WC6W 310 649 3111 (Reasonable hours Pacific Time please)

P.S. -- I expect to win the "boatanchor of the week" award for this posting!

>More info on commercial use of mil surplus WW II BAs on US airliners:
>
>snip
>
One caution on the minute details in the picture: If this shot was set up by the PR department, the equipment may be only form and fit, not functional. And, besides, what other radios were available in quantity then? Airlines were eligible to buy AN/ radios anyway for the war effort, so these may have not been "surplus" in the true sense of the word. All the radio manufacturers were switching over from wartime production, but radios were needed immediately. And, besides, for the time, those were good radios. Remember how long it took for aviation VHF-AM to reduce channel width from 100 kHz, long after state of the art produced stability allowing 20 Khz or less channelization in other VHF applications.
On PR pictures of BAs: Go to QST or CQ in 1952 and look at the first ads for the National NC-125. Count the bandswitch positions and the number of dial scales. Compare to any production radio or to later ads. The initial publicity showed a 5 band radio covering up to 54 MHz which turned out to be impractical to produce economically, but the advertising department couldn't wait for a picture of the real radio. So, seeing isn't always believing.
Hope you stir up some old aircrew radiomen. Unfortunately, the guy I knew who would have had the right answers (worked for Pan Am during and after WW2) became a silent key about 5 years ago.
73, George W5VPQ

Hallicrafters S40B In good shape, all original, all the knobs are original looks good. This one works ok, It is almost an identical receiver as the S-77A which I also have for the same price but it has poor sensitivity but in much better shape in looks. Case not as pretty on the S40B. Buy both for $120 or $69 each + shipping.

1533. SX-42 with weak FM

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-22 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <70nnjnrch1@supernews.com>
Source record: 96320
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I have a question about what voltages I should expect to read on the 7H7 tubes in my Hallicrafters SX-42. The pins in question are 2 and 3. I am taking voltage readings with my variac set to 117vac and with the radio set to FM mode as indicated in the schematic.

Currently, the 1st 7H7 tube shows around 12-13 vdc on pins 2 and 3. The 2nd 7H7 tube shows 70-80 volts on those pins. My FM reception is weak (very low volume), although the fidelity sounds decent. The radio plays loud and clear on BC.

The Sams schematic says I should have 65/65vdc on the 1st 7H7 and 200/187vdc on the 2nd one. The Hallicrafters service sheet says those voltages should be 40/40vdc and 200/180vdc, respectively. The Riders sheet does not give voltages.

My SX-42 seems to be an early model, whose wiring matches the Riders schematic. There are some differences -- including how the 7H7s are connected -- from the Sams and Hallicrafters sheets.

I have replaced all the paper capacitors in this set, and all of the resistors associated with these two tubes. The B+ voltage is normal. My 7H7 tubes are used, but both test OK on my cheesy emission-type tester. I have also cleaned the bandswitch and other switches, and confirmed with my multitester that all switches are making good contacts in FM mode, as shown on the Hallicrafters "clarified schematic."

Ideas? I suppose I could try changing the values of some resistors to bring up these voltages, but I don't like messing around with things too much. The radio presumably worked when it left the factory, right?

Thanks!

Phil

12-13 volts is way too low for the plate and screen voltages. I'd check the resistors feeding the plate and screen. These often go way up in value, especially if there's been a leaky or shorted capacitor in that area. You could also have a very very leaky capacitor hanging from that plate or screen feed. Also if you put in a new electrolytic, be sure it's put in with the right polarity! That will drop the B+ way down too. Also make sure the new resistors you put in are good and the right value. You can't go by the old colors as sometimes yellow fades to orange or vice-versa.

You could also have a very gassy tube although this is less likely. Try swapping 7H7's?

Good Luck,

George

Hello All,

I have a pretty nice National HRO 5A1 with the rack that has
the speaker, power supply and coil storage drawer. Has 4 coils A thru
D.
The MRR rack is about 2 feet high, looks like it should sit on a table.
Good cosmetic condition except for an extra switch on the rcvr.

Not needing or wanting any more single conversion rx's I
would like to sell this thing to someone who would enjoy it. It really
is a nice piece just not right for me. Not sure what its worth
but suspect the rack is pretty rare. Any offers?

Thanks

Source record: 96330
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Well, maybe I will order some new tubes (have no spares) and try swapping them in, although I did try swapping those two old 7H7s around with no change in performance. I had already replaced ALL the capacitors and resistors around these tubes, and doublechecked all values against the schematic, as well as verifying that all their connections are correct and good.

B+ voltage is normal through the rest of the radio, and it appears to be normal at the place where each of these tubes picks it up. It's puzzling.

Meanwhile, today's ray of sunlight is that I F-I-N-A-L-L-Y fixed the cussed sparking bandswitch. Its first problem was that one wafer was broken completely in half by some previous "repairman." I fixed that with JB Weld. The more difficult problem was finding the place where the phenolic had carbonized, causing arcing across contacts.

The carbonized area was INSIDE the center rotor of one switch wafer, if that makes any sense. I practically lost my mind and my eyesight peering through magnifiers to find the problem -- not to mention the hours spent in fashioning teeny-weeny scrapers to fit between the contacts in the middle of the switch, scraping out the burned stuff in the center and around one tiny rivet, and winkling glue into the empty spaces without accidentally epoxying the wrong parts together!

My reward is that, after struggling with the bandswitch over a period of weeks, today I listened to SW for the first time . . . and it sounded mighty, mighty good.

Cheers.

From: hexagon@my-dejanews.com
Message-ID: <70ofmd$1bg$1@nnrp1.dejanews.com>
Source record: 96334

Hi, I have purchased a piece of industrial equipment called a Woodwelder, it uses RF to cure plastic resin glue in seconds. The generating unit contains 2 x 866a's and 4 x 810's and is connected to a handgun and trigger mechanism. The unit has not been used for years and I purchased it as is, unseen. The unit appears to almost work, the 4 810's glow and the 2 866a's glow blue when I pull the trigger on the hand unit. The blue glow is not stable on one tube and emmits some scary flashes that caused the fuse to blow. Does this look like a problem with the rectifying tubes or should I look elsewhere? Thanks, Terry Ackland

Looking to your help again - tnx in advance!

Problem when turning the tuning knob. It has what almost feel like detents (sp?) or mechanical flat spots about every 1/3 turn. Makes it very difficult to stay on freq when within a couple of khz or so of these - the vfo just wants to slide into the hole. Can run the knob back and forth (forcefully) over these spots and finally get the vfo to stay put.
Any ideas?

Tnx and 73
Gil

1558. ETO/Alpha PA-70V Liquid Cooled Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-22 00:00:00 UTC
From: Paul Christensen <paulc@mediaone.net>
Message-ID: <W%vX1.5513$Xt4.34001697@news2.jacksonville.net>
Source record: 96398

ETO/Alpha PA-70V Liquid-Cooled Amp in Very Excellent, extra nice condition. This is the amp that is identical in appearance to the Alpha 77Dx and 77Sx, but uses a smaller, more
compact cabinet. The amp is very clean inside
and out. Full output using a single 3CV1500A7 triode with attached "water boiler." This is one of the few amateur-class tubes that can be rebuilt to original Eimac specs. This amplifier takes distilled water for cooling and runs extremely quiet, using only a whisper fan for supplemental air convection past a passive radiator. Factory's glitch protection and AG6K parasitic mods
performed. Output circuit is extra rugged, using a Jennings vacuum variable capacitor for output tuning.

The entire plumbing system is new, using all Teflon components from New Age Industries, Inc., which exceed original mechanical and electrical specifications. The tube was recently checked out by John Cavanary at Econco and was put through hi-pot and emissions testing. All testing results were excellent.

Amp comes with original factory manual and power cord.
I am asking $3295 + shipping and insurance. If you have any
questions, I will be more than happy to answer them. .JPG images of the amp making full power available upon request. Serious inquiries only please.

Trish:
Glad to hear you're working with the Command Sets.
They are my "first love" in radio and
I have several complete, original sets on the air.

What is the model number of your transmitter?
AN/ARC-5 uses a different rack then SCR-274N
(the BC- series). It's possible I have one.

If you aren't going with the full TX-modulator-control box
set-up, here is all the 100% restorable "modification"
you need to do to a Command Set transmitter:

Lift one wire from the antenna switch and tape.
Roll the little spiral antenna contact around so
it makes contact all the time.
Check the Selector relay (the one under the chassis)
to make sure the oscillator contact makes before
the PA cathode contact.
You key the rig with the selector relay.
That's all the "mods" ever needed to use one.

The transmitters are designed for low-Z
antennas; about 12 ohms.
In order to tune a coax-fed 50-ohm antenna, you need
to put a good-quality, 2KV or better 50 PF cap in series
with the antenna lead. It MUST be NP0, since heating
will change the loading and cause chirp.
You can install it inside between the PA coil link
and roller coil or outside.
Ignore all the talk about TVI... it's nonsense.
I've done the work with modern equipment and these
transmitters, when properly tuned, are cleaner then
most YeaComWoods.

I highly recommend cleaning the loading coil.
This will help with tune-up and also help
prevent chirp. The oxides on the loading
coil and roller heat and change the loading
as you key, pulling the osc. This is a lot of
work, but well worth it.

Put an old towel on the bench so you don't loose
parts. Competely disassemble the roller coil
and roller assembly. Pay close attention to
how it comes apart. Polish all the plated pieces,

like the coil, coil contact, roller, roller bar etc.
with a good cream silver polish. Don't use
abrasives. Don't waste money on that "dip"
silver cleaner. Use a "Q-Tip" to polish
and clean the inside of the little roller wheel
as it's also silver plated. Once you get them all
shiney, rinse well to remove all the polish.
Let them dry well. Reassemble with a drop of
light oil on the non-contact end of the roller
and a dab of De-Oxit on the contact end.
Polish the antenna post and antenna contact, too.
This will pay-off when you load your rig.

If you need a diagram for a good power supply,
let me know. I can send you a .JPG file.
You need 500 V at 170-200 mils or so and 28 VDC
at just over an amp. If you can't find
a 28 V transformer, get a 12V 2 amp and
use a voltage doubler.
The original design used a voltage divider
for the lower voltages and it's easy to make.

Hope all this helps.
Good luck on your project!

Source record: 96258

On arcing 866's, adequate tube warm-up if of course important but I have run into a couple of cases where a coating on the anode (graphite, maybe) has peeled and has almost touched the cathode . This produced fireworks. Solution: ditch the tube.

Joe---W1PNH

It's not too fruitful to use this kind of logic: "everything checks out okay... now tell me what's wrong". Everything *cant* be okay. Once you accept this, we can start making progress.

You tried swapping the tubes, with no effect, so it's probably not a problem with the tubes.

The voltages are low, so either there is something bleeding off the voltage to ground, or there's too much series resistance.

Try unplugging the tube that has the low volts on it. If the voltage stays low, then there's some leaky capacitor or other leak or short to ground that is bleeding off the voltage.

That means it's time to start clipping out bypass capacitors and see if the voltage rebounds. Sometimes, not often, a capacitor will measure out just fine on an ohmmeter, but be leaky with real B+ applied. This is particularly true of electrolytics. So you may be right, the capacitors measure just fine, but fail with real voltage applied.

Or it may not be a capacitor, but a leaky tube socket. Some of the wafer sockets can get carbonized and form a low resistance path to ground.

On the other hand,
If when you unplugged the tube, the voltage zoomed up to the right voltage (probably higher), then there's probably too much resistance between the plate supply point and the B+ source. Check every series coil and resistor between the plate of the tube and the B+ source. You may have to unhook one end of each of these to get an accurate reading.

The other alternative is that the tube is conducting very heavily, due to no grid bias. This is kinda unlikely, as it would be hard for a 7H7 to conduct so hard to pull its plate voltage down to 12 volts.

You also may have a wiring problem. It's possible for radios to come from the factory miswired. Or if you've been looking at several slightly different schematics, it's possible you got a bit confused. Several times I've miscounted tube pins and hooked components to the wrong pins. It helps to have someone else with a fresh eye look things over. They may spot something that you've overlooked.

1576. DX-60 Info Needed (Heath Hum Bulletin)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-23 00:00:00 UTC
From: Ken Brookner <brooknerk@acm.org>
Message-ID: <70q6mauvv1@brokaw.wa.com>
Source record: 96266

I'm doing some work on a DX-60 and note that Heathkit had a modification, numbered DX-60-1D, dealing with adding a cap and resistor to cure some hum problems. Unfortunately, I can't find the info on where to install these components--none of the mod archives I've found have the schematic portion of the bulletin.

If someone could help me with where these components install, I'd sure appreciate it. My DX-60 hummms pretty bad on AM.

I'm also looking for the schematic to a DX-60B. Is one available as a jpeg or gif file online somewhere?

Thanks and 73,
kenb, n5lpi

On my old 520 the cure was to loosen the set screw, move the knob a little further out from the front panel, and tighten the set screw. The knob had slipped too close to the front panel and was brushing up against it ... sometimes it's the simple things that go wrong ... hope your problem is solved this easily.

Thanks for the additional helpful suggestions! This gives me some good leads to follow up. I sure wouldn't have thought to check for leaky tube sockets. All the components between these tubes and B+ source have been replaced, but who knows -- some times even new components are not perfect. I have to confess that I didn't test all the new caps before putting them in, although I normally test new resistors.

Reminds me of a tale that a friend related last week. An entire batch of new .02 caps tested leaky as heck. He didn't think to check 'em until he found a baffling problem in a set he was working on. When he discovered the whole batch was bad, it was too late to recall a refurbished set that he had sold at a meet the previous week. That set worked so-so, but wasn't wonderful, and it contained a couple of those new-but-leaky caps.

Take nothing for granted is always good advice, I guess ;-)

Cheers.

Phil

Thanks to everyone who replied. The rig now tunes smooth as silk.
(Posting the solution so that it ends up in the archives.) Ended up being
very simple. Just loosened the groved collar nut behind the frontpanel
about 1/8 turn. Since I had the front panel off, I also cleaned and
replaced the grease. Actually took longer to remove all the knobs than it
did to fix the problem!

1602. Re: GELOSO info wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-23 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <70rcd0$6f6$1@camel18.mindspring.com>
Source record: 96292

Geloso was an Italian Electronics Mfg Company. The only gear ever sold in the states was the G209 receiver circa 1959 and the matching transmitter G-220TR.
sold by American Geloso in New York. Barry Electronics in New York also got hold of a number of the VFO's for the transmitter and sold them from 1959 to 1962. This is the 40/4. It was sold without supply and case. I saw a Geloso pair in North Carolina when I was very young. I have now seen two of the VFO's...one appeared to have a built in power supply. The VFO has built in temp compensation capacitors (at least the version sold in the USA) and probably one of those is bad. I hope you have a manual and or schematic. It was considered to be very stable.

Its the standard circuit with output on 160, 80, and I think 40. Use 80 or 40 to drive the other bands.

How about going back in time and putting together a nice electronic kit, that later will provide many years of useful service. I have a NIB Radio Shack model 28-140 Frequency Standard kit. It is one of the "P" Box series from about 25 years ago. It is a stable 100kHz oscilator that can calibrate a Short Wave radio,"O" scope or freq counter, as well as, provide a time base for a counter or timer. Great for a winter's night fun. $15 postpaid in US. Interested? Larry

The 866 tubes are mercury vapor rectifiers. If they have not been used for a while, the mercury has probably precipitated, and you may even be able to see small beads of the silvery liquid inside the glass envelopes. You should run the filaments of these tubes for a 2 or 3 hours to revaporize the mercury before applying high voltage - otherwise the liquid mercury can cause some interesting shorts, as you have apparently observed. The blue glow is normal.

Source record: 96349

Hello, I have the following tubes available for immediate sale,or
possible trade for other tubes. ALL the tubes listed here are
totally inspected and tested good, WELL ABOVE MINIMUM on one of my Hickok
TV-7 D/U tube testers, all very accurate mutual conductance units. All
are cleaned, and where possible, reboxed with a label on top. If I don't
have a particular size box, tubes will be safely wrapped. I try to
provide the best packed shipments as possible. All are guaranteed to be
as described apon arrival, or you may return for refund,
less shipping costs. Due to the extreme low prices offered here for these,
a mere 5.00 minimum order is required, plus only 3.00 shipping and
handling for shipments in continental USA,(no matter what size order)
others by rate..Sorry, no picking brands or construction
at these prices,(one dollar extra per tube for special requests) but
these are all top brands, like RCA, G.E., Hytron, Westinghouse,
Tung-sol, Sylvania, KEN-RAD, National Union, and others. The quantities
vary for these, but they run 5 to 1000 pcs. each. These are just examples,
I have LOADS of other types at a similar savings, but may be a bit more
if I have to go digging for it. So, if you don't see what you need here,
just inquire, as I probably have it. Respond for further info.
Great chance get a good spare set cheap..
Thanks, read on....

For Sale: 2" X-Y scope modules. Compact design with cast and machined aluminum case, mu-metal shielding on CRT. Has internal HVPS and Fil inverter power supply that runs off a nominal 20-22 VDC source at a couple hundred ma. Also contains a pair of identical deflectin amplifiers (audio range) that allow low level tones to drive the vert and horizontal plates. All controls are preset, but available on the case via idenfied openings. Only external control that need be added is the intensity pot. Unit also has a signla sensor on the Vertical axis that will squelch the screen in the absense of signal on that channel (can be bypassed). All connections to the unit are made by a standard DB9 connector. Unit supplied with complete schematics and docs for making external intensity pot connection via terms on the DB9 connector. Unit was taken from depot pack spares for GRC-142 Ratt Van modems (tty tuning indicator) Like new condition with bright CRT. $75 post paid conus with docs as noted. I have a few units left.

Source record: 96158

I recently picked up a couple of Dovetron MPC-1000R-II "Regenerative RTTY Terminal Units". Anybody familiar with these? I sure could use a copy of the manual for one if anybody has it.

Looks like they have switchable time constants for the post-detection LP filter, so I am guessing one would make a nice analog front end for my PK-232 TU. Comments?

I believe the mod was for the 60A. I have both the 60 and 60A plus all
three
schematics. The 60 and the 60B both had 4 40mfd caps in the high voltage
power supply. The 60A was almost identical, but minus one of the 40 mfd
axial caps. The mod was to convert the 60A to the power supply that was
used in the 60 and 60B. If your 60 has hum, the caps probably just need
replacement. You prpbebly will not find 40 mfd caps, but 47mfd@450
should work just fine.

Good Luck es 73

I know TMC (formerly of Mamaroneck NY) is gone, but what ever happened to them? Did they just "fade away"? I just seems that they never kept up with technology, by continuing using vacuum tube only, manual tuning designs. The last that I heard that they were still around was in 1981. A look at Jane's Military Communications seems to confirm their disappearance around that time.

I have a Hammerlund HQ-180 forsale that works fair and is about
a 7-7.5 on a 10 scale. I also have a matching speaker with it (large
size) which I believe is a 10", also about a 7-7.5. The receiver
could probably use a good alignment to bring it up to spec. If
interested please make an offer. I believe it should be worth about
$300 plus shipping via UPS.

1632. Info Needed on PRC-47

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-24 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <363293A2.DFAE7C86@calweb.com>
Source record: 96167

Hi,

Rainy day project, my PRC-47s. Finally had time to fire them up and
although one is dead on transmit (inverter transistors maybe draws
static 10 amps but no singing in the hvps module). The other one works
but RF output is very poor. Suspect the PL177 final. Since I have yet
to score a manual for these things, I am just going of obvious points of
interest so far. Have not opened up anything other than the module that
contains the mechanica filter which I swapped out to get low sideband on
80 and 40 meters. Othewise, is there a tube drive some where?
Will the 4-65A sub for the PL177. I noticed in the basing that the
primary difference is the suppressor grid in the PL177 while the 4-65A
is pinout compatible at the tetrode level and fil volts/current are the
same. 4-65A seems to require more Ep (3KV) max than the PL177 (2KV
max). I have 4-65As, but am afraid to even ask what a PL177 sells for.
Otherwise the radio is a cute little (well little may be stretching
it a bit). Oh, is the vox an alway must use function? I guess it's
time to make an email to W7FG and see if he has a manual on this thing.

Any comments appreciated.

Greetings;
I have a Browning Mark III and would like to up hook my Siltronics 90 VFO. The receiver already has the high frequencies on the dial. I'm assuming I have to rig one of the XTL switches to the dial.
Any ideas?
I'm assuming I hook the Silki 90 to the transmitter by taking out a crystal out and putting the 'hot' side to the VFO.
Any details?

All help will be appreciated. To reply by mail remove the 'N0Spamy' from my address.

Thanks
rooh@N0Spamyerols.com

Hi folks,

We have a new addition! The Crystal Swapping Bulletin Board!

Sell those unwanted rocks & put them to use!

Or even give them away to someone who needs them if you wish!

Now you can find CRYSTALS for your radio FAST!
Post instant ads and find just what you need. Look through the listings and you may locate just what you need in a hurry!

No more waiting days or weeks for your ad to appear!

FOR SALE, TRADE and WANTED ads are welcome
You can even post a list of frequencies.

Visit today - Check out:

http://pluto.beseen.com/boardroom/b/21532/

And a thank you to everyone who has supported the old Crystal Swap Page at:
http://www.mnsinc.com/bry/xtalpage.htm

It will remain up until the new page is fully charged up with ads!!
73 de AF4K, Bry

The HQ170 and HQ180 had an updated A model. Amoung other things
was a seperate filament transformer that kept the HF Osc on all
the time when the unit was plugged in. Also the A models had a
hinged lid on the cabinet top which the non A models did not. Most
obvious cosmetics was the A models had a dark semi gloss or satin
black around the dials where the non A model had the usual darker
than the panel flat gray. C indicates the unit has a clock whether
it is an A model or not. The clocks were by Telechron and came in
both 12 and 24 hour formats. The A models may have also had the
power supplies solid stated but I cannot remember for sure.

Hi everyone. If you're anywhere near Feeding Hills, MA on November 6th, stop by the annual Hampden County Radio Association's auction. Come to buy, come to sell, all are welcome. Usually a good place to pick up old stuff at good prices.

Sellers donate 10% of selling price (up to $10 maximum) to the club. And of course, what does not sell must go back home!

Date: November 6th, 1998
Time: Auction Starts at 7:30 PM
Location:
Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030
Talk-in: 147.105 repeater.

This came with an NC-240D that i'm keeping. Both the cabinet on the
NC-240 and speaker were spray painted with a light coat of black
paint. It actually looked quite nice....an excellent job...looks like a
perfect
black wrinkle finish....but not original. I removed the black paint on the
NC-240
revealing the original excellent grey wrinkle finish. I'm sure the speaker
would clean up as easily. The speaker cabinet in perfect, no scratches
or dents, you can see the wrinkle finish clearly, it looks just like black
wrinkle! The speaker is perfect as is the original cloth wrapped cable
with the 5 pin plug on it. all the "art deco" feet are with it.. $95
shipped

From: Steve Pazar <zarco@sonic.net>
Message-ID: <3633D831.3929@sonic.net>
Source record: 96057

I've got the following for sale;

Heathkit HM-102 Power/SWR Meter, has two power ranges of 200 watts
and 2KW with built in coupler, usable on HF bands

Heathkit HM-2102 Power/SWR Meter, two power ranges of 25 and 250 watts
with built in coupler, usable on VHF and UHF bands

Both units work fine and are in good cosmetic condition, but could
use some cleaning (Heathkit paint...). Asking $40 each plus
shipping from northern California.

Steve

I have a Sylvania Electric Model 131 greenface. This scope dates back to the late 40s to early 50s. It was stored in sealed plastic for most of it's life. An easy 9 out of 10. Works fine. Sharp and bright. All completely original. If you collect scopes this is one to be proud of! It's not big and weighs 10 lbs $140. 73 CHRIS ve3ngw/w4 FLORIDA

1695. HALLICRAFTERS SX-130

Source record: 96061

This radio is brand new--Hallicrafters S38E with the rare????
mahogany finish. Only catch is the damn fool who took it out of the box
for the estate sale threw the box away. Makes you just want to kill!
Anyway--not a scratch or mark on this set. Brown and gold face
with brown knobs/gold inserts. Body of the set is grain painted to look
like wood. Very neat looking set. Works--switches need to be cleaned--
the spkr/phone slide switch is intermitent.
Price police alert---I want $150 for this little beauty + UPS
for 19 pounds from 24012.
Thanks for the read. Craig

I had already replaced every paper capacitor in the set, even the nasty ones crammed W-A-Y under the bandswitch. At this point I haven't changed out all the ceramic caps because they seem a lot more reliable. I did replace a couple near spots that looked scorched due to the arcing bandswitch, however.

Cheers.

Phil

Check the past message database in Deja-Vue.
We covered this topic extensively a couple of months ago.
In any event, I visited their factory in 1985 - they were alive - if
not well then. I was thinking of buying some of their equipment
for a marine coastal station. They remained in business thru at least
1990.

Actually, they had modernized many of their designs with solid state
synthesized exciters, etc. Most of their transmitters up to 10KW, were
all solid state except for the driver and finals. They made a
computer control system for remote automation of a HF station.
The syst;em was called "TechniMatiC" and was state of the art

Thier busness declined slowly along with the decline of HF
point-to-point communications and the rise of satellite
communications. They tried to enter the AM broadcast transmitter
business but couldn't compete. Their pricing/service was geared to
goverment contract business. They were additionally hurt with the
decline of defense spending.

I believe that it was a family owned company and the owners simply
shut it down in the early 1990's. I understand that a parts/service
organization still exists but not at the original factory site.

BTW, the company was the Technical Materiel (not- material) Corp.
Most folks misspell it.

Source record: 96180

Hi all,
All I can add is that the Geloso VFO was also used in some of the
transmitters manufactured by KW Electronics, Dartford, Kent, UK.
The KW ' Vanguard ' was one model.
I think the VFO used a 6C4 triode tube followed by a buffer amp
(I forget the tube type). By modern standards it would be considered to have
poor frequency stability but way back then.....it was OK.

1726. 575A rectifiers FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-25 00:00:00 UTC
From: napoli@i-2000.com
Message-ID: <363a8cc6.1898802@news.i-2000.com>
Source record: 96191

I have two 575A rectifiers Sylvania, that came from a defunct AM
station I was helping clean out--they are obviously new, with the
original packing and the original boxes..they we're spares for the
stations Collins 20V2(long sold)...The only problem with these tubes
is that the glass envelope, and the metal bases have come apart. It
is obvious both visually, and with an ohmeter that the filaments are
intact, and that the base and envelope have to be glued, with whatever
kind of magic glue that's used for such things.
I GUARANTEE these tubes to be as represented, or I'll gladly refund
your purchase price...I'll even throw in an additional pair of 575A,
which we're obviously pulls from the 20V2..don't know anything about
there condition....$50.00 + shp Bob K2LGO
Pse remove the (ns) from my adr Thanks.....

Does anyone have any schematic info on a Harris RF-602 Interface Conrol Unit? This was apparently part of the 1 KW RF-745 transmitter system (RF-6XX series components). It has a 1.5 KW power meter and an open frame RF transfer relay. It's about the size of the control box that is used with the RF-601 coupler.

1735. TMC question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-25 00:00:00 UTC
From: KC2WE@aol.COM
Message-ID: <67369460.3633a3df@aol.com>
Source record: 96200

Tnx to those who responded on my TMC question.

As far as the use of the word "Materiel" in the full name of TMC, looking in the Webster's Dictionary, "materiel" is specifically equipment and supplies for war or the military. So, Doug (dslosty@pipeline.com) you are correct about the frequent misuse of the spelling.

What I stated about TMC designs being too little, too late, can be explained by the following example:

While in 1980 TMC was still making the 0.1 watt synthesized HF exciter (SBG-1; AN/URA-41A) for 2 to 30 MHz (it weighed 600 lbs and was 6 ft high), Harris was producing the RF-131 HF Exciter , just as stable, reliable, weighs 60 lbs, consumes 70 watts of a.c. power and is only 7" high. It has the same electrical specifications as the TMC unit except that the TMC gear used about 500 watts. The so called TechniMatic (reg. tm) unit was "only" 300 lbs. Not much of an improvement.

Even with the loss of HF business, TMC must have just lost out to Harris and others who went after the HF tactical radio market with better state of the art designs. Collins also got out of the HF radio market (208U series) because they were just simply too "boatanchor" like TMC, but at least they were autotuned.

Collins had their early boat anchors too. They had an exciter we used in the Army in the 60's & 70's called an OA-2180/FRT-51. (BTW does anyone have one of these ?) It was used with the AM-1154/AN/FRT-51, a 6 KW beast that used 3 ea. 4-1000A's in the final for 1.75 MHZ to 30 Mhz. The 0.1 watt OA-2180/FRT-51 exciter weighed 1100Lbs, but at least it and the AM-1154 amp were auto tuned.

The TMC 10KW and 40 KW transmitters were hell to tune. They had all manual settings. We had to train students at the Signal School for 14 weeks just to be able to tune one properly (MOS 32A20). Everything TMC was manual until 1980. To QSY an FRT- 52 (10 Kw using a 4CX5000A) took up to 5 minutes, especially if the Master oscillator wouldn't settle down or the frequency change was more than 500 KHz. Even a well maintained TMC Master oscillator drifted too much for multi-channel RTTY transmission in those days. We always had to constantly "tweek " the TMC gear to stay on frequency.

Collins 208U-10 on the other hand takes about 15 -30 seconds to tune and QSY. The Collins gear did NOT drift btw.

Source record: 96203

This transmitter for the most part is all there, including tuning units and charts, coils and tubes and manual. Needs some work done on the high voltage power supply deck (needs filter capacitors). Internally this radio looks clean but dusty, has not been used in over15 years. External condition is good except for the front pannel which most of the lettering has flaked off and what remained has been painted over. There is one snag concerning this transmitter though. I am concerned about the lower power supply deck because the oil filled caps leaked oil on the chassis. Most of it has been cleaned up but I am not sure about the issue of PCB's contained in the oil and what residue may be left.

Price $100.00 OBO

Yes the big B is in there... modern tubes (last 10 to 15 yrs) perhaps not... and yet it's mentioned in all of EIMAC's past literature as well as safety articles in QST, CQ and 73.

Given today's present legal environment, I can't understand why EIMAC would prefer to hide ..errr spin.. the truth (Duh)... since a lucky lawsuit could mean millions to some dead ham's widow.

As for the CIA study... the by product of this agency is disinformation... mixed with a type of ignorance only a PhD can generate..

If you happened to catch Frontline on PBS a few weeks ago, they were discussing Bio-war and open air dispersements. They had an internal memo from William Casey listing all of CIA successful tests and his fear that the Russians may be even further ahead.

Which of course they were (they supposedly they have stopped - by treaty)... but biochem weapons still remain the poor nations answer to the nuclear club which is why nations still conduct research.

A number of poor nations (I.E IRAQ) have used this method to control or eradicate problem populations on a widescale almost routinely. Small biochem releases (such as teargas) are routine everywhere.

It's cheap and works well... something the German's knew all too well in WW I.

but if the CIA sez it don't... who am I to argue?

Now we beat that subject to death... let me tell you about the Four Corners Hantra virus. It's found in rat poop. One breath and three days later, your dead.

No cure. 3 days - then QRT and a new QTH.

..now what about that old radio you found in the barn... ??? Still want to repair it inside?

Source record: 96025

OH MAN... NO ! NO ! NO !... DON'T DO IT...

I know from 1st hand... if you have a lab test it, it will cost YOU $200 - $400. That's just for the prilim tests - more if you want to go into traces.

If they find something nasty - they must notify the EPA immedately. The EPA will dispatch an inspector(s) and your local fire/police department to your house.

You could be evacuated for several days while they perform tests. and/or have property confiscated and/or destroyed.

but that's not the bad part... when you try to sell your house - you must disclose the fact that the EPA paid a visit. It will be in local and county records.

This happened to my ham friend (I won't give his call but he was my elmer). The story is his house was next to an old gas station. The station went out of business and was paved over to make a parking lot. After a very very heavy rain, some fowl smelling sludge appeared when the sewer back up in his basement... he wanted to do the right thing...

You can guess the rest of the story... it took him 4 years to sell his home of 35 years... he did so at a major loss. It was torned down and made into another parking lot.

Last I heard, he was still trying to sue Texaco. Told me it took 2 years just to get past the legal delays. He will probably never see a penny.

It sure OPENED my eyes...

Yes it was Marconi. In fact, both operators were employee's with Marconi.

During the emergency, at first they attempted to contact other Marconi ship stations per company practice. Several ships were closer but were called upon too late.

The one surviving operator continued handling traffic on the rescue ship. When the ship pulled into NY, Mr Marconi was there to meet him.

1768. Motorola Handi-Talkie

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-26 00:00:00 UTC
From: Markem@primenet.com
Message-ID: <710np1$oc2$1@nnrp03.primenet.com>
Source record: 96071

A friend of mine came across a Motorola Handi-Talkie recently at a garage sale. It's the unit with the telephone-like handset that snaps into the carrying handle. It's marked:
Handi-Talkie
FM Radiophone
H11-1A M
33.14 Mc.
The date stamps inside are Oct 1953.

It appears to use up to 8 D cells, I assume for the filaments, and has snap connectors for several (3 or 4) other batteries, I assume for the B+ supply. Does anyone know what type battery it uses?

Guessing the obvious, I'd say it's an FM unit for 33.14 Mc. but am curious about other specs, such as power output, tube complement, etc.

Are these units common? Any idea what it would be worth? This one is in very good condition but is missing the antenna.

Any info will be appreciated.

Would like to know if Cornell-Dubilier oil filled capacitors rated at 4000 volts, mfg. in 1949 and used in BC-610-F transmitter high voltage power supply, may possibly contain PCB"s. What year did the use of PCB's become common practice in oil filled capacitors? The reason that I would like to know is that these caps sprang a leak in my BC-610-F transmitter and made a mess of the power supply cassis. How concerned should I be about this oil? Should it be treated like something hazardous or should it just be treated like oil? Any help would greatly be appreciated.

Thanks,

Greg Eicher

What an "interesting" (tho tacky!) situation...one that's repeated time
and again by some persons. <g> No doubt his KWM-2A is a "rare" one, as
so many items auctioned off on eBay are described! :) Guess it would
never sell here at a fair price, huh? Afterall, nobody here pays "fair"
prices...heck, nobody here would want a KWM-2A that's really loaded....
we're all a bunch of "cheapskates"...and everybody knows the "BIG spenders"
are over on eBay outbidding each other to see who can pay the most! <g>

1780. Mag article on kid's home brew reactor

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-26 00:00:00 UTC
From: boeing377@aol.com
Message-ID: <19981026022534.26967.00001453@ng-fb2.aol.com>
Source record: 96083

This is slightly off topic, but is sure interesting. Pick up a copy of HARPER'S magazine, Nov 98 and read "The Radioactive Boy Scout". This kid (apparently an Eagle Scout) became fascinated with nuclear experimenting while working on an Atomic Energy merit badge. He salvaged Americium from hundreds of "broken" smoke detectors, Radium from old instrument and clock faces (maybe thats where all the missing R 390 meters really ended up), Thorium from Coleman lantern mantles, tritium from watches and sights, etc. He used various processes to purify, concentrate, filter and isolate these materials. He then proceeded to construct a working neutron gun (using first Aluminum and later Beryllium as an alpha particle target for generating neutrons) and then went on to attempt to enrich isotopes. He was on his way to making a crude breeder reactor when things fell apart. He was stopped by the cops who searched his car and found a trunk full of chemicals, radioactive material and (here we are on topic) vacuum tubes. His home lab became a Superfund cleanup site due to unsafe radiation levels, but that was AFTER his mom threw out all his "good stuff" in the garbage fearing that their home would be seized if it were found. Scary story. Not fiction!

1781. FS: Surplus Boatanchor Manual Copies (TR4CW, HW30, HA410)

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,sci.electronics

I've recently acquired a Panoramic (Singer) Universal Spectrum Analyzer Model MF-5/GD with plug-in CA-5/GD. Looking at the data plates I get the impression it was spec'd by the USAF. I also have a Panoramic (Singer) MF-5/CA-5-1 ALFRED Spectrum Analyzer, similar to the above, the manual of which bears NAVSHIPS NO. 0967-302-2010, which suggest USN spec.

I'd like to hear from anyone who owns/operates or has used this equip't, esp in USAF or USN service. I'd also like to find out what the significance of the "/GD" suffix is.

Thanks,

John Mackesy VK3XAO

FINITE ELEMENTS FOR ELECTRICAL ENGINEERS, Silvester & Ferrari.
Cambridge University Press, 1983. Softbound, 209 pages.
An introduction to Finite Elements and their application in
electromagnetcs analysis (such as antennas). $8

TRANSDUCER INTERFACING HANDBOOK. Sheingold. Analog Devices, 1981.
Hardbound, 231 pages. Very good condition, with dust cover.
This book is still published and sold by AD. $6

FIFTY YEARS OF A.R.R.L. ARRL, 1965.
Softcover, 151 pages. Good condition. $1

LINEAR SYSTEMS IN COMMUNICATIONS AND CONTROL. Frederick & Carlson.
John Wiley, 1971. Hardbound, 575 pages. Very good condition.
Topics include Fourier & Laplace transforms,
z-transforms, feedback systems, etc. $6

TIME-HARMONIC ELECTROMAGNETIC FIELDS. Harrington.
McGraw-Hill, 1961. Hardbound, 480 pages. Classic black cover
in excellent condition. Interior has some annotation.
Written as a graduate level text but also useful as a reference book.
Presents mathematical techniques for handling electromagnetic
ngineering problems dealing with sinusoidally time-varying
fields. $12

ELECTRONIC MEASUREMENTS. Terman & Petit.
McGraw-Hill, 2nd ed, 1952. Hardbound, 707 pages.
Classic black cover in good to very good condition.
Interior also very good. Excellent book by well-known
authors on such topics as measuring tube characteristics,
amplifier specifications, receiver specifications, etc. $12

ELECTROMAGNETICS. Kraus. McGraw-Hill, 1953. Hardbound,
604 pages. First edition of a classic work by a well-known author.
Classic black cover in very-good to excellent condition.
Interior has a small amount of penciled annotations. $12

FIELD-EFFECT TRANSISTORS: PHYSICS, TECHNOLOGY AND APPLICATIONS.
Wallmark & Johnson. Prentice-Hall, 1966. Hardbound, 376 pages.
Very good condition - and the title says it all. $7

DIGITAL COMPUTER AND CONTROL ENGINEERING. Ledley.
McGraw-Hill, 1960. Hardbound, 835 pages. Classic black cover
in fair condition (some rubbing). Interior good with some
highlighting. A multitude of topics, including boolean
algebra, numerical analysis, electronic design of digital
circuits. $6

TECHNIQUE OF MICROWAVE MEASUREMENTS, Vol II. Montgomery.
Dover, 1966 (1947). Softbound. pages 473-939.
Dover reprint (split into two volumes) of one of the classic
MIT Rad Lab series. This is the second volume (pages 472-939) in
good condition. $4

Ok. I need a really rugged SW rcv for my son. He is in 1st grade and has really taken an interest in radio. I cannot allow him to use my Hallicrafters anymore (I want it in one piece), and I would really like to give him a solid military type rig to use. I have an interest in the Minerva Tropicmaster, but they seem to be as rare as hen's teeth. Does anyone have a SW radio that will stand up to a curious 1st grader? It does not have to be pretty, just in good working order. Post to the NG or email me. His birthday is Nov 6, and he is getting impatient!

Thanks!

Paul

Beryllium is very toxic. Only Five parts in One million is enough to kill if inhaled. Can be found in your common ceramic 4CX250's and other RF power tubes. You'll need to process the ceramic to extract the Beryllium.

Won't tell you how cause there's enough nuts in the world...
..and some of them are hams...

How about a BC-348? I don't have one, but wish I did. My recollection is that it would take a grenade at a couple of feet to hurt it. But maybe you had something less massive in mind.

Doug Moore

I am aware of PCB's being in general use in power transformers from mid 50's to late 60's.

However, being military equipment, the military is only concerned about short term health, there might be other toxic chemicals being used that are far worse the PCB's.

I recommend that:

(1) You don't take the chance to expose you or your family
(2) Take the equipment outside to work on it.
(3) Use rubber gloves and sponge off what you can
(4) Place in bucket and mix with used motor oil.
(5) Take used motor oil to re-cycle center. They will filter it.
(6) DO NOT Flush down sink or let it enter the water supply.
(7) Use clean sponge and water to wipe remains.
(8) Place used sponges in plastic bags and throw away.

This is probably a bit over the top but better safe than sorry.

-B

Much as I love the BC-348, there's one hitch in letting
a 6-year-old at it.
If you crank the tuning dial past the end stops,
it will lock in place and you have to open the chassis
to unlock it. My 2 and four year-old daughters
love tuning daddy's radio and I've gotten pretty
quick at opening and unlocking the thing :).
Might be able to make a 1st grader understand.

Best Luck with it,
73 Dave AB5S

Not in all 4CX250s. I have it on good authority from an Eimac engineer
that they never used beryllium in ceramic tubes, only in thermal links
for conduction-cooled tubes. And the toxicity is dependent on inhaling the
beryllium dust -- which as the CIA found out in its aerosol LSD experiments
associated with MK-Ultra, is difficult to ensure without dispersing huge
amounts of the active agent.

Take a look a truth -- here's a place where you can access MSDSes:

http://msds.pdc.cornell.edu/issearch/msdssrch.htm

See how "dangerous" some chemicals actually are. Be sure to look
for ethanol, sodium chloride, and the dreaded compound dihydrogen oxide.

rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.ham-radio.swap,rec.radio.amateur.boatanchors

Ten-Tec Argonaut 505 QRP SSB/CW transceiver. Nice QSK, 5 watts input, about 6 lbs. Draws less than 100 mA on receive. (This is less than the more common Argonaut 509.) According to Ten-Tec advertising, there were only about 2000 of these produced. This one (serial number 73) is cosmetically about a 7 out of 10 (it has one scratch that is noticable on the top of the front panel), and operationally it is absolutely perfect. In fact it is a tad more sensitive than my Argonaut 509. It has been recently completely aligned. Comes with a copy of the manual. Great for camping, or just QRP operating.

Reason for selling: I have an Argonaut 509 as well and can't really justify keeping both. I decided to keep the 509 for nastalgic reasons because I used to have one in my younger days. If you would like to look at some data, including a scanned QST advertisement, see: http://asd.state.va.us/tentec/tttrans.htm

$250 plus shipping.

I have two 575A rectifiers Sylvania, that came from a defunct AM
station I was helping clean out--they are obviously new, with the
original packing and the original boxes..they we're spares for the
stations Collins 20V2(long sold)...The only problem with these tubes
is that the glass envelope, and the metal bases have come apart. It
is obvious both visually, and with an ohmeter that the filaments are
intact, and that the base and envelope have to be glued, with whatever
kind of magic glue that's used for such things.
I GUARANTEE these tubes to be as represented, or I'll gladly refund
your purchase price...I'll even throw in an additional pair of 575A,
which we're obviously pulls from the 20V2..don't know anything about
there condition....$50.00 + shp Bob K2LGO
Pse remove the (ns) from my adr Thanks.....

Joe OM,
I have one (sorry, I want to keep it). But Amphenol used
to give them away as promotional items. Try them, and see
if they still have them. It would not surprise me if they did;
the Smitch Chart is, of course, still widely used today (which is
why Amphenol may still have them).

The Californian could have saved everyone
aboard the Titanic if they had known the ship was sinking..
==========
In their defense, they had stopped for the night as was the custom for all ships at the time. Her boilers were all cold except for the power plant. Even if the captain had known, it would have taken the stokers 15 to 20 minutes to get her up to steam to make revolutions. Possibly another 30 to 40 minutes to cover the 20 mile distance. Almost an hour at best. Anyone in the cold North Atlantic with just a life vest could expect to live for 15 to 25 minutes tops. Could she have made it in time?
Perhaps... But there is no getting around the fact..

The White Line did not provide enough life boats for all.
They made way full speed during the night in a known ice field.

The Maritime Museum in Norfolk, VA has a great Titanic display.
The radio room is done as a very close replica of the Olympic [sister
ship], as to my knowledge there are no pictures of the actual radio room
on Titanic. The museum people were great, built everything to spec. The
equipment is all on loan from various private collections.
The receiver was a Marconi Multiple Tuner w/ a magnetic detector
Backup transmitter used a 10" Marconi coil and fixed gap//this was the
unit used to send the CQD/SOS. BTW--the museum has a tape loop running
in the display with actual recorded spark trans//I believe this were
done at the RI Museum of Steam and Wireless.

1817. Email reflector for buying/selling tube type gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-27 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <715haq$m9v$1@ns2.foothill.net>
Source record: 95970

For those interested in buying or selling older ham gear,
tube type items and accessories, including homebrews,
there is an Email Reflector called baswaplist.
It is FREE. It has about 720 subscribers
It is very limited to certain purposes.

IT IS FOR buying, selling and swapping of :
Tube Type and Older ham equipment, parts,
accessories, and manuals and catalogs.
Books and periodicals concerning tube type
equipment and older ham gear.
Single one time announcements of swap meets.
Though, NOT including who will attend or what
specific items will be offered.

IT IS NOT FOR:
Discussions, other than very SHORT and very
general discussions of pricing, packaging and
shipping.
Commercial advertising other than for the sale
of specific PRICED items of the nature described
above. In other words, no institutional type
advertising.

LIMITED (but not totally banned) ARE:
Repetitive ads.
Offering of items for sale without prices.
(Very unique items may be
listed without prices.)
A reasonable amount of ads relating to Tube Type
Domestic Broadcast Receivers and Parts
are permitted.

Since this reflector has some subscribers that are newbys,
gear listed for sale should have the Manufacturer's
Name, Model and Short Description (Example:
"Gonset 6 Meter Receiver" "Heathkit SB-200,
80 - 10 M Linear" etc.) Please avoid using lingo.

As stated above, this list is very limited to those purposes.
A few examples of what is NOT to be posted:
Thank you's or apologies.
That an item has been sold.
That a computer has been down.
That a SPECIFIC listed item for sale has too high
or too low a price.

That an item may be for sale, but with no price
(unless the item is very unique).
That an item is being offered without a price
on another available list, or URL.
Referrals to E-Bay.
That someone is sick or dying.

TO SUBSCRIBE: SEND Message to: majordomo@foothill.net
In MESSAGE body SAY ONLY: subscribe baswaplist.
Then the email address of the sender will be added to the list.
To unsubscribe do the same, only say "unsubscribe" instead of "subscribe"

This list is CASE SENSITIVE as to the addresses of subscribers, that
is regardless of whether your ISP at your end is case sensitive.

Messages sent directly to me requesting subscribe or unsubscribe
may be ignored, or at best sent some kind of prepared boiler-plate
instructions.

I run the list. I am Eugene Rippen. Flack may be directed to me
at soundval@foothill.net.

Roy, I had the same problem this summer. I was in a temporary (rental) mobile home while doing some consulting. The park owners were obviously born rectally and had no sense of humor at all. When I asked about putting up a 15 foot vertical ant they told me that they would have the police bodily throw me and my stuff out if I ever mentioned amateur radio. Seems, from what I learned later the guys first wife ran off with a local ham. Knowing him I'm sure she was aplauded by all who knew him.

Anyway, I solved the problem by buying one section of a radio shed TV antenna mast and the roof mount kit. I cut 1' off the mast, bolted 3 Bilal Isotron antennas { (719) 687-0650 } 40, 20, & 15 meters to this shorty mast. I got a 55 gallon plastic barrel from a local soda pop bottler and cut 1/3 of the bottom off of it with a carpet knife. In cutting I left 5-1" X 1" tabs sticking down, bent them at 90 degrees, put a 1-1/2 inch hole in the top and set this assy down over the shorty mast. I screwed the tabs down to the roof to hold the barrel, which held the mast straight (mast base sccrewed to the roof and mast held vertical by the hole in the top of the barrel).

I sealed all holes and the hole for the coax with generous applications of silicone bathtub caulking. I put the coax thru a few ferrite beads as it came thru the roof (1:1 Balun) to keep the RF out of the shack.

Most importantly, I spray painted the barrel "SEARS" "COOL KING" "CONDITIONER" with stencils and had a local refrigeration man, with truck and ladders, install it for all to see. Everyone now asks me how my new air conditioner works and I truthfully tell them that it seems to reach all the way to Alaska for me.

I have a handfull of the isotrons and am a confirmed lover of these little ugly wave magnets. I cannot tell the signals from or to them to be different than those from a 2 element

beam. They require NO GROUND, and 3 fit in a barrel perfectly.

I have no stock in Ralph Bilal's skunk works. Read the manual several times and do as it says and all will be well. Call him if you have problems and he will, as he did me, point out the part of the manual that you didn't follow.

I would not take any chances. Take a small sample of the oil (on a Q
tip?) bag the unit and the sample and get it tested. If the test comes
back positive call a hazmat company to arrange disposal.

Message-ID: <19981026203409.13850.00001591@ng-ft1.aol.com>
Source record: 96033

Christopher,
You may run into a problem because the model 90 vfo actually put out a frequency 5.5 mhz below the actual CB channel frequency, ie. 22mhz. They were built that way because the Siltronix radio it mates with uses a transmit mixer/5.5mhz oscillator circuit to generate the actual CB channel frequency. The Browning Mk111 uses either 13mhz crystals and a transmit frequency doubler, or a straight 27mhz crystal, one for each channel. The vfo will have to be modified either way, unless it has already been done. You will need to connect it to a frequency counter to verify the output frequency to see if it's useable.

Good Luck

Bruce

PCB's were used for decades in oil caps and transformers. I dont
believe that instant deaths of thousands of servicemen resulted from
this.

I'd assume that it IS pcb laden oil (because it probably is)... put on
gloves and carefully and completely wipe up the mess. If you feel
strongly about it, take the waste material to the hazmat dispo place
to discard.

I'd not eat a cheeseburger after messing with PCB laden oils, but
neither would I over react (IMHO) to a common chemical used for
decades in the industry.

If all else fails, tell me where the 610 is and I'll remove it for you
free!

>Titanic use a Marconi device? Or was it something different. Opinions
>please...

Hello Joe,

The Titanic was equipped with a 5 KW Marconi spark set. Range was up to several hundred miles in daylight, and up to 2000 miles at night.

At that time, the Marconi company and others (Telefunken was a competitor) leased the entire wireless system to the various shipowners. The equipment actually belonged to the Marconi Company, not the White Star Line. And the wireless operators (Jack Phillips and Harold Bride) were (technically) employees of the Marconi Company. (All on board were, of course, under the authority of the captain while at sea).

At the time of the sinking (1912), wireless was so new that operating practices were not standardized. There was no requirement that ships above a certain size, or those carrying passengers, have wireless equipment. There was no requirement to listen at regular intervals for distress or other safety related calls, or to carry a certain number of wireless operators. Even the actual distress call was not standardized - Titanic used both CQD and SOS.

The nearest ship to hear Titanic's call for help was Carpathia, which was 58 miles away at the time the call was first heard. She changed course and steamed at maximum speed (17+ knots) but arrived several hours after the Titanic sank.

There was another ship, the Californian, which was less than 20 miles from Titanic, and was stopped because of the warnings of ice ahead. Californian had wireless, and had passed ice warnings to the Titanic earlier in the day. But she carried only one wireless operator, who shut down about a half hour before the Titanic struck the iceberg. The Californian could have saved everyone aboard the Titanic if they had known the ship was sinking.

For more detail, there are several excellent websites that are easily found by searching Yahoo. Also, the Walter Lord books "A Night To Remember" and "The Night Lives On" are good starting points.

The excellent James Cameron film "Titanic", while skillfully blending history and fiction (the only really fictional stuff are the Jack/Rose/Cal/Rose's mother characters - everything else was historically accurate, as far as I

could tell) unfortunately doesn't spend any real time on wireless. (The recreated wireless shack is absolutely perfect, though). For a clearer picture of the role played by wireless, rent or buy the 1958 British film "A Night To Remember", starring Kenneth More.

Any more questions?

Art,

Sorry, you're wrong on this one. The 2CW4 and 2DS4 are 2.1 volt /
450 MA heater. RCA used these in quite a few B/W and small color
portables with series string heaters in the early 70s.

Hi Joe,
Yes, the Titanic was equipped with a Marconi system. And if you want to know
"way too much information", the following is from "Titanic: Triumph And
Tragedy" by John P. Eaton and Charles A. Haas....

"... the Marconi apparatus aboard Titanic was the most powerful aboard any
merchant vessel. It was powered by a five kilowatt motor-generator, fed at
100 volts dc from the ship's lighting circuit; and independant oil engine
generator was installed on the top deck, and a battery of accumulators was
provided as a standby. The equipment's gauranteed working range was 250 miles
under any atmospheric condition, but actually communication could be
maintained up to about 400 miles, while at night the range for both receiving
and transmitting was often up to 2,000 miles. Some time after January, 1912,
Titanic's call letters were changed to 'MGY' (note: they were at first
'MUC'), letters previously assigned to the American vessel Yale."

Someone suggested mixing PCB ladden oil from a BC611 into motor oil & taking to a recycling yard.

DON'T!

You will be breaking some very serious federal / local laws. If you get caught doing that, you might lose your house or any place that is "contaminated" with PCBs. Plus big fines, etc. Recall Times Beach, MO, where the entire town was levelled because some jerk sprayed PCB oil on the dirt roads. I personally do not believe it is that dangerous, but, I didn't write the law, and this is very hot topic for local & federal prosecutors. It plays really well on the nightly news.

Best thing to do: Remove the offending part, wrap securely, and take to your local community "Haz-mat" round-up collection. Take it anonymously, and just say "I found this." and walk away. They will know what it is & what to do with it. Repalce the bad part with new one. They show up here fairly often & cheaply.

73 & stay out of jail,

Don Davis DXGUY@earthlink.net

Source record: 95996

I have a Gonset model 910A also known as the "Sidewinder"? It is a hybrid transistorized receiver and 3 tube transmitter chain. It is CW/AM/USB rig covering 50-54 MHz in 4 bands.

Does anyone have info on:

1) What the middle tube in the transmit chain is supposed to be? I've seen some circuits that use a 12BY7, but the filament connections in the rig do not match that tube.

2) The pinout connections on the back side which I believe originally hooked to a clamp on type power supply unit.

3) Schematic or operating manual for this rig. I have checked the Internet sources for manuals, but none have this rig listed.

Looks like this should be a good one for 6 meters! Please help if possible, I like to get it on the air!

I'm fixing a Dentron Clipperon L power supply. One Capacitor went out so I'm going in to fix that problem. Does anyone know of a good source for PS designs. The shame is newer style computer grades will probably replace the old. I have a aversion to opening gear to fix it all the time.
One of my options is also using my Thordson CH series transformer. Does anyone have any original designs for that transformers filtering. I have access to the old military gears designs of the gear it came out of but really would like a cleaner modern one. I also have a fear of 3KV or 6KV live off the leads of that transformer doing some damage in my shack.
Thanks for any help, Jim DeTour Aiea Hawaii

1878. FS: Two Unusual Receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-28 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <19981028113857.04892.00000490@ng115.aol.com>
Source record: 96106

I am selling two unusual older receivers from my collection:

National NC-101X receiver, with matching National speaker. This NC-101X is in very good condition. It is the ham-band only version of the famous movable catacomb National receivers. This receiver has had the S-meter conversion (probably done in the late '30's). It has been re-capped with Orange Drops and aligned. The cabinet is excellent, and the PW dial just glides. It is one of the most sensitive and best CW receivers I have ever used. Complete with original manual. Price $300.

Technical Radio Company model LRR-6, circa. 1945.Don't look in Ostermann's or Moore's - this communications receiver remains undiscovered by either of these books. It is a 15 tube communications receiver with three ranges of IF selectivity. Has all the usual features: BFO, ANL, S/R switching. A very unusual feature for a receiver like this is the front panel "magic eye" tuning indicator. In very good cosmetic and operational condition. with copy of manual. Price: $250

Since both of these radios are very heavy, they are for PICK-UP only at Greenville, SC.

Surplus generator to sell.

Actually I have a couple of them but plan to
use one with a little 3cyl motor for
powering various projects.

400Hz, 110V, 3phase, 30KVA generator.
No prime mover. Just generator.
Operating speed is 8000 RPM.
Used, spins freely on quiet bearings.

$450 plus shipping from Atlanta.

Also have 3:1 planetary speed reducer if you want to
spin it with a turbine. $200 additional.

Add some rectifiers and make a welder :-)

1897. Source for power transformers?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-28 00:00:00 UTC
From: David Barts <n5jrn@ricochet.net>
Message-ID: <3637D5C9.4FDF4C10@ricochet.net>
Source record: 96125

Anyone know of a good *cheap* source for a transformer that has a B+ winding of around 300 volts at 150 ma and a filament winding of 6.3v at 6.5 A?

I have a Hammarlund SP-400-X that's been sitting around collecting dust for altogether too long, and the time has come to build a power supply for it and put it to work.

It wants to see a B+ voltage of around 250 volts at 120 ma (stock supply feeds 380v to the plates of the audio output tubes, but those same tubes get by on 225v when operated via batteries according to the Sams Photofact I have, so I'm not going to worry if I can't get the full 380 volts). B+ winding on the one in the original supply is rated 150 ma according to the schematic.

Antique Electronic Supply sells transformers that meet these specifications, but at around $70 each! Would one from an old TV set (I know those had lots of tubes, so also had hefty current requirements) be likely to have windings that work?

I'm trying to reconstruct the early radio history of my former employer, an oil company that explored for oil in Saudi Arabia in the 1930s. A 1938 memo describes some of the gear used then by field parties, including a "Heintz and Kaufman" 4-tube TRF receiver, battery operated, and a Collins 32-G transmitter. Might any boatanchor fans be acquainted with these rigs and be able to provide leads to further information about them and even possibly some hardware examples? (This is a personal, not a corporate, project). Thanks.

1905. KWM-2A problem - transmit hangs!?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-28 00:00:00 UTC
From: STEVEN L UMBACH <N9ROU@prodigy.net>
Message-ID: <718qjh$3p76$1@newssvr04-int.news.prodigy.com>
Source record: 96133

I have a Collins KWM2-A winged emblem model that has a minor annoying problem. Sometimes after I release the ppt on my microphone the radio does not go into receive right away. This only happens a small fraction of the time. Instead of going right to receive I hear a loud hashy noise for anywhere from a fraction of a second to a second or two at the most before it goes back to receive. It does not seem to be a relay problem as transmit power always drops to zero as soon as I release the ptt even if it does not go right back to receive and I can hear the relay click right away as I release the ptt. I swapped some tubes in and out of the rig, but it did not seem to eliminate the problem - but there are a lot of tubes in this rig. Any advice on checking a particular tube, resistor, capacitor or other adjustment would be greatly appreciated. Thanks much. --- Steve KK9ZZ

In the Drake rigs, this problem is caused
by heater-cathode leakage in the vox control tube.
I'm not that familiar with the KWM-2, but you
might check it out.
Lots of Drake relays were changed for no good reason.
It was the 6EV7.

If you look at this guys bid history you will see that he bid on his own tester and brought the bid over $100 item#37251707 on ebay. why didn't he put a reserve on it for $100?

From: gharmon@idworld.net
Message-ID: <36385fb6.2541528@news.idworld.net>
Source record: 95910

Very nice Lafayette HE-80 receiver. Covers broadcast through 6 meters. AM/CW/SSB/FM on the dial. Have not cleaned up the radio but seems to work on all bands. Clean chassis and no mods that I see. Needs normal switch and pot routine, maybe tubes, whatever. Excellent cabinet and front panel. The small plain antenna trimmer knob has some scratches on it. All controls seem to work as expected. HE-48 Lafayette speaker. Not sure it matches but it does say Lafayette. I think I have a manual coming. I believe it will clean up to at least a 9, maybe more.

Asking $150 plus shipping. Interesting trades considered but not necessarily accepted. Satisfaction guaranteed.

Thanks and 73,
gary

Source record: 95911

Nice Hallicrafters' SX-110 receiver and matching speaker.

Receiver works on all bands but will need switch and pot cleaning.
Clean chassis. Cabinet nice but has one small crease dent in top.
BNC connector added to rear chassis. Several small pieces of dial
marking have separated, specifically the "7" in 7.1 and end portions
of 80m and 40m bands. Manual. Speaker looks great. No damage and
works fine. $135 plus shipping.

Interesting trades or offers always considered but not necessarily
accepted.

Thanks and 73,

1916. BIG list of HAM TUBES F.S.(updated 10/29/98)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-29 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <19981029083943.23335.00001001@ng-fd2.aol.com>
Source record: 95914

Hello, I have the following Amateur radio tubes for sale. All are NOS
in the original box unless stated otherwise. When possible, (some tubes
can only be tested in curcuit) tubes are tested with a Hickok TV-7D/U.
I have a vast amount of tested, miniature tubes for your recievers,
transmitters, test equipment, etc. at very reasonable prices. Also have
a pretty huge stock of all types of NOS tubes, please inquire about things
not appearing on any of my posts. I'm in the midst of learning how to
set up a website, perhaps in this life :o)... Shipping extra, runs only
3.00 and up, whatever the post office charges...insurance is only a buck
or so, depending on the market value for the particular item(s).
The large transmitter tubes have been checked via ohmmeter.
I will only shipped these fully insured.
Of course, i'll guarantee them to work properly, so PLEASE TEST CAREFULLY
IMMEDIATELY apon arrival, and if it doesn't do what you like, just send it
back right away for a prompt refund,(in original,shipped condition) less return

shipping charges. If defective, I'll absorb initial shipping costs.
Thanks,
if interested, drop me a line... 73's
Joe Pratt, Tubecntral@aol.com

Being as the Titanic is in such cold water, is there a chance that the original key was brass, thus still in shape down there? Also, since it was a spark-gap transmitter, I take it no tubes were involved?
Thank you,
Joe Pratt, Tubecntral@aol.com

Sure, Dave, a TV type would be fine, BUT they were TYPICALLY more in the 250-260V B+ if I recall correctly. So, if you don't need the full shot, as you suggested, then a TV one might just do fine. Try and verify the filament amperage from the TV tube lineup to ensure you are not pushing it too far on that winding.

Jim, FWIW, Heintz & Kaufman were a tube manufacturer during that period and up
through the war. I have some NIB H&K ordinary radio tubes (like 6SQ7), so I
could send you their logo, if that is any interest.

The following is from the ebay guidelines on pricing:

"Third, a seller in a non-reserve price auction may bid on his or her
own item only once. This may happen if a seller starts an auction at a
particular price, and then realizes that he or she wants to keep the
item at a price above that minimum bid. This restriction applies to
sellersï¿½ agents or associates as well. Keep in mind that we can track
multiple bids, and that the bidding history is visible to anyone who
is interested."

See: http://pages.ebay.com/aw/guidelines.html#manip

Need some info!
I have a FT-101E that needs some work. The radio looks like it is new, still has the plastic on the faceplate. It needs the electralitic caps replaced I know, it has a hum. The tubes checked out ok. Is this radio worth putting some time and money into?

Any and all info appreciated.....

Dan kd5blc

IIRC, it was a Marconi magnetic detector.. Considered the most suitable for sea
use of all types available at the time (probably was).
Coherers were unreliable on a moving platform.

1929. FORSALE - MINT Kenwood TS-520S + VFO-520S, great starter rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-29 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <71aapa$dm5@nntpb.cb.lucent.com>
Source record: 95927
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S plus the optional matching remote
VFO-520S that I would like to sell. In my opinion, the 520
and 520S are some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
The remote VFO is a wonderful option to have and gives
the capability to either run split frequencies or to flip-flop
between two frequencies.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $400 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

I believe you'll find that using the GR Bug Hound as a transbolic
inversion replicator is frustrating and time-consuming, given it's
intended function - use in a production test environment to isolate
and/or trace shorted printed circuit board traces...

all the best

Hello Everyone:

Will I finally upgraded my netnews access recently and am quite disappointed in what I've been finding over on this newsgroup. I had hoped to see nice pics of old radio communication equipment, both commercial and ham. What I see is a lot of pictures of vintage Citizens Band radios. Ture this is radio but not quite what I had in mind.

Anyone know of any archives????

73,

Michael, W1RC

That's intersting. Didn't know they made tubes. The guy who wrote this
historical memo was a radio type, so I don't think he'd confuse tubes with
radios. They must have made some radios, too, although I haven't seen any
references in books like Moore's "Communications Receivers". Thanks for
the logo offer. I'll pass on that for now (but may be back :) Thanks
much for your input, Neil.

[== PRC-47: Need source for LSB Mechanical Filter ==]

I have a PRC-47 Military HF tranceiver and would like to do the
mod to transmit on Lower Side Band. It is my understanding that
the stock mechanical filter can be replaced with one that will
put the radio on LSB. If any one knows where to obtain one of these
filters, please let me know!

Also, if there is any other mod that can be done to get LSB, I would
like to know. I have heard that there is a mod that is done
electronically that provides LSB and USB.

I agree with the msg from "dxguy", that mixing any PCB laden oil, a known powerful carcinogen, with motor oil is a criminal federal offense if not disposed of properly. In short, mixing it with motor oil is about the most idiotic suggestion I''ve heard regarding disposal of PCB's. Call the county offices where you live and see if they have a hazmat disposal program for homeowners. Here in NJ almost every county has a twice or three times a year, "a no questions asked, we'll take it off your hands" day. They collect the stuff from private individuals and home owners at a designated collection site. In Morris County, NJ they will take everything from Lead batteries to lead paint, old thermostats with mercury switches and more. Btw, I think the guy who was cited for spraying a road with PCB mixed oil is still breaking rocks in a federal prison. PCB's that were dumped in the Hudson River have taken decades to reach reasonable levels. It's still in the wildlife and the fish 30 years later.

You have made a most excellent find. This is GenRad's primier version of
their transbolic inversion replicators. It is especially good if it still
has the inductive striction emulator in it.

JRob wrote in message ...

True.
I sell PRC-47 LSB filters for $25, postpaid in the U.S.A. These
filters are removed from used 618T transceivers, and check good.
They are physically the same size as the original PRC-47 filter.

>Also, if there is any other mod that can be done to get LSB, I would

>electronically that provides LSB and USB.
I don't believe that is possible if you want to preserve correct
dial calibration.

Source record: 95764
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

After reading quite a few messages identified as "For Sale" items
here the past several weeks (which I had a definite interest in buying),
only to find out that upon opening the message...the item was NOT indeed
"For Sale" (as advertised), but was "For Auction" ("F.A.") to the highest
bidder (on eBay), I've decided to start keeping a list of the deceptive
sellers who insist upon misleading us. The list will come in handy, I
believe, in idenitifying who NOT to buy from, under any circumstances.
My reasoning is that if a seller is going to mislead others in his
advertising of his gear, he's not someone I feel enough trust in to
do any business with him. Period. There seem to be the "regulars"
here who insist upon misleading advertising on a consistent basis,
always listing their items as "For Sale" in the subject lines...
then "pointing" us to their items FOR AUCTION on eBay.

How about some "truth in advertising", guys? Or won't that work
for those of you who insist upon such misleading ads here?

Hi

Will have my 19 set on the air again this November 11th.
This will be the 4th year in a row. Work me on CW on
approx 7.040 MHz and receive a color certificate and QSL
card.

My start time is 1600 Zulu (or GMT)
freq. approx 7.040 MHz

All I need is Call, Name, QTH and RST report.

Take part in the fun of working a vintage radio, built in 1943

Regards
Reed

I use the filter in my newsreader and filter out the author and the
subject, then I will never hear from them again....Thats how I handle ebay
and other pimples on the newsgroups.

1988. Testing 6336A Tubes on a TV-2/B tube tester

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-30 00:00:00 UTC
From: Dennis Gibbs <dgibbs@rational.com>
Message-ID: <3639B876.4196@rational.com>
Source record: 95771
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

Hello everyone,

Is it possible to test 6336A tubes on a TV-2/B tube tester? If so,
what are the proper settings? The settings manual for my TV-2/B
does not list settings for the 6336A tube.....

If it cannot be tested on a TV-2/B, can it be tested on a TV-7/D?
What would the settings be for the 6336A on a TV-7/D?

Thanks in advance,

Dennis Gibbs

Well, you have a very good point here.

I am sure that there are alot of us that consider EBAY postings a waste of time on this newsgroup. I am one of those people.

If EBAY postings are allowed here, why not allow other commercial interests such as AES, Surplus Sales, et al to post their specials and wares here? We wouldn't allow all that clutter...would we?

EBAY postings are nothing more than QRM to me. Don't get me wrong...I like surfing the EBAY postings. But, if I want to see merchandise for sale on EBAY...I go to EBAY (and use their search feature to find appropriate goodies).

If I want to buy direct from the seller with an up-front asking price I look at these Newsgroups. It doesn't make sense to me why we mix the two here (EBAY auction selling and straight Newsgroup selling).

By the way, I am still waiting for EBAY to allow me the privelege of posting my Newsgroup wares on their Website... can't do it! I guess they think that it would clutter-up their site and waste the time of their users. Sound familiar?

Casey,

>>Anyone using a CMOS III to key a grid-block rig like this? I suspect there is some additional circuitry I'm going to have to supply?<<

It was years ago, and I forgot the rig, but we had to build a relay driver for the keyer to actually key the rig from the keyer. It was kind of limited to speed, too. If you got much above 20WPM it would rattle. Perhaps a diode switched arrangement would work well in this situation?

Good Luck!

I can't help but think that you guys whine about some of the most petty things. Are you guys in a union or something? The next thing you know we will all be hearing from you that anybody that uses eBay is a scab. I'm not a big fan of eBay, but I am starting to think that you guys have an emotional problem with regard to eBay. I mean, if I get so angry at something that I start making a list, then I know I am in need of some help. Anger takes a lot out of a person, and to me eBay is not worth it.

Excellent idea, Bill.
Don't buy anything when the advertising is misleading.
But then you'll have to include everything advertised on TV,
or a billboard, or in the newspaper. You won't be buying much....
You'll feel better if you just push the "next" button on your browser.

I am also getting absolutely annoyed by posts that have "FS" in the subject but are nothing more than links to eBay auctions. The guy with the "mint SX-99" was the worst, spamming this group every day that the item was up for auction.

I have no objection to legitimate "FS" posts here, though.

It's not a matter of whether anyone is a "fan" or not of eBay; it's simply
a matter of not being deceptive, and having some consideration for others.

OK. $1100 is toooooo much for my most excellent WE 51S1. So here is a repost for $975, UPS prepaid, Versapacked, conus. It is a good unit, works well, no dings or dents, All knobs are there and unbroken, PTO could use an endpoint adjustment, and the case has been re-painted (not a bad job--but not original). Trim ring (not repainted) has a few scratches and minor nicks. Front panel (pebble gray area) has a couple of shiny spots just below the AF gain Control and the RF gain Control. JPEGs on request. Interior is in good shape with some dust, no corrosion. Has the tall feet on the front. I have a third generation copy of the manual and yes, it comes with a power cord.

Thank you for the read es 73

That's the point (and the only point).

Simple, accurate identification of messages (in the "Subject Line") is all it takes, yet this appears to be too much to ask of some who would rather "deceive" others into reading their "F.A." ads.

...and how do you know whether you should push the "next" button on your
browser when you're interested in buying an item that appears to be for
sale in the "Subject Line" of a message...until you open the message and
read it...only to find out it's not really for sale...it's for auction?

> The issue's been done to death and has been long settled.

Sure doesn't appear (upon reading the "For Sale" ads lately) to have been "settled" at all, Dave.

> Bill-- I support methods of reminding people to
> be courteous and use FA or EBAY in their listing.
> You've got a good idea there.
> I'd just hate to see "I hate/love Ebay"
> get started here again.

My only point is that it's deceptive to advertise an item "For Sale" that turns out (upon reading the content of the message) that it's not at all "For Sale"....it's "For Auction". A simple "FS" or "FA" in the message "Subject line" is all that's needed. Most sellers have the honesty and courteousness to already do this.

Hi Marv,

this relates to the logo used on the equipment. The old logo was
the "winged" emblem, followed by the "round" emblem or "meatball"
about 1967 and changed again to the "Rockwell Collins" logo after
the take over in 1972. In general the later units are preferred
to the earlier ones, therefore "round" is more expensive. Most
expensive is gear with the "Rockwell Collins" emblem. Only very
few models in small quantities were produced.

Source record: 95803

There are two different emblems on the vintage Collins gear. Units produced before the sale to Rockwell had a "winged" emblem which appears in the center of the front panel of KWM-2, 75Sx, 30L1, etc. The neweremblem is a "round" one.

Because they are a little more recent, sometimes the round ones command a slightly higher price, although some of the die-hard collectors favor the winged emblem units.

Bill, all I can say is that I disagree with your assessment that anyone who places a for sale post in the newsgroup without having the word "eBay" or "Aution" in the subject field is being deceptive and has no consideration for others. People come and go from this news group all the time. Not everyone is going to know these ever changing rules all the time. Too many times I see people get flamed from other people because they just didn't know. I can see how you might feel about a person doing this who should know better, but a blanket rule that all who do this are being deceptive is just a little too much.

This doesn't sound like something that would appear in 73 in recent years,
and I don't recall seeing anything like it there.

But there was something in Communications Quarterly somewhere in the past
couple of years, about some surplus SSB rig that just might be what you
are thinking of. I don't have the article and I don't remember anything
more than that there was something like this.

This sounds like an interesting project. I now regret giving away my copy of the book years ago, with the belief that I didn't need it any more and it would help someone else get involved. I just got a copy of my first handbook earlier this year, having given it away the first copy a long time ago. The second copy is in much better shape than the one I gave away.

I think, though, that you will find very little variation of the projects in the book over the years. I think the copy I got in 1971 had a transistor regen receiver (I'm not sure absolutely, it's been a long time), but a single tube transmitter built breadboard style. The transmitter probably would have fit well back in the 1950's, at least, and I would think there was only minor variation (such as tube type) between it and what was shown in earlier editions of the book.

But it would be interesting to see how the information charts out once you've collected it.

> at auction?

If your intent was to sell it for $40.00 (and not incite the inevitable bidding war at eBay that would only inflate the price higher), why didn't you just put it up for sale for $40.00 at rec.radio.swap, and found your buyer that way...? Do you really think that one guy is just going to bid $40.00 and everyone else is going to roll over and die and let him have it for that? Why did you even put it up at eBay if you have already determined what your asking price is? "$40.00 at auction" is a meaningless contradictory statement.

Not to mention that anything Icom is off-topic in this newsgroup...

Umm... I have an HQ-180 that has a hinged lid -- did someone swap
cabinets on me before I bought this?

I have a tube rectifier in mine... no clock... no separate filament
transformer for the HFO... the front panel says "HQ-180" without an
"A"... but I have a hinged lid...

This is a pretty sad case.......

Someone took this Collins 51S-1 WE receiver and performed an irreversable modification - removing the rejection tuning circuitry and adding a tunable BFO. He also removed the RCA jacks on the rear apron and replaced it with a terminal strip. The meter switch also has been re-wired for another function. There is a miniature toggle switch neatly mounted in the panel where the winged emblem goes that is a switchable AGC. Why this was done is totally beyond me. The workmanship is, however, of the highest quality - very surprising! I can only guess that it may have been done to customize the radio for a particular purpose unknown to me. I surmise that it may have been done to enhance and improve the CW reception capabilities of this fine receiver.

More hacks: The meter is not the original but a nice Simpson modern face meter that fits perfectly into the panel hole. Original meters are available from SSN for around $90.00. There is no cabinet and the trim ring is pretty rough. The front panel has two wear spots near the ON/OFF switch but otherwise the front panel is okay. Finally the "51S-1" tag on the front escutcheon is missing.
There is an original manual of sorts but it has been badly marked up, probably by the person who modified this radio. I will also include a photocopy of the original 51S-1 manual.

Electrically it seems fine. The chassis is quite clean.

I am asking $750.00 plus UPS for this radio. If interested please reply by e-mail.

Isn't $750.00 for "a pretty sad case" kind of pricey, even for an S-line receiver?

My ISP didn't carry it, but an E-mail about once a week asking them to add it eventually got it done. ISP's are busy and are profit-oriented, so unless you are a squeeky wheel they will use their time and resources elsewhere. You are paying for access through them and you can always move to an ISP who will provide customer service, and they know it ... let them know you are serious.

I'm sure Linear Tech have an app note for the device you mention. From what
I remember their app note for the 1074 was particularly thorough.

Regards,
Mike.

> much.

I agree with what you've said above. There are always going to be those
who "simply didn't know", and had no intention whatsoever to deceive.

Those I'm referring to should (and do) know better.
To quote one "regular" who consistently refuses to identify anything in
his "Subject line" as being "For Auction"...he replied to a polite e-mail
request today that he kindly do so with the following words:

"I make my living on eBay from the hicks who don't know any better".
"If they're stupid enough to pay as they do, I'll sucker them over there
any way I can". "Those of you who don't like it can go to hell".

That, from a "fellow hobbyist" amongst us who "points" us (on a regular basis)
to his "rare items" on eBay in his messages here.

You know you're a ham when...

a. You find yourself mentally undressing your rig.

b. You'd rather turn on your rig instead of your other 1/2.

c. Your definition of high fashion is a baseball cap with your call letters on it.

d. Your shack actually begins to look like one.

e. At a party, after you've told a joke, you say "hi hi".

f. You're happy to be considered just another bean for the pot.

g. Your idea of sightseeing is checking rooftops for antennas.

h. You check for your packet messages before you check your answering machine.

i. You think carrying an HT is more of a status symbol than a portable cellular phone.

j. You have the need to explain to someone that being a ham is not the same as being a CBer.

And remember, keep a joke in your heart and a hand in your pants and you'll always have a smile on your face.

I've about given-up on trying to use rec.radio.swap for
either buying or selling boatanchors. There's just
way too much other stuff in there. Most of the ham
ads get buried in people trying to unload obsolete
land mobile stuff.

rec.radio.swap.amateur doesn't work on most ISPs.
Does anyone else feel this way?
Should we mass-mail the major ISPs and tell them
to start carrying rec.radio.swap.amateur,
or which ever it was?

A couple of months ago I posted a message requesting information on a RF Communications HF SSB Transeiver that I had just picked up. There was a gentleman that worked at RF Harris that thought he could find a manual from the company archives. He was going to look for it and see if he could get me a copy. I have since lost his email address and would like to recontact him or anybody that might help me locate a manual for this unit. It is the SB-6FA and its antenna tuner. My unit uses 6146's as finals. Can anyone out there help me Thanks Don KB6GQA

2060. HELP I.D. This Hallicrafters speaker??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-30 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <19981030182349.25060.00002286@ng-fi1.aol.com>
Source record: 95890

I have a Hallicrafters speaker and I haven't got any idea what it is. It is LARGE, wooden cabinet, about 2 1/2 feet high, maybe 2 feet wide and 2 feet deep. The wood is reddish in color, Theres a round fromt cutout with the lower case h Hallicrafters logo and lower down is a rectangular cutout. Theres a terminal block on the back with 16 leads (slotted screw heads). I haven't opened up the back, so I don't know if there's a transformer in there or not. The speaker appears to be intact and can be seen through the screen covering it. The screen looks like the type used for your back door screen. I dont have Chuck Dachais's book of Hallicrafters stuff, so I don't know if this thing is covered in there or not.
If you know what this is, or what it is supposed to be matched up to, I would like to know. I have a very nice SX28a that is begging to be hooked up to it. I can be emailed at: nc183d@aol.com
Thanks for your help again, folks...

2065. Re: FT-101E

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-30 00:00:00 UTC
From: Edward Plotzker <edplotzker@pol.net>
Message-ID: <363A5517.5AB8F13B@pol.net>
Source record: 95895

Any radio is worth investing time to restore. As I read your note I was not sure if your were selling or just wanted information in the form of encouragement. FT101 in its day was a hybrid radio (tube & solid state). It was popular and came in several models. They varied depending on vintage and presence of a voice processor. Older models had the 11 mtr band. Personally I would like to get a hold of one to restore. Presently I restore Galaxy radios for my own personal satisfaction. Let me know.

From: Richard Suhar PE <rsuhar@netcarrier.net>
Message-ID: <363A632A.362E@netcarrier.net>
Source record: 95897

I use a Heathkit HD series keyer to run my 2NT. Never had any problems keying it. The HD will operate either grid block or + keying lines. For some positive rigs like the Ten Tecs a mod had to be made to provide a very low resistance path. However with the grid block keying you will not get a direct application.

Partilly homebrew cabinet built on commercial chassis,
originally used for single 813 linear.
Has large round panel meter, rocker switches and front panel holes for
bandswitch, tuning cap and loading cap.

Also have two 813's, 10V 10 A filament xfmr,
tank coil for 20 thru 10, loading & tuning variable caps,
doorknob caps, chassis fan & one 813 socket.

Also 6 PS electrolytic filter caps & rectifier tripler module.

Linear was disassembled about 15 years ago, so I can't guarantee the filter
caps condiiton.

Will sell above as a package or individual parts.

Make offer....Vic WA2JIW

2076. Re: What Is "Winged Emblem"?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-30 00:00:00 UTC
From: k6hm <k6hm@wenet.net>
Message-ID: <363A978B.7B3B8FC9@wenet.net>
Source record: 95906

Hello Marv,
The Collins emblem attached to the front panel has two versions, one is the wing emblem, round meat ball in the center with one wing each side as you can see it on 1967 or earlier models but in 1968 Collins drop the wings and kept just the round meat ball emblem, the size of the meat ball is enlarged slightly. There are various new improvements on meat ball type, which is also called round emblem, depend on the year they were manufactured so round emblem usually fetches more money. But generally speaking, 1967 models usually have the same revision of the round emblem models. There were few units with Rockwell Collins emblems for post 1975 models and even some Japanese assembled units. But the QTY is rather small. The KWM2A made after 1973-1974 has the main dial knob plastic brake under the knob to lock the frequency. Most of the round emblem KWM2A use rectangular shape FA type mechnical filters compare to the earlier models which use round shape Y type filters. I have never seen any failures with Y type filters but many failures with FA type filters.
Best luck to you.

In a previous article, mwluse@dimensional.com (Marv Luse) says:

>
>I notice that posts for Collins equipment frequently mention that they
>are "winged emblem" and was wondering what that meant.
>

Basically, it has to do with whether the equipment was made before or
after Rockwell acquired Collins. The "winged emblem" I believe is before
the acquisition.

> 73 from
> Don Vlack K2DV

Simple. With Straight selling, the seller sets a price and you get to
bargain
him DOWN 1 on 1 until you get a really good deal.

In an auction, there are lots of people competing. You get to bid the price

UP. There's no opportunity to bad-mouth the item and get a good deal.
So in the feeding frenzy you pay at least the going price and probably much
more.

People who like to take advantage of the seller to get the deal of the
century
are not happy with auctions.

If you don't like auctions, don't bid. Nobody is forcing us.

Source record: 95724

I've bought and sold on eBay. I have gotten many fair deals there. The name of the game is to bid the most you'll be willing to pay. If you don't get it, oh well. It is true, however, there are many people paying a lot of money for stuff they could buy elsewhere for less. For example, I bought a Telephone Interconnect at a hamfest. I paid $35.00 for it. After I bought my new repeater controller, I decided to get rid of the phone patch I bought. I had never hooked it up. It just sat in the box. I put it on auction at eBay, and I was paid $122.50 for it! I have checked them out at hamfests and I never see them going for more than $50.00. I am sure that eBay is a seller's paradise, but there is no reason it shouldn't be a buyer's paradise either. I find lots of great deals on there. The only thing is, and I must say this cautiously, eBay can be very addictive. If you get involved over there, be very careful. I have gotten carried away in the past on there and it isn't fun. You sit there worrying about whether or not you are going to be able to pay off all the items you bid on if you don't get outbidden. So my message to anyone planning on getting on eBay is "BE CAREFUL!!!"

What difference does it make whether something is "for sale" or "for
auction"? You send in your offer and you either get it or you don't,
and you may or may not get another chance to increase your offer.
Other than the logistics, it's the same thing. Deal with it.

Difference is, when a seller asks a fixed price for something,
an interested buyer can buy the item for the seller's "asking price",
or (attempt to) negotiate a price mutually agreeable to both parties.

Seldom is a seller's "asking price" negotiated "upward" by the buyer
to a higher price...except perhaps in an auction. <g> Deal with it.

Try replacing the electrolytics and the coupling capacitors, then realign.

If that doesn't work, check for bias resistors that are out of tolarence due to heat.

From: KC2WE@aol.COM
Message-ID: <feb89b5d.363b278a@aol.com>
Source record: 95836

Does anyone have any source or price info on the 8116 final tube (looks like a 5894) used in the AM-3007? Is there a substitute or has anyone modified one of these amps? It was part of the RT-618/URC set and other sets made by Harris and similar vendors. Is anyone using one of these AM-3007's or done any mods ? Besides the 8116, I think that there is a driver tube in the AM-3007 which I need info about too, but have no number.

Tnx in advance,

> an auction? I think I'm missing what must be a subtle distinction.

The most "not-so-subtle" distinction is that in an "outright sale", a buyer most often is made aware of the seller's specific and exact expectations, "up-front", and can thereby make the buying decision (or possibly negotiate a mutually agreeable price). The seller in an outright transaction is the "ultimate arbitrator". In an auction, the buyers become the "ultimate arbitrators", determining final sales price based upon competitive bidding (against one-another).

In most auctions, there is a "middleman" involved...someone who does the auctioning (provides the "marketplace" in which the auction is held), earning a percentage of the "final (high-bid) sales price" for providing their services. This amount is either paid (to the auctioneer) by a subtraction of an agreed-upon percentage from the dollar amount (yield) to the seller, or from an "upfront" fee charged to all bidders (buyers) in the form of either an "entrance fee" or "bidding fee". Sometimes a combination of both methods are used to renumerate the auctioneer.

There are other differences between outright sales and auctions, including the "emotional" aspects of both types of transactions. Such differences may be quite evident, or manifest themselves in much more subtle manners.

2126. HCRA Auction - Feeding Hills, MA - November 6th.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-31 00:00:00 UTC
From: Jim Mullen <jmullen@map.com>
Message-ID: <363b34ed.0@news.map.com>
Source record: 95840

Hi everyone. If you're anywhere near Feeding Hills, MA on November 6th, stop by the annual Hampden County Radio Association's auction. Come to buy, come to sell, all are welcome. Usually a good place to pick up old stuff at good prices.

Sellers donate 10% of selling price (up to $10 maximum) to the club. And of course, what does not sell must go back home!

Date: November 6th, 1998
Time: Auction Starts at 7:30 PM
Location:
Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030
Talk-in: 147.105 repeater.

Thanks for taking the time to read this. Hope to see you at the auction!

Further information available from:

Jim Mullen - WA1ZUH
144 Tower Hill Road
Brimfield, MA 01010
(413-245-3228

Please don't say you still don't know the differance! That is the best Daffynishion I've heard. Many people don't like the bate and switch, I don't like the auctions that much, I will go to auctions locally but don't like the e-bay auction, why? Because I've bid fair prices before and never got the bid, or find there is a minimum bid after bidding. I scan the newsgroup looking for items that are for sale, find somthing I might be interested in only to find it is not really FS but FA, what a deception! (Something I can live find without)

2131. Chirp in HW-16

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-10-31 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19981031123424.21940.00001847@ng15.aol.com>
Source record: 95845

My HW-16 has developed a chirp, noticable on 80m, annoying on 40m,
objectionable on 15m. It was a sudden development, ie, began one day on
power-up. The receiver is stable. There is no power supply hum on the signal.
In chasing this down, I have so far tried the following:
different xtals, in case one was sluggish
different 6CL6 osc tubes
wiring from the xtal sockets to the osc tube
all resistors and caps at the base of the osc tube
use the HG-10 vfo as alternate osc source, still chirps
replace C201 in the grid-block bias supply
replace C203 and C202 in the B+, along with their voltage divider, R204

Next step is to use the Dremel to cut out the 4-section C204. but I don't
expect that this is it. Anyone see what I am missing on this?

Suggestions appreciated!

KMB

Dennis Gibbs wrote:

> Is it possible to test 6336A tubes on a TV-2/B tube tester? If so,

The 6336 draws FIVE AMPS of filament current, so unless the filament winding can handle 30 watts, I wouldn't even plug it in there. If you REALLY wanted to do it, buy a tester socket from Fair Radio for $2, and you could apply filament current from an external source. My guess is that you could test each side as if it were a 6AS7 or 6080, and maybe learn something that way.

Source record: 95855

I have four Army Signal Corp Training Manuals for sale. All four are in good condition with sound bindings but with yellow pages and minor tears to a couple of the covers. The manuals are from training at the US Army Central Signal Corp School at Camp Crowder, MO in 1943 on the following WW-II radio equipment:

SCR-508, SCR-509, SCR-510 SCR-528, SCR-538, SCR-608, SCR-609,
SCR-610, SCR-628
BC-603, BC-604, BC-605, BC-683, BC-684

I would like to sell all 4 manuals as a package for $20. The buyer will need to pay shipping.

My email address is: EJHotaling@aol.com.

Best Regards.
Eric Hotaling

```
For Sale:
(Add shipping costs to all prices)

BC-1033-B VHF receiver w/relay (needs 3 tubes) $15.00

1981 ARRL Handbook, excellent condition $15.00

Hallicrafters Manuals:
HT-46 $8.00 each (1 repro only)
SX-146 $8.00 each (1 repro only)

Naval Electronics HT Audio Booster model HTS-3 new, with
manual. Has auto tape recorder control, on/off switch, and runs
on either four $$ batteries or AC power pack $25.00

Military Surplus keyer, model F16-K-49161-1001.
Interesting boatanchor what's-it - Keyer/selector/amplifier
assembly, with eleven miniature tubes on a small chassis
approx 6" X 9" x 3". Has Chicago Transformer output
transformer Class 1A, some 400V capacitors.
Tubes are types - OA2, 6AQ5 (2), 6AL5, 12AX7 and 12AU7.
Most of the tubes are there... a couple are missing.
Looks like it was remote controlled. Several potentiometers,
a lamp jack? (991) and switch etc. Approx 1955 vintage.
Also has a storage tag mentioning 1961. $15

Hallicrafters HA-8 Splatter Guard modulation monitor
with copy of instructions. Needs simple pick-up added (3 parts)
for tapping RF line through SO-239 T-adapter. $40.00 (SOLD)

POWER ONE Power Supply Model HC5-6/OVP-A
5 Volts DC at 6 Amps. Heavy Duty construction.
Adjustable voltage and also adjustable current limit
controls. Requires 100/120/200/230-240 V AC
Over-voltage protection. Less than 5 mV ripple.
0.3% stability or better. 0-50 degrees C.
Military spec construction. With connection data and
service data. List price $125.00
Will sell for $25.00

Two BAKELITE clock radios as follows:
(Great project radio!)
G.E. Model 535 (Uses the 12BA6, 35W4 tubes etc.)
Dark brown color.
Appearance good - untested - $10.00
```

G.E. Musaphonic, model 590 - with phono input etc.
Superheterodyne, uses 12AU6, 12AV6 tubes etc.
Dark brown color.
Appearance good - untested - $10.00 (SOLD)

BALLAST TUBE TYPE B (variable) Octal, black $5.00

Maxtor Hard disk drive model 7120AT Capacity 120 MB
In excellent condition. NOW ONLY $20.00

ST-225 MFM Hard Drive 20 Meg Now only $10.00
ST-251 RLL Hard Drive 30 Meg Now only $10.00
MFM Controller card with cable (Free with drive)

More books:
Television For Radiomen, by Ed Noll. 340 pages, illustrated
1962. Front cover torn a little but otherwise very good $6.00

Perhaps I'm disqualififed from
talking about the "good old
days" (I'm less than 60 years
old, never had a QSO with
HPM, and got my license as one
of those newfangled
Conditionals.

My "good old days" started in
the early 60's, just 35 years
ago, but here is what I
remember.

.... hams didn't bicker with
each other about who was more
"deserving" than another.
Nobody got a special deal
because
they could beep faster or
remember more electrical
formulae
than someone else. I got my
Extra in 1963, well before
disincentive licensing, and it
was simply just another
personal
accomplishment, and did not
"elevate" me above other hams.
We
all shared the same spectrum,
worked together to solve the
same
problems, competed in
contests, trouble-shot each
others radios,
and generally had fun
together. If you forgot the
numbers for
the dipole formula, it was OK
to ask someone else. If your
Morse speed was 10WPM the
speedier guys would slow down
for you,

not QSY to some specially
reserved band segment. The
one or two
"old timers" on 75 meters who
didn't like newcomers ("No
lids, no
kids, not space cadets") were
universally looked down on as
poor
examples of what a ham ought
to act like. The Novice bands
were
a "cacaphony of exhuberance"
to steal a term that K1ZZ used
in
a meeting yesterday here in
Minneapolis. Old hands were on
those
Novice bands also -- it was
not unusual to hear W4KFC or
W5ZD
patiently working WN4KKN or
WV2CNL -- nobody remarked that
it
was "nice" of them to do
that -- it was just part of
being a
good ham. The notion that you
had "earned" your license
never
occured to anyone -- we were
just excitedly "playing in the
ether", and there was no
distinction on the air between
Extra,
Advanced, General, or
Conditional -- elitist special
callsign
formats to celebrate the fine
granulations of your testing
skills
had not been invented.

Today we are sliced and diced
into 6 different classes,
carefully
divided into our own special
frequency segments, and Lord
protect
the Extra who suggests that a

new Technician, who didn't
pass his
exam in front of a bored and
stern FCC clerk, might have
something
to contribute to our beloved
Amateur Radio service.

I respectfully propose that
all current six license
classes be
scrapped and replaced by two
new classes "Beginner", and
"Helper
of Beginners".

>KB3PT

An "asking price" can be negotiated upward any time. It happens often in the real estate business when the buyer wants to be SURE his offer is accepted. No reason it can't happen elsewhere too. If you REALLY want the item, offer a couple bucks more than the asking price. As soon as the seller recovers from the shock, it's yours. :-)

Source record: 95665

Hi all,

I'm fairly new to this newsgroup, and I'm hoping someone can tell me of the history and value of this set I've inherited. I've been following the recent discussion on the Titanic, and was wondering if this set might be of the same vintage.

It has 5 switchable bands:

A 100-2600 kilocycles
B 2600-4400
C 4500-7500
D 7500-12500
E 13000-22000

Tube compliment:

4-1620
1-6J7
1-6K7
1-85
1-6F6G

It's in great shape, but requires an external power supply (which I don't have). I do have the umbilical cord with plug that attaches to knurled screws on the back of the set, all labeled... B+ etc.

I also have the original headphones with the cloth covered wire and 1/4 inch jack labeled... "Cannon Ball Dixie".

I'm attaching a photo as well (is this appropriate?). Any observations that anyone can make would be most appreciated.

Best wishes,
Andrew Huculak

Hi Andrew,
Not even close to the same vintage! Too bad. The tube line up in your
set is more like 1936-39 or so. Pix looks like Canadian Marconi gear I
have seen. BTW, digital pix on most Newsgroups are not considered good
usage. The binary groups are a good place to post pix, or an offer to
e-mail a pix for ID is always a good idea.
Sorry I couldn't give you better news, Craig

Rose colored glasses? I remember a net called Westcars (West coast amateur radio service) that operated in CA in the early 60's. It was on the same 40 meter freq day in day out and arranged mobile and phone patch traffic. The malicious interference and bickering that went on rivals what you hear today.

Bonjour,

Je recherche la doc technique du TS 940 SAT ainsi que les sh&#65533;mas &#65533;lectroniques associ&#65533;s car j'ai un petit probl&#65533;me avec le mien : &#65533; la mise en fonctionnement, seuls les points s'affichent sur le fr&#65533;quencem&#65533;tre et je n'ai ni &#65533;mission, ni r&#65533;ception. ce n'est qu'apr&#65533;s un certain temps (variable) que tout (?) rentre dans l'ordre pour un autre certain temps (variable aussi)...

Si vous avez entendu parl&#65533; de ce probl&#65533;me ou si vous connaissez la solution ou encore si vous pouvez le d&#65533;panner, je suis preneur car mes connaissances dans ce type d'appareil sont plus que basiques...

Personally, I am amazed that anybody buys anything on ebay, but they do. An Icom 2100H, used, without warranty had bidding going over $255, shipping is extra. Considering you can get the radio new at AES for $199, this is unusual behavior indeed.

In another instance, a Drake L7, without tubes had bidding going for over $800. Add $300 for a set of tubes, and you have a total price that is about 45% higher than market value.

Ebay must be a seller's paradise! As for buyers, I don't have enough money to pay above market value, hi.

This unit is in very good condition.All original and in working order.Cosmetically all original.The only problem is around the key lock and handle on the door of the P.S. where a little bit of the paint has flaked off.On a scale of 1 to 10 I would say this is a 9.The insides are very clean.The serial number is 1384.it comes with the original manual,blower hose,collins relay,and some wiring.The front panel is in excellent shape.Asking $1950.
I'm in No.Calif.
Thanks
Robert Ramirez

Wanted: copy of schematic for a Heath scope. On the front, it's marked "Bell and Howell Schools" and "Solid State Oscilloscope, Triggered Sweep, 5MHz Bandwidth", and on the back it has the usual Heath sticker with "Model 10D - 203 -31". I think it qualifies as a boatanchor -- it has a vacuum tube and it sure is heavy!

Many thanks!
Marty, K3PBU

Knowing how the FCC works, your statement is kind of humorous.

The FCC endorses the ARRL proposals. The ARRL showed them
that incentive licensing was the way to go, and the FCC rubber stamped
it. The same with the Spread Spectrum rules. The ARRL wrote them,
the FCC rubber stamped them, it is now law.

The ARRL is writing new rules for 5 wpm General (seeing how they are
dying off faster than people are upgrading) and the FCC will rubber stamp
that as well. The ARS is not that important a service for the FCC to
staff and spend real money on.

If Joe Blow petitions the FCC, his proposal is stamped "premature." If the
ARRL send in the same proposal, it is made the law. It's not that the ARRL
is any better/smarter than Joe Blow, it's just a way of doing business
cheaply.

To say otherwise is just ignoring the facts.

Greetings Jay.
I'd like to have a B&W GDO, but think I'd have hard times finding a coil set for it. I have a Eico that was only 35 complete with coils and book, and I'd be prepared to offer the same for the B&W, anticipating a long wait to find out if it works properly.
I mean no offense, but have some projects on shelves already that are awaiting parts that haven't surfaced in years.
Best wishes !

Not quite a SX-88, but - -

Recently I was very lucky to finally
find a EPROM programmer.

I now am the proud owner of a
Heath ID-4801 that came without
any documentation whatsoever.

Anyone out there familiar with
this thing that looks not unlike
the line of trainers and such
that Heath marketed?

Any help at all is most welcome,
especially a manual or copy, or
even a copy of the catalog page
that described this jewel.

Source record: 95568

Greetings,

Last summer I got a nice R-388 and a mint 75A-4 so the old
75A-2 has been unused for a few months. I would like to pass it along.

The 75A-2 is working and its pretty clean. The kilocycle dial has
been burnt by the lamp and there is a wrong size knob on the AF gain
pot. The knob looks the same as all the other original knobs, just a
little
to small. The cabinet has been lightly sprayed with grey primer but
the wrinkle has not been filled. The front panel is very clean.

It has a Heathkit 100kc calibrator and the 148C-1 NBFM adapter.
I also have a Sams photofact on it.

I'm asking $375 plus ups from 44134. (cleveland,oh.) I am
guessing the thing wieghs about 60 lb.

Thanks, Dan N8ETQ dharlan@ameritech.net

I just had a QSO with W5VMJ, Stan, who was looking for a source of dial cord to repair his receiver an I remembered a couple of sources for this item. The first source is Radio Shack. They have a dial cord repair kit , part #274-435. I used this to replace the drum cord on my NC303. It is a very strong cord and works well.
The other source is any good marine or boat store that carries rope and rigging gear. Ask for "whipping line". This is a very small braided cotton or polyester line for wrapping the ends of cut rope to keep it from fraying. It comes in several sizes and it does not stretch.

You weren't listening, Steve, so I'll say it again:

Just a reminder - in 1959, the FCC published a Notice of Inquiry asking what incentives could be tacked on to the Extra Class license. They received thousands of comments. We periodically read of folks criticizing the ARRL for "...hurting amateur radio with their incentive scheme..." but it was really the FCC itself that planted the idea in the first place.

From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <71l8k4$385$1@supernews.com>
Source record: 95582

I just got a Hallicrafters S-38. Have never seen inside one of these, so please pardon if this is a stupid question.

Floating loose inside the cabinet were three chunks of what resembles wallboard. They formed an insulated box around roughly the left half of the radio as viewed from the rear. The radio is so dirty that it's hard to tell, but it looks like two of them may have been glued to the top and side of the cabinet.

-- Do these things belong there? Seems odd to put anything in a radio to make it run *hotter*, but what do I know. The pieces are cut rather crudely. I suppose it's possible that someone stuck them in to prevent the top of the metal cabinet from getting uncomfortable to the touch . . .

-- If they do belong, are they asbestos? I'm not the Chicken Little type, but if something does contain asbestos, I like to seal it off.

My personal email currently isn't working (local ISP got acquired by a national chain -- grrr), so please reply to the group.

Thanks!

Phil

Source record: 95587

You might have seen a previous version of this, but I have a couple dozen Janeil SP-2000 Stereo Processors for sale. They are brand new.

They are going cheap!... my wife wants them out of the garage. I started out with about 100 units and am down to nearly 30, but there still isn't room for them and our cars.

$20 dollars plus shipping. Shipping most places in the U.S. runs about $10....Canada runs about $15.

I put the specs/manual for the Janeil online at:
http://www.timp.net/janeil
Here's what it does:
The SP2000 is a digital readout audio processor that connects to the BASEBAND output of a (mono) satellite receiver and will give you full stereo reception of not only TV feeds, but also a wide variety of stereo audio services, as well as mono ones. These include the BBC world service radio, and other international broadcasters, background music, major radio stations from all over the country, network radio stations, talk shows, and even reading services for the blind. This device makes possible reception of wide and narrow audio sub-carriers with even the most primitive satellite receiver.
Also, some people use the Janeil to give them multiple audio services if they already have a stereo receiver.

Janeil is no longer in business, but the units are brand new and never been opened.

If you would like one, please e-mail me or send a check to the following address.

Thank you for your time... Alan Neves

Be nice if the radio had been in the pile as well!
FS: SRS type SR-1602 remote control box. This is the mobile version of
the remote for the Scientific Radio model SR-206 and SR-210 sets
Also have the manuals for the remote and the radios. This set
also carried military designation of RT-1033/URC-77.
The remote is new//perfect condition, both manuals are in exc
condition--dated 1974.
This has got to be rare--looking for offers in the $100+ area for all
three pieces.
Thanks, Craig

From: Tim Cook <timcook@erinet.com>
Message-ID: <71lrvk$3jr$1@nntp.erinet.com>
Source record: 95593

Have to help finance more Ten Tec purchases, so I am selling my Ten Tec Argonaut 509 and matching 208 cw filter. It is about a 6 or 7 on a scale of 10. Has a couple of marks on the top left front, and a nick out of the black plactic bezel around the dial. It is not mint, but really not bad looking either. However, it works perfect!! the dial string doesn't sag at the left end like most ten tec analog radios do. The PTO is smooth and was factory rebuilt in feb or mar of this year. They also replaced the finals, and completely realigned the radio. I have the receipt for $132.00 worth of work. comes with a nice copy of the manual in a loose leaf biner in plastic sheets. I will sell the radio and filter for $250 and ship it for that in the conus.

Thanks
Tim

Looks pre WW2, or early WW2. The next genereation reciever would be the CSR5, a low frequencey/general coverage set used exetensively in the Royal Canadian Navy. You might want to check out the HMCS Haida website, as there is lots of pictures of Marconi stuff there - some chaps in Toronto are restoring the radio rooms on the ship, and have a great collection.

Source record: 95695

Oh oh - I feel a flame storm coming on!

Basically, Incentive Licensing was developed as a way to encourage hams to enter the hobby at an easy-to-obtain level (novice), and then steadily increase their skills and knowlege as they went along. As an "incentive" to upgrade, they would be given additional operating priveleges as they moved up in license.

This is all fine and good, except some previous license holders had to give up priveliges to make it all work. And as Shakespeare said "And there's the rub".

This has been controversial since the 60s, and some people just won't let it die. They curse the ARRL, the FCC, the Democrats, the Republicans, and whoever else they can blame.

And, now that the ARRL wants to change things again - WATCH OUT! I think we are on the verge of another 30 years of heated discussion on 75 meters!

I hope this clarifies things just a little bit for you!

WB2JGH

P.S. Ok ok all you old-timers, let me have it!

Source record: 95698

Until incentive licensing all you needed was a General class ticket to have privileges for all the available ham frequencies. Up to that point getting an extra was just a status symbol saying you were better than the rest but it did not buy you additional privileges. When incentive licensing came around it did take privileges away from the General class, specifically the first 25 KHz of the lower end of each CW band. As at the time I liked to chase DX on CW and this was a real blow. Anyway I succumbed, and got my extra back in 1975, so now I hope I do not have to worry about it any more. BTW additional phone segments were also allocated to advanced and extra class holders so the generals were left out unless they upgraded. 73 - Mike

2264. HCRA Auction - Feeding Hills, MA - November 6th

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-03 00:00:00 UTC
From: Jim Mullen <jmullen@map.com>
Message-ID: <363e9bd0.0@news.map.com>
Source record: 95509

Hi everyone. If you're anywhere near Feeding Hills, MA on November 6th, stop by the annual Hampden County Radio Association's auction. Come to buy, come to sell, all are welcome. Usually a good place to pick up old stuff at good prices.

Sellers donate 10% of selling price (up to $10 maximum) to the club. And of course, what does not sell must go back home!

Date: November 6th, 1998
Time: Auction Starts at 7:30 PM
Location:
Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030
Talk-in: 147.105 repeater.

You need not be an HCRA member to either buy or sell, but if you would like to join the fastest growing amateur radio club in the valley, you can do so at the auction for only $10!

Also, Tom Frenaye, K1KI and Bill Voedisch, W1UD from the ARRL will be giving a short presentation just before the auction

Thanks for taking the time to read this. Hope to see you at the auction!

Further information available from:

Jim Mullen - WA1ZUH
144 Tower Hill Road
Brimfield, MA 01010

I have an excellent condition unmodified AM-6154. I have all the
modification info needed to quickly get this unit on 2 meters putting
out around 500 watts. It has built in power supply for those not
familiar with this unit. It is a favorite amongst vhf contesters. I
want $275 + shipping. Check it out

Hello Jay,

Is the Waters compressor you have the one called "Com-Preamp"??? and is it the small gray box with a screwdriver adjust pot in the front with micropone jacks on the back???. Uses 9v battery??

Would be interested if this is the same as I had several years ago.

Have for sale a Heathkit model HP-20 utility power supply which is currently wired for Swan type tranceivers. Has 11pin plug on power supply and Jones type connector on the other. Can be easily re-wired for whatever radio you may have. Clearly marked voltages arounf 11 pin octal plug. Has 600Vdc, 300Vcd, 150Vdc, bias and filament supplies. Very similar to the later version HP-23. Can be used on Heath, Drake Collins, Swan etc. Unit is in good working order and looks good also. $60.00 plus $6.50 for shipping.

Well, not being telepathic, I cannot see what they are as far as asbestos is
concerned :-)
My S-38 has nothing like that in it, and it is the Canadian version, so it
would have all the insulation going (CSA you know). There are lots of 'fish
paper' insulators to isolate the chassis from the cabinet but nothing thick,
like you describe.

2287. FS: Sams, low as $1.25 ea ppd

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-03 00:00:00 UTC
From: vintel@aol.com
Message-ID: <19981103111103.24029.00002544@ng81.aol.com>
Source record: 95532

FS: Sams Photofacts as low as $1.25 ea. ppd.
I'm way over stocked on some Sams Photofacts sets & I want to get rid of them.
The following prices apply until the excess Sams are all gone.
In quantity they are ONLY $1.25 per SET (per SET, not per folder). This price
INCLUDES SHIPPING in the 48 states.

For a list of available numbers please visit my web site at
http://www.vintage-electronics.com
click on "Schematics" & check out the RED SALE SECTION down near the bottom of
the page.
While visiting the site you may also find a radio or two that you'd like to
have among the few hundred sets that are listed. Also have some tube audio
equipment, communications gear, test equip, vintage tubes (Also have a 50% OFF
sale on some overstocked tubes) & other collectible electronics.
Thanks
John

Hrmmm, checks parity errors in memory...

That would be 1967. My dad and I made the trip down to Henry Radio
When they were alongside the freeway and you had to drive through a
pretty "interesting" neighborhood to get to thier parking lot.

After checking out the used equipment on the shelves, we bought a
Hammarlund HQ-110 receiver, a Heathkit DX-20 and a new 4-BTV trapped
vertical antenna. I sat and stared at my equipment for a couple of
months. Scared to death to actually get on the air and operate.

After getting the "word" from my dad, "Either make a contact or it
all goes back to the store..." I finally screwed up the courage to make
my first contact. That was it. I was hooked. I spent many an evening
working fellow novices on 40 meters in the southwest United States.

I met someone on the air that ended up being my Elmer for the next 10
years or so. Helping me to get my General and Advanced class license and
helping me get started with a carreer in electronics.

A tip-o-the-hat to Roland Peebles for getting me started with a Novice
license and to Dave Mills for helping me to upgrade.

After 30 years on the air, I gathered up another HQ-110, DX-20 and
BC-453
and made it a point to work someone on Straight Key Night last year. And
a nod to W6FU for the QSO New Years Eve.

Sometime back in the early 70's I got involved with RTTY. And in the
early
80's get sucked into Packet radio. Shortly afterwards the "net". I still
get on the air, and make it a point to help those who ask. Part of
returning
the help I received when I was getting started and along the way.

73 es GM from Jeff

Bonjour cher om
Le probleme de votre 940 est bien connu !!
Lorsque vous avez ce genre de probleme cela veut dire que votre PLL n'est
pas verouille donc il est incapable de se caler en reception et en emission.
Ne vous inquiete pas votre 940 n'est pas mort hi!!!
il suffit simplement de refaire toutes les soudures sur la platine PLL unit
qui se trouve de memoire presque au dessus du hp.Mais vous auriez tant qu'a
faire refaire egalement les autres soudures des platines car malheureusement
cela est son seul defaut

2305. Tube VHF amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-03 00:00:00 UTC
From: Warren Stone <warren@sprint.ca>
Message-ID: <363F93B1.ECCE7A1B@sprint.ca>
Source record: 95550

I've got a VHF amplifier which uses a pair of 4-125 tubes. It was formerly used on the 2M amateur band. It is a commercially built amp, rack mountable, with design very similar to an article in QST for November 1955. A low pass filter is attached to the chassis. To complete the amp it needs a bottom and back cover, as well as a power supply. According to the ARRL handbook it could be capable of 1kW input power with as little as 5W of drive.

What would something like this be worth? I'm trying to clean out the basement and raise some needed dollars for another project.

Email warren@sprint.ca for other info.

2306. FS Very Nice Henry TEMPO 2001 Amp

Newsgroup: rec.radio.amateur.boatanchors

Source record: 95551

I have for sale a VERY VERY Nice Henry Radio Tempo 2001 amplifier.
Its a table top amplfier that weighs about 45 lbs. It uses a pair of
8874 tubes. The condition is very nice, and wired for 110 volts. I had
it on 20 meters the other night and it was cruising at 800 watts. The
lights were also flickering while I was talking. The front panel is
excellent. It has a very nice chrome knob for the Tune control. It
also has this neat Power Output light that moves are you are
transmitting. The band switch positions are also real cool.
10, 15, 20, 40 F, 40 CW, 75 F, 80 CW. Its quite, and runs great with
copy of manual, and schematic.

$475.00 plus shipping .....Leo KJ6HI Ph/Fax (310) 670-6969

Source record: 95552

Hi all,

I have just obtained a rather rough RCA AR-77E receiver and wish to restore it. I have several questions.

(1) Do you know whether it was painted with RCA umber-gray colors (they look like brown and gray)? Mine has been painted black-wrinkle top and bottom with a gray band in the middle. BTW, I know of a source of lacquer RCA color paint.

(2) Did RCA always use pointer-type knobs for many of the controls on this receiver? Mine has no pointer knobs, but is equipped with fluted knobs of a unique design. The smaller knobs are fluted with contoured pointers. The crystal phasing and bfo control knobs are fluted with metal calibrated skirts. Could these be original? BTW, two of the smaller knobs are missing as is the knob for the antenna tuner. What does the knob for the antenna tuner look like?

(3) The back and bottom panels are missing. What do they look like?

(4) I have searched using Alta-Vista, but the only picture I have come up with is from a magazine advertisement. Does anyone have a color picture of this receiver posted on Internet?

Thank you!

Do you have a S-38 or S-389A, B, C etc. Each model is slightly different, but none had lining above the main chassis. The sets do tend to howl if the volume is turned up too far and the material you describe may have been installed by a former owner in an attempt to stop acoustic feedback.

Some models did have an asbestos pad affixed to the the bottom panel of the set. Apparently a model or two caught fire by igniting the fibre bottom panel.

They are great radios for what they are!

Does anyone know what Hallicrafters made this for? It is a HI-LOW battery charger approx. 4-1/2" x 3-1/2" x 6-1/2".

I'm not a Hallicrafters collector so I will sell this for $30.00 plus shipping.

With LM2578-adj you can do.

See www.national.com (search for lm2587). You can download a software that projects the power switch for you, with schematics too.

Incentive licensing is what almost shut the ARRL down. It was one of
the most stupid things ever promoted by the ARRL. I am not a memeber
nor will ever be..

Steve W4LW yes, I am extra class WITHOUT any ARRL help!!!

And those phone segments were allocated at the expense of the General Class ops also. There weren't any new bands or segments allocated, they just parcelled up the ones that were there. General Class ops found their privs severely restricted.

As I remember, Incentive Licensing was way more controversial even than SSB was...

Parting an SX110, some good stuff on it. Knobs are gone, except dial knobs, has S meter, good chrome bar and slide rule dial. (slide rule dial looks same as S108 type) Power transformer looks ok, should fit several Halis from the 50s and 60s. Front panel has some rust along bottom. Bandswitch, and coil section appear OK. Let me know what you need.

I don't know who or what you are, but a historian you are NOT. The FCC--you know, that entity that regulates the electromagnetic spectrum in the USA- first proposed Incentive Licensing in 1959-about the time you were eleven years old. The ARRL entered the scene as it always has--as the advocate for hams, and most of the details of the plan that was adopted came from the FCC, *NOT* the ARRL. In fact, ARRL persuaded FCC to drop succeding phases which would have caused even more pain to some hams. But it gives you a good excuse to inaccurately bash the League, and complain, to say nothing about braying your license class about. If you held a pre-Incentive extra, and that seems unlikely, you had one of some 4,000 then issued. Most were held by commercial CW operators, and there was no real reason for mainstream hams to concern themselves, after all there was NOTHING to be gained except the "prestige". And for most people "bragging rights" are worth what they apppear to be worth--not much.

So stay away from the ARRL-- they'll continue to work for the best interests of all hams anyway, you included--if they can figure out what those interests are, given all the garbage being spread these days.

Source record: 95610

I have two jobs. One of those jobs, I deal with customers during the spring, summer, and fall months. The other job, which is just a job for this Christmas season, is in a retail electronics store. I have found in both jobs, well, I knew this before, but this all proved it even more, is that many people are quite STUPID in their way of thinking. I have seen many people rip on Radio Shack salespeople. Yes, in many cases the sales associate is an idiot, but most of the time, it's a matter of the way a customer is asking for something, but they don't know what they want. You would not believe some of the situations I have been in. Some people ask for something, and they don't even know what that something is supposed to do. All they know is that it hooks onto a computer or something somewhere!!!

Oh well, I'll quit my rambling. My point is, obviously, many people are going to be quite wrong in their judgements of eBay. It does not surprise me. Some people just don't take the time to think something through or just need a tad bit of common sense.

I guess this is just more of a bitching session for me, but it feels good to get this off my chest.

Thank you,
Christopher Zeman, KB9RHA

The bottom panel is metal. There's a little carboard panel on the bottom,
however, covering a few access holes for alignment, warning owner that
removing it will void the warranty.

Thanks.

There's more evidence. If you search eBay for what other auctions, if
any, those suspicious (0) feedback bidders may have bid on, you'll find
that most had no other bids on file (past or present)...at a time when
one or two other KWM-2As were up for bid at lesser amounts (including
one with a 312B-5). It would also be unusual for so many first-time
bidders to ante up for such a big-ticket item (even if its value were
anywhere near where the bids were).

Bottom line: don't believe for an instant that a half-dozen people
thought that unit was worth nearly 2 grand.

With bids such as these submitted by "shills" (or by the seller himself), does it not make the auction process rather meaningless? Legitimate bids which were properly submitted by others would have been a waste of their time, would they not? The item might as well have not been "For Auction", since nobody has an honest opportunity to buy it.

2333. FORSALE - MINT Kenwood TS-520S + VFO-520S, great starter rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-04 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <71qa0r$gr@nntpb.cb.lucent.com>
Source record: 95460
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S plus the optional matching remote
VFO-520S that I would like to sell. In my opinion, the 520
and 520S are some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
The remote VFO is a wonderful option to have and gives
the capability to either run split frequencies or to flip-flop
between two frequencies.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $400 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

In my experience, the vast majority of eBay auctions are legit. It's
only those few that gather attention (like this thread) and make
bystanders feel that all of eBay is bogus.

Well you pegged this one on the money guys. If you took a good look at that radio it was a converted KWM 2A. The white markings over the exiter and PA tuning knobs were the thin white stripes called "eyebrows" and it is a winged emblem rig besides. The KM2 A has the wide eyebrows so this was a converted KWM 2. Now this same seller has an SM-2 with "minor scratches" (Fort sale) on auction at e-bay at around $500, yeah..right! if it isn't shill bidding then it's absolutely AMAZING!! heh heh

It certainly does reward effort and achievement! And because our society is plagued with creeping socialism, we see more and more criticism of individual efforts. Honest effort usually leads to success. Success provides a sharp contrast and visibility between effort and the lack thereof.

The divisiveness of achievement is generated by the envy of the under achievers!

Discriminatory? Only in the minds of the under achievers.
Claiming discrimination is a self serving way of excusing and
covering an absence of effort. This is particularly so when the
same requirement set is applied equally to all.

I was first licensed in 1962 (or was it '63?) as WN9ETW. My station was comprised of a Knight T-50 transmitter (6AG7/807/5U4 -- pi-net, would load into anything but a dead short), a National NC-105 receiver and a 40 m dipole at 35 feet. I later added an RME DB-20 "preselector" to pep up the NC-105 (especially on 15 m), and a Heathkit "Twoer" and Telrex 8-element yagi (rotated by the "armstrong" method).

My first QSO was on 40 with a YL -- WN8ETY -- near Detroit. Novices were, of course, rock bound then. I hung out at 7.176 and 7.184. I can't recall the freq. of my single 15 m XTAL (it was the near the bottom of the solar cycle then, so pickin's on 15 were pretty slim anyway).

Two meter AM was fun. I clearly remember my first experience with tropo using the ol' "Benton Harbor Lunchbox."

I still have the Twoer, and dearly wish I hadn't sold off the rest of the old shack. Maybe someday I'll go looking for the missing pieces.

I hold an Advanced ticket now and have the usual array of goodies. Yet somehow there was a bit more "magic" in the old gear and shack, a bit more mystery, challenge and uncertainty. But, the old Novice ticket was only good for one year and was not renewable; you moved up or out. Those of us who stuck with the hobby necessarily moved up and -- with that -- things changed forever.

The memories are pretty durable, though ...

73,

Mark -- WA9ETW

I vote in the primary. I vote to get rid of the weasels.

I never vote in a general election. After the primary, I don't
really care who wins. If your candidate loses the primary,
it really doesn't matter who wins. Jack-Ass or GOP, they both
are part of the 5 Trillion dollar problem.

In Oregon, you don't have to vote anyway, as the candidates
are already elected before the polls open.

I, too, was first licensed in 1964 (WNï¿½KSR). My first rig was a homebrew transmitter consisting of a 5763 oscillator stage with a 6146 final - xtal controlled of course. Built it from a QST article circa 1961. For a receiver I started with a National SW-54 using the vfo from a BC-458 as an external BFO. Even had a homebrew antenna tuner. The tuner had no case so there was lots of rf in the shack. Used to stand a florescent light bulb next to it. Looked great when operating cw with the flashing light!
When I got a little money saved up, I made a trek up to Council Bluffs, Iowa and bought a Globe Scout 680A from Leo Meyerson (founder of Globe, Galaxy, and World Radio Laboratories). Matched that up with a Hammarlund HQ-110A. Thought I had the dream setup then!
When I upgraded to Tech in 1965, I picked up a Heathkit Twoer (was even the ARES net control station with that for awhile) and a Lafayette HE45b for 6 meter AM.
Managed to work Puerto Rico on 6 meter meteor scatter running 10 watts once back then!.
The gear back then was pretty primitive, but it sure was fun!

Wayne, KEï¿½BZ

1964 must have been a prolific year for novices. I was also licensed in 1964 as WN3DNC after being an SWL for about 4 years using my father's Hammarlund Comet Pro superhet receiver with plug in coils. Did a lot of listening on 75 and 40 and managed to do some BCL dxing with it and a 30 foot wire antenna. I still have the Comet Pro.

I was licensed at the end of 64 and received as a Christmas present a Hallicrafter's
SX110 purchased from the Sears cataolg. After using the Comet Pro, this was heaven. As soon as my licensed arrived, my father and I paid a visit to a store in the Philadelphia area called "Ham"Burguer. After chatting with the owner I left with a Heath DX40 and about 8 novice band crystals. I also orderd a Heath Twoer kit from their catalog at about the same time.

I knew nothing about TR relays, so I strung up 30 feet of wire for the DX40 running opposite the 30 feet I had up for the SX110 and used the standby switch on the receiver when I was transmitting. My CW moniter was a transister AM radio which would generate a beat note on various frequencies whenever I transmitted. I knew nothing of coax feed and just plugged the end of the 30 foot wire into the center of the the SO239 on the DX40. I could never get it to tune up the way the manual said it should, so I just manipulated the tuning until I had about 100 Ma of plate current when the key was down. I had no idea where I was transmitting and called CQ on and off for almost a month on 80 meters and never heard a reply. I did receive an OO report and a FCC notice that I was being heard on 7.428 Mc.

After getting the FCC notice, I decided that I needed some help and located a ham who lived a few miles from our house. He showed me how to make a dipole and handle coax cable. Walked me through the tuning procedure for the DX40 and he also helped me with the Twoer and fashioned an old TV antenna to function on two meters. After putting up the dipole, I began to make contacts. I worked him
every night on two meter phone.

The DX40 turned out to be a pretty good transmitter and I used it on phone when I got my General, and added 6 meters to it after reading a how to in 73 magazine. The SX110 with the crystal filter was not a bad receiver and it eventually served as a tuneable IF for 6, 2, and 432mhz converters. I think they were both gone by 1967.

I have several Collins 208U-3 3 Kw 2-30Mhz RF Amplifiers. These are in good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce 3Kw PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3ph power and the room one of these superb Amplifiers would make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $3000.00
Untested with a tested and guaranteed 4CX3000A $3,500.00
Tested and Guaranteed 100% complete $4,500.00

crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

If you need more info please contact me.

>licensed ham could eat that bit about there being empty HF bands
>simply beggars belief.

Not to mention the part about their Bird Termaline antenna. Last time
I looked, a Termaline was designed as a dummy load, and really wouldn't
be expected to radiate well at all. (But the SWR should be excellent!).

I expect the original author intended it as a satire on the "more worthy"
hams who have passed a high-speed code test but are a little short on
technical knowledge.

I recently picked up a supply of some nice speakers from Nebraska Surplus
but they come with a switch which changes the impedance via a transformer
from about 250 to 5000 ohms. I am thinking of taking out the transformer and
replacing it with a radio shack 70.7 volt line transformer and I would like
to change the switch to a combination on/off switch with a volume control.
The speaker itself is a very nice University Audio unit at 8 ohms. Does
anyone have a general idea of what might work as a good volume control
potentiometer? That is what value would be approiate?

I wouldn't assume you have any priorities at all, and apparently you don't. If you want an education, go to college. Carping about a system that puts reasonable limits on the number of users without resorting to the numerical quotas and cash auctions that the FCC uses for other services, is a waste of time.

And for the record, demonstrating the operating skills to get 5BDXCC IS a meaningful accomplishment. More meaningful than demonstrating "keyboard diarrhea" on an NG!

It's interesting how some equipment has held it's value. At the local hamfest two weeks ago, someone was sitting at a table with two of the Lunchboxes, I didn't check but assume one would have been for siz and the other for two, and maybe one or two other items. The way it wsa presented, with no clutter, gave me the impression that he had built them and kept them all these years. Each of them had a fifty dollar price tag on them. Isn't that about the price they were originally (or maybe I'm forgetting and they were actually cheaper)?

A couple of tables down, someone was trying to sell an IC-22 (the original, which used crystals) for $75 dollars.

> bought bigger and better rigs?

For me, definitely. I got started in the tail end of the tube era, and after a long layoff to play and then work in computers I gave it another try -- very sterile, nothing like I remembered. Luckily, my mom then did something great for me (though at the time I thought it was a tragedy!). After years of storing my "junque" in her garage my family and I were finally settled in our home and I drove over one day to get the junque. Well, turns out she had put it all out on the curb a few months before, assuming I'd never come back for it! Boxes of tubes and parts, a perfectly good HR-10B (!!!), Tek scope (!!!), etc, etc. After not thinking much about it all those years, the loss of all that stuff ate at me, until I started noticing similar junque here and there, and on the net, and well....

For me it's the sight and the smell of a tube radio, either open or through the perforated cabinet. There's truly magic in those orange spots and shining bottles. Can't wait to get settled into our *next* house next month where I get my own radio room! Then my new boxes of junque will get turned into new magic.

73,
Mike, KK6GM

Ah hell, why not...

My experience with eBay has been (mostly) positive. The items I sell, usually, are things that had little current worth to me. For instance...I auctioned off some camera lenses that have been on my shelf for several years. I got rid of the camera, long ago. After tiring of moving them from spot to spot, I put them on eBay. Granted, I got nowhere near the prices I paid for them (in 1977) but, I got SOMETHING for them. It wasn't a "total" loss.

I have had some good buys on eBay as well. The AC line voltage monitor I picked up for $4 + shipping. No, not an AC voltmeter you plug in the wall, a unit with an RS-232 output and modem that monitors line voltage, and frequency for single or 3 phase systems. Granted, it's 80's technology but the current units go for around a grand!

And then, of course, are the folks who refuse to us eBay and sell their stuff, directly in these newsgroups. Although the prices may be reasonable, you still run many of the other risks inherent on eBay. Plus, you don't get eBay's popularity ratings system on the newsgroup...

Ok, off my soapbox...NEXT!

Radio Randy

Looks like I stirred up a hornet's nest!! :-) Incentive Licensing
should be what the word meant-incentive-to give. But it was taken
away. I am not alone, this was a very bitter pill for a lot of general
class licensees to take. Oh well, it is all over now so I guess it
doesnt really matter anymore!
I appreciate all the comments! Thank you!!

The answer is, NOTHING is wrong with incentive licensing if you were licensed after it went into effect. It provides a smooth entry into Ham Radio and a clear upgrade path to increase your skills and operating priveleges.

I went through the system, having been licensed in 1976 at age 15 as a novice, and now an Advanced class, still enjoying every minute of my ham radio experience. I operate mostly CW and CLOVER.

I personnally think it was a good idea.

2384. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <71or84$lj7@news.Hawaii.Edu>
Source record: 95628
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)
```

Anyone at the Syracuse Univ ham club WA2SDY (at least that was its
call back in the 1970's), assuming the logs weren't tossed, should be
able to find an entry describing my first ever contact sometime
in october 1976 on a Novice freq, operating Wx2QMS or such call.

You guys had a Heathkit SB101 at the time.....

Now, now, I thought it would be a really big list fromthe many pointers given
in this group, I wasn't being
sarcastic, look at my statement above... :-)
I think it is great to have such a 'crystal exchange',
I have myself many hundred different xtals in different
cases, some from butchered equipment and some
new for homebrew projects ordered with slightly wrong specs,
I believe every homebrewer knows how it goes..
Btw, anyone with xtals in the European 80m CW band for sale
(3500-3550KHz preferably)?
Someday I will take the time to make a list of all the ones I have
and post here.

Stein

How does one discover that (or any other) auction was "stuffed with shill bids"? (tho I suppose $2000 for a KWM-2A is a pretty good clue!)

Anytime a suspicious majority of bidders have 0 feedback ratings, it is
safe to assume they're shill accounts set up for the purpose of bidding
up the price on an item. In the case of the KWM2A auction, it couldn't
be more obvious.

> licensing?

The problem is that it rewards effort and achievement, and that concept is elitist, divisive and discriminatory and it has destroyed amateur radio. The plain fact that the HF bands in general, and the higher class allocations in particular, are now deserted and in imminent danger of being lost because of disuse, is all the proof anyone could need of how badly this system has worked. No matter which way I beam my Bird Termaline antenna I just never hear anyone on any more. I thought that maybe I had used too much DX grease on it because, although the SWR is brilliant, there is now a large stain on my desk. But that's dumb, you can never use too much DX grease.

You got a point there John. One other thing to consider, and that is that after bidding up the auction and just selling it back to himself, he still has a rather large bill to pay to eBay. If my math is correct that auction of selling it back to him self should have cost him $40.44

I'm auctioning this Edison collection for a friend.
Follow the link below for pictures and descriptions.
Please send any technical questions to Mark Chang at
mwchang@engr.ucdavis.edu.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=39477516

3-piece EDISON "Voicewriter" Wax Cylinder
Recording/Playback/Shaving System

The complete EDIPHONE office set, as was employed in state-of-the-art law offices in the late 1930's including 8 original Edison wax recording cylinders, most with hairline cracks but still usable in original soft-lined cartons. Recording unit comes with the original ceramic microphone (functionally restored) as shown and has a vacuum tube audio amplifier built-in to the unit which drives a ceramic recording stylus which etches the wax cylinder. The playback unit is similar to the recording unit except that it has a playback stylus and a mechanical sounding diaphragm to which a horn or earphone (not included) is connected. The cylinder shaver ("Master Shaver") is used to shave the surface of used or damaged cylinders in order to make them rewriteable. It functions like a small lathe. All three units feature very sturdy heavy-duty construction and have easy and intuitive stainless steel ergonomic controls which are characteristic of early shop equipment. Fractional horsepower Edison universal AC-DC electric motors are employed in all three units and all motors were cleaned and lubricated three years ago. The recording and playback units use adjustable flyball governors which stabilize the rotational speed of the cylinders. Fine pitch worm drives are used in each unit for steady stylus tracking. All three units can be brought to working order after the following repairs are performed: the paper sounding diaphragm on the playback unit is torn and should be replaced or rebuilt; the ceramic stylus on the recording unit is also internally damaged and needs to be replaced; the shaver needs a new shaving bit (which was originally a sliver of glass). All three units have the original paint and silkscreening which show signs of age.

Thanks, Reinhard

By joining the ARRL, you can't change anything. You will get a magazine
subscription.

ARRL membership are sheep. Just look at those in Director positions.
They are all in-bred.

You won't change anything, and all the sheep vote for the incumbent 99%
of the time (or don't vote at all). 1 vote means squat in the big picture.

Yes, fine, I have loads of both..The ones I want are the physically
bigger crystals, in HC6/U or FT243 case preferably.
They are better suited for valve transmitters, as some drive
quite hard current through the xtal, which cause smaller
HC/18 or /25 xtals to overheat and drift in frequency.
Anyone sell 'old rocks' in range 3.5-3.55MHz?

Wrong.

>You will get a magazine subscription.

Yes, that's one element of membership.

>ARRL membership are sheep. Just look at those in Director positions.
>They are all in-bred.

MOST volunteer organizations are the same when
it comes to getting VOLUNTEERS willing to put in
the time and effort needed for the position. I was national
president of a sports car club. I NEVER was opposed for
office AND my successor wasn't either.

>You won't change anything, and all the sheep vote for the incumbent 99%
>of the time (or don't vote at all). 1 vote means squat in the big picture.

That's the same bull that many people spout as to
why they don't vote in any election. The reality is that
every vote adds to the TOTAL and I've seen votes
as close as a handful that made the difference.

So I'll reiterate Marv, KC0EGB's post...

One positive note..... about the only positive note.... About
half of the sellers on ebay are not hams..... These are folks that
would not belong to this group or even know about boatanchors.
This does give ocassional availability to goodies that are rather
hard to locate. Sometimes at descent prices and sometimes at
ridiculous prices. When these guys dig up something out of Uncle
Bob's attic or buy at a flea market, at least we have a chance of
buying it. On the bad side, I could spend several pages....... you
all know what I mean.

Antique Electronic Supply has them in their 1998 catalog.
You can see their catalog at the following website.

www.tubesandmore.com

They don't come cheap. They show 36 bucks. This is of course only
one suggestion.

I have a few used tubes that I am probably never going to use. They all appear to be R.C.A.'s, labeled 872a, have mercury floating around inside them, have creamic tips on top, four pins on the bottom with small pins on the side to lock them in their ceramic base. The ceramic base has a small E.F. Johnson decal on it. They might be rectifiers for a transmitter, I am not sure. If you know what these are, or need these, email me at: nc183d@aol.com
Thanks,
nc183d

i hate the fact i have to have cw rammed down my throat when i do more public service communications than most people i know. heres my gripe..... what is cw? a MODE of communication correct? why dont we be fair and make people learn to be proficient in phone,packet, and atv? they are modes of communication arent they? the arrl said they polled many hams that were not arrl members. i have yet to meet one.

i agree 100%!! the mag sucks, arrl's response for the lousy mag is not a realistic one. i confronted evelyn gauzens with this same argument and the excuse was that that mag is part of the membership but not the basis. i asked arrl to give me qrx (aprox 8 pages) and keep their qst, they declined. they state that the mag must represent all hams (all hams must be into HF only). when questioned about the arrl's constant ramming of cw down everybodies throats she said it was what the membership choose. nobody wants our hf bands, everybody and their brother wants our vhf and up. it doesnt make sense..... maybe they're getting a kick back from large industry to look away...i dont know...

anybody want to start a new radio league that listens to the people it represents? i'm game! we need to get with the times. some of us just plain dont care to learn cw or work hf. what is so wrong with that? we should stop dwelling on trying to make everybody learn cw and follow the lead the europeans have established. their mentallity is we are all radio hobbyist, we all have diverse interest, we all can get along without putting each other down. even the cb'rs hang with the hams over there. whats the problem folk? all we're doing is hurting ourselves by putting each other down.

2410. 1938 Radio Handbook for trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-04 00:00:00 UTC
From: Mike Silva <mjsilva@jps.net>
Message-ID: <36409128.CC3@jps.net>
Source record: 95654

Hi all,

I've got an extra 1938 Radio Handbook (Jones/"Radio", not ARRL) in nice condition that I'd like to trade for something of similar vintage ('38 to '41 ARRL Handbook, '37 or '39 Radio Handbook, or ???). One odd thing about this book -- there are a couple of what appear to be old magazine line drawings of women taking baths pasted on the inside of the front cover. These are *very* tame, much more amusing than salacious. Actually makes an interesting conversation piece, but I suppose you could peel them off if you wanted to.

So, any trades?

73,
Mike, KK6GM

Because the incentive is only in the testing phase. A.T or after test, all hams pretty much are the same. IE: I feel exactly the same as an extra as I did as a general. I don't know any more as an extra than I did as a general except for the data I've consumed since upgrading. And I would have still consumed the same data as a general. I've been able to see no indication that incentive licensing has helped make more competant op's. All incentive licensing does is cut up the ham bands into silly little pieces. The general class bands stay packed, and the higher class bands generally stay pretty unused. So you have a lopsided and fairly stupid way of using spectrum space. I'm an extra here, but almost NEVER use my allocated extra band space. I hang out in the general bands with the people I've talked to for years. I bet plenty of other extras do the same. So what you end up with is 85% of the people crammed into the general bands and the advanced bands get a slimmer use, and the extra bands a dead zone nearly except for the cw bands. Overall a silly way to use the spectrum. They should just open the bands up wide open and let people go where they want. Would be a more even use of the bands and ease the incentive bottlenecking. MK

There's nothing wrong with an incentive licensing scheme that rewards technical merit. There is much wrong with an incentive licensing scheme that rewards the ability to chirp like an insect at the expense of technical merit. The sooner the ARS starts rewarding technical merit, the sooner ham radio will recover from the present unfortunate anti-technology attitudes.

I have a DX-60B Transmitter for sale. Works but needs some cleaning up. Cabinet needs painting. I put all brand new caps in it today and put it on the air. With a new 6146(not included) it put out 60watts. The old one that's in it is a bit weak. Someone out there can put together a nice AM-CW exciter with a bit of TLC. $75+shipping.

> 73, Cecil, W6RCA

Too late. The majority of hams now are non-technical types. Aside from small weekend projects most don't build equipment. Most can't work on the microscopic computer boards in modern radios, and have to send them in to be fixed like a broken TV. The tide has been turning for years and there is little hope of reversing it. Ham radio is fast becoming a communicators hobby.

Both of you should go back and read again the response that I made to the original post. A philosophical assertion was made in the first sentence of the original post and I responded only to it. The balance of his post failed under its own weight and technical merit and needed no response.

Bill Clinton was elected the first time because of H. Ross Perot! Perot took about 18% mostly Republicans who would have voted for Bush if they didn't have Perot to give their vote to so... nobody got a majority of the vote. And that was the cry of the Republicans for the next year "he doesn't have a mandate!"

Source record: 95413

FOR SALE BY PRIVATE PARTY;

Quantity 10, Amperite 3TF4 ballast tubes.
T 6 1/2 glass bottle, standard 9-pin minature base.
Guaranteed New Old Stock

This is a ï¿½current regulating resistorï¿½ (it says so on the box). Some are in red, white, and black Amperite boxes, some are in JAN boxes.

I experimented with a couple to find out how well they ï¿½regulate currentï¿½, and I was impressed with the degree of regulation. These provide a relatively ï¿½constantï¿½ current of around 300 mA.

Tube dealers are selling these for as much $10 each (check out the online tube sellers and see for yourself). Iï¿½m selling all 10 as a lot for $75, and Iï¿½ll pay First Class Shipping (prepay by money order, continental US 48 only, please).

Respond by email if interested,
Tom Mitchell

I got started in 1958 at the age of 13. My first rg was a Heathkit DX-40 and a Hammarlund HQ-100. I had a 125' long wire and a 15 Meter dipole. The call back then was KN9PFV in Floyd Knobs, Indiana. Sure would like for someone to find one of my old QSLs, copy it and send it to me. I later moved to Louisville, Ky and became W4RXU had moved to Tech and had a Johnson 6 N 2 modulated by an Eico modulator and a HB power supply. The HQ-100 worked great with an Ameco 6 meter converter. Good memories, I guess that is why they call them the good old days.

Sometimes we forget, it is a hobby that requires some knowledge, and some skill in the morse code. The morse code is a international requirment and may be around for some time to come.

To be a ham is something that can't truly be justified by passing any test. Anybody can learn electronics, morse code, computers, programing, cooking or whatever. To be a ham requires passing some tests that is true, but also a good heart felt love for the hobbie.

Don't label them all shills! The $510.00 bid on the SM-2 mic is from Japan - I think the Collins collectible fever is pretty high over there.

I personally saw a JA-individual peel off 11 new $100 bills at Dayton this year for a real good looking KWM-2 (not a 2A) - without power supply!

I hate to see this equipment go overseas, since it is removed from our circulation forever!

2446. Re: What radios did you start out with?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-05 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3641BFD1.5E8A@ix.netcom.com>
Source record: 95426

I started-out in Feb. of 1971 in north Louisiana.
When I was 13, I was showing lots of interest in
all things electronic. One day my daddy brought home
a small stack of books, bound with a paper around the
middle of them. The package of books was called
"Gateway to Amateur Radio." Just after my 14th
birthday, I received my novice ticket.

I couldn't afford to buy a rig or crystal right then,
but I did have lots of junk parts to trade.
I'd was constantly combing the woods looking
for a place where someone had dumped their household junk.
I was constantly dragging-home moldering televisions
and radios to strip for junk-box fodder.
I traded a bunch of power transformers for a rig.

My first "dit" on the air was an "ARC-5" BC-459
transmitter with this huge, haywired supply I built.
I've been in love with Command Sets ever since.
It was fun, but the a couple of other novices made fun of
how my "crystal" seemed to drift a little bit ;-).

My matching receiver was a Hallicrafters S-120.
All of 40-meters was about 1/8th inch on the dial.
You heard the whole novice band at once.

My dad gave me this huge double knife switch to
switch my antenna. It looked like you could
switch Hoover Dam's generators with it.

A couple of weeks later, I got "legal" with a crystal
controlled Globe Scout 680A. I only had one crystal- 7167.
That was before they moved the band.
Only rich kids had more then a couple of crystals
(The REALLY rich kids had an HW-16).

All our receivers were really broad, so it didn't matter
much that we were "crystal-poor."
If you wanted a contact, you didn't call "CQ."
You tapped "DIT....DIDIDIT...DIT," and wayyyyyy
off up the band you'd hear this really high-pitched
"DIT DIT!" Then you zero-beated the guy and you
had a QSO. You usually knew who it was by the
frequency and the fist. We all knew every novice
within about 150 miles. I had a map of Louisiana,
east Texas and south Arkansas. I would stick pins in

it, just like on "CONTACT." Then one day, I worked Ohio!!! I still remember it. I was so excited I ran to get my dad. He helped me stick a pin way up near the ceiling, about where we thought Ohio ought to be :-). He didn't much care for pinholes in the wall, but this day he was all smiles. My dad.... boy, was I a lucky kid.

Hello, I have the following Amateur radio tubes for sale. All are NOS
in the original box unless stated otherwise. When possible, (some tubes
can only be tested in curcuit) tubes are tested with a Hickok TV-7D/U.
I have a vast amount of tested, miniature tubes for your recievers,
transmitters, test equipment, etc. at very reasonable prices. Also have
a pretty huge stock of all types of NOS tubes, please inquire about things
not appearing on any of my posts. I'm in the midst of learning how to
set up a website, perhaps in this life :o)... Shipping extra, runs only
3.00 and up, whatever the post office charges...insurance is only a buck
or so, depending on the market value for the particular item(s).
The large transmitter tubes have been checked via ohmmeter.
I will only shipped these fully insured.
Of course, i'll guarantee them to work properly, so PLEASE TEST CAREFULLY
IMMEDIATELY apon arrival, and if it doesn't do what you like, just send it
back right away for a prompt refund,(in original,shipped condition) less return

shipping charges. If defective, I'll absorb initial shipping costs.
Thanks,
if interested, drop me a line... 73's
Joe Pratt, Tubecntral@aol.com

2450. Radio more fun in the early days?

I would say have as much fun with radio these days as I ever did. Much the same magic and thrill is still there as when I was a Novice in the early '70s. I did drop out of ham radio for quite a few years, and got back into it in 1987.

It was a lot of fun again from 1987 to about 1995, at which time I started to get a bit bored. As much as I sometimes like the modern equipment, it seems there's something missing. In 1996, I rediscovered vacuum-tube rigs, and I have been enjoying ham radio very much since then. About 80% of my time is spent restoring, maintaining, and operating boatanchors, and I get a lot of satisfaction out of this activity. I do have some modern equipment, and it has its time and place, but I think I would be much less active in ham radio if it weren't for my boatanchors. They really help bring back the magic and excitement of my early ham radio days.

73,
Jeff, KC1MK

I got my Novice in 1971 at the age of 13. My parents bought me a Realistic DX-150A receiver several months before that, and then bought me a Heathkit HW-16 when I passed my Novice test. I really had a blast building that rig! I had a few crystals each for 80, 40, and 15 meters, and had a lot of fun as a Novice. My parents occasionally bought me Heathkit test equipment, which I very much enjoyed building and using.

I dropped out of ham radio when my Novice license expired, as I got more interested in other things (guitars and amps, stereo equipment, cars, and girls). I got back into ham radio in 1987, and have been thoroughly enjoying it pretty much since. A few years ago, I was started to get a bit bored, but I happened to buy a Drake 2B receiver at a hamfest, and the boatanchor bug bit me hard. Since then, my main interest has been restoring, maintaining, and operating vacuum-tube equipment. I have some modern equipment, and it does get some use, but I spend most of my ham radio time playing with my older equipment, mostly Drake and Collins. For me, the older equipment provides the real fun and challenge that keeps me interested in ham radio. When I'm using a nice old radio that I have restored and maintained myself, I get every bit as much enjoyment out of ham radio as I did in my Novice days.

73,
Jeff, KC1MK

Well, how about a Hallicrafters S-40B and a Viking Challenger.... summer
of '59! My Dad bought the first Viking Challenger kit available in the
DC area (Electronics Wholesalers... remember them?? Ray Avey???).

I have a friend who is quite the eBay advocate (gets into the discussion groups and so on), from whom I learned what shill-detection techniques I use. She tells me that eBay used to be more responsive to suspected nefarious activity reported by users. But lately they haven't been doing such a great job of policing the service.

It's a close call to make. Evidence of shilling is largely circumstantial unless you know the individuals involved and they admit to it. Plus with the ease of getting free e-mail accounts these days, it doesn't do much good for eBay to kick off a shill bidder who will reappear tomorrow with another address. So, the adage applies here: caveat bidder.

I made no statement about whether I liked it or not. As a matter

of fact, I was a General when the change occurred and I did not like it. Took me six months and two attempts to do, but I went right back to where I was operating before the change.

There is nothing "fair" about life. Play by the rules in place. If you don't like the rules, then work within the system to change them. Start an effort to implement the plan you propose. It will give me all kinds trouble and headaches. But you can be sure of one thing...I will face squarely ever challenge you put up;
and I will meet it! Thats how much I care about operating on ham radio.

Our opinion differences can be summed up nicely. Something happened to me that I did not like; but I got over it!

It was definatly more of a challange. No fancy digital read-outs.
No transceivers. Except for the pricey Collins and Drake equiptment,
which most of us could not afford, most rigs where not very sensitve
or or accurate. It was a common rule to stay away from the band
edges, since most receivers where only good to +- 5khz (kc then)
at best and drifted quite a bit. Sideband was quite new on HF
and (at least where I lived) no used at all on VHF.

I do admit that I sometimes romantisize "The Good Old Days", but
the reality was that most equipment was not very good.

The really neat thing was, that one could build and/or maintain
his or her own equipment and did not need to be well versed in
PLL and digital engineering.

Great reminiscences here.

I got my novice, WN4CIE, in 1966 at age 17. Didn't have much money at all, so I used a Heath GR64 general coverage reveiver. As I recall the kit cost me about $40 and was your basic as-simple-as-possible superhet with a regenerative IF stage for receiving CW and SSB. The transmitter was a hombrew, a single stage xtal controlled osc using a TV sweep tube, ran about 30 watts. I used to tune it up with a 60 watt light bulb connected to the output jack.

The antenna was a 40 meter dipole that was given to me by a fellow ham. He had cut and tuned it for a very low SWR in the novice band. I strung it above the roof of our house, which had a tin roof. I have no idea how that affected the antenna, but I managed to work 48 states with this setup. One of my most memorable QSOs was the night that I worked Hawaii on 40 (I was in Florida). Never did bag Alaska or Idaho.

What a lot of fun that was. Makes me wish I was 17 again. :-)

I eventually got my general as WB4FRH, and I let it expire after the first term of 5 years because of life changes and other things. That was 1972. I've just recently gotten back into amateur radio. A lot has changed, to be sure.

A couple of comments. First, the equipment of the "good old days" wasn't that bad. Yes, frequency measurement was a problem, but that is easily solved with modern technology. Overall, however, the old receivers and transmitters perform quite well. What is really fun is they are readily available, are not hard to repair and maintain, and modern test equipment (such as your fancy solid state transceiver as a frequency standard) is readily available. They can be made to perform as well, and they sound better than most modern transceivers. We have the best of both worlds!

Work with the older sets provides a good foundation to jump into the world of PLL and digital engineering. Not from the technology standpoint, unless one is completely alien to the analog world, but from the expectations standpoint. One knows what he is looking for.

Atlas 210X, November 1993.

My brother had abandoned the rig in my room a few years
earlier, and figured I'd be able to understand how the
lid came off and the 10 meter oscillator coils could
be adjusted. It took me a while....

About the time my Novice ticket came, I figured I should
put the coils back where they belonged.

The rig still has my old call stuck to its front, long
after it earned me WAS 40 phone.

I got my second rig a few days after the first VE test session
held in town -- a Kenwood TH-21AT 2 meter HT, one of the first
miniature handhelds. I don't know what was more fun -- the radio,
or riding my motorcycle back from the candy store in San Antonio
at 110 MPH, racing with Corvettes.

2461. How many tubes do you have??????????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-05 00:00:00 UTC
From: cccacutts@mindspring.com

Guys,

In doing an inventory of tubes that I have onhand for a hamfest this weekend, I have discovered that my tube count at home has reached 2205 tubes boxed and tested and around another 200 or so that are loose and need to be tested. I never thought that it was that many. I'm woundering what are some of the quantites that you keep onhand? Is this a small quantity compared to some that you guys have? Any good ideas on how you store these things? Any good uses for a compactron, like maybe selling them as fishing floats? Do you find yourself digging around boxes of loose tubes at hamfests? Have you ever bought old tube equipment that could never run again just to get the tubes that was in it?

Just thought I would ask.

I've never counted. Whenever I run across tubes that go in equipment I have, I pick them up, although I have ooodeles of them.

Most are loose or in bags in large boxes, by size. I wish I had the time to contact antique electronic supply and get empty boxes for them all...loose even in boxes that are never moved, I seem to loose a few.

Hello Dean OM,

I concur completely (what prudent person would not?).

When someone signs a letter "Me", that tells it all.

Effort and achievement lead to obvious differences, made very visible
to those who are unwilling to exert effort themselves. There is nothing
wrong with the word 'elite'. It is something to shoot for yourself!
This is the way it should always be, of course. Rewards always
rightfully belong to those who achieve, not those who don't. This
is stuff one learns when a small child, and is idiotic to question
as an adult, egad! Someone needs to Grow Up, it seems.

73,
Don, W6JL
